13 14 15 16 17 18	Abstract: This document is a high level overview of the Semantic Model defined by the PWG. This document briefly describes the semantic elements defined in various PWG documents and PWG documents submitted to the IETF. The Semantic Model also incorporates additions made by other groups addressing print systems. With every semantic element included a reference is provided to the document and section that details the semantic definition.		
19 20 21	The Semantic Model contains a high level description of the Actions that operate on the objects and attributes in the model. This document does not describe the mapping of the semantics onto a specific protocol or network environment.

71 About the IEEE-ISTO PWG

- 72 The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and
- 73 Technology Organization (ISTO) with member organizations including printer manufacturers, print
- server developers, operating system providers, network operating systems providers, network
- connectivity vendors, and print management application developers. The group is chartered to
- 76 make printers and the applications and operating systems supporting them work together better.
- All references to the PWG in this document implicitly mean "The Printer Working Group, a
 Program of the IEEE ISTO." In order to meet this objective, the PWG will document the results of
- their work as open standards that define print related protocols, interfaces, procedures and
- 80 conventions. Printer manufacturers and vendors of printer related software will benefit from the
- 81 interoperability provided by voluntary conformance to these standards.
- 82 In general, a PWG standard is a specification that is stable, well understood, and is technically
- 83 competent, has multiple, independent and interoperable implementations with substantial
- 84 operational experience, and enjoys significant public support.
- 85 For additional information regarding the Printer Working Group visit: <u>http://www.pwg.org</u>
- 86 87
- 88 Contact information:
- 89 PWG Semantic Model; Web Page: <u>http://www.pwg.org/sm/</u>
- 90 PWG Semantic ModelMailing List: <u>mailto:sm@pwg.org</u>
- 91 To subscribe to the Print Services mailing list, send the following email:
- 92 1) Send it to <u>mailto:majordomo@pwg.org</u>
- 93 2) Leave the subject line blank
- 94 3) Put the following two lines in the message body:
- 95 subscribe sm
- 96 end
- 97 Implementers of this specification are encouraged to join the PWG Semantic Model Mailing List in
- 98 order to participate in any discussions of clarifications or review of registration proposals for
- 99 additional semantic elements or values. Requests for additional semantic elements or values, for
- 100 inclusion in this specification, should be sent to the PWG Semantic Model Mailing list for
- 101 consideration.

217 **1** Introduction

218 This document is a high level overview of the Semantic Model defined by the PWG. This

219 document briefly describes the semantic elements defined in various PWG documents and PWG

220 documents submitted to the IETF. The Semantic Model also incorporates additions made by other

221 groups addressing print systems. With every semantic element included a reference is provided to

the document and section that details the semantic definition.

223 The Semantic Model contains a high level description of the Actions that operate on the objects and

224 Elements in the model. This document does not describe the mapping of the semantics onto a

225 specific protocol or network environment.

226 2 Terminology

Action	A request that a Print Client makes to an object to perform some activity. The object returns a response to the Print Client that contains some information about the effect of the action on the object.	
Data Class	A template for data describing an object and representing its state. Each Element in the data class represents a semantic element of the associated object.	
Document	An object containing descriptive and state information for a logical unit of information to be printed. The object may contain processing information. The document content is represented by a single data (e.g. PDL, image) file and contains Pages.	
Document Processing Elements	Document Elements supplied by the Print Client to direct the printing of a Document that the Printer copies to the Document. Examples: Copies, Finishings, Media, NumberUp.	
End User	A print client that has no special rights on the printer. The End User typically submits jobs. The End User is allowed to query the printer, jobs and documents and control jobs based on policy.	
Element	In this Document <i>element</i> is used to describe a characteristic of an object. (In XML an element is a construct that defines a component of an object.)	
Impression	Everything printed on a single side of a media	
Job	An object that represents the submission of work for the printer. It contains descriptive and state information as well as default Document Processing Elements. Jobs contain one or more Documents	
Job Description Elements	Job Elements supplied by the Print Client to describe the Job. Examples: JobName, RequestingUserName, JobRecipient	
Job Processing Elements	Job Elements supplied by the Print Client to direct the printing of the Job as a whole that the Printer copies to the Job. Examples: JobHoldUntil, JobPriority, JobCopies, JobFinishings.	
Object	A entity that instantiates a data class and implements the appropriate actions.	
Operator	A print client that has special rights on the printer. The Operator typically oversees the printer. The Operator is allowed to query and control the printer, jobs and documents based on site policy.	
MediaSheet	A sheet of paper, or other material, used for printing	
Page	A logical entity that represents the information contained on a single side of a sheet of media. Note that this is the electronic form and that multiple pages can be rendered into a single impression through N-Up printing	
PDL	(Page Description Language) A language that describes the content to be printed and how it	

Deleted: 6 Deleted: 30

Zehler, Hastings, Albright

<u>8/20</u>/03

Page 8 of 67

	will be laid out on a page (e.g. Adobe PostScript®, Hewlett Packard PCL®).
Print Client	An application or network entity that performs actions
Printer	An object that represents a printing device, set of printing devices, or a printing service and contains zero or more Jobs
Type 1 keyword	All the values are defined in the specification. Additional values require a new specification.
Type 2 keyword	An initial set of values is defined in the specification. This working group registers additional values after review. The initial versions of the specification will contain the values registered so far. After the specification is approved, this working group will register additional values after approval.
Type 3 keyword	An initial set of values is defined in the specification. Additional values are registered without working group review. The initial versions of the specification contain the values registered so far. After the specification is approved, this working group will register additional values without approval.

227

3 Model Overview 228

229 The Printer Working Group (PWG) has defined a simplified printing model. It represents printing

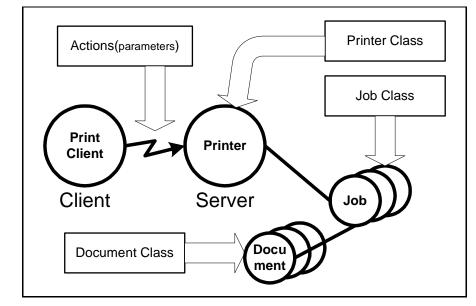

230 in either a client/server print paradigm or a peer-to-peer print paradigm. The PWG model describes

231 the device as a Printer object. A Printer object may represent one or more physical Printers.

232 Another object is the Job. A Printer can contain zero or more Jobs and a Job is contained in only

233 one Printer. Each Job can contain zero or more documents. A Job can contain zero or more

- 234 Documents and a Document is contained in only one Printer. The PWG model contains methods
- 235 that act upon these objects.

236

237

Figure 1 Model Overview

238 The objects are represented in the semantic model as data classes. The methods are represented as a 239 set of actions that act upon those data classes. The actions permit the creation and control of Jobs

Deleted: 6 Deleted: 30

Zehler, Hastings, Albright

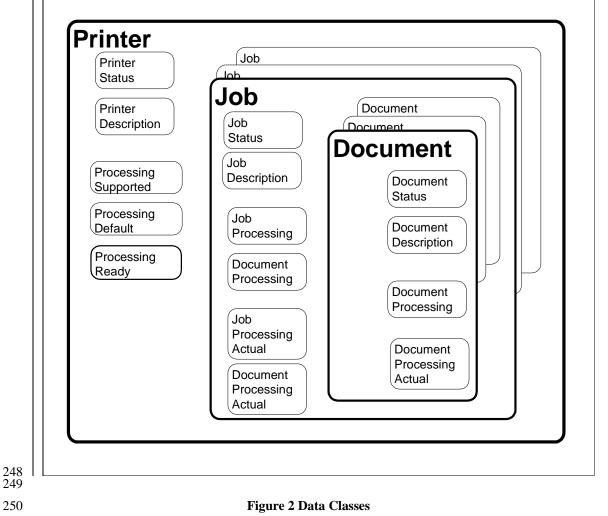

8/20/03

Page 9 of 67

- and documents as well as the submission of Document data. The content of a Document is
- 241 included in the submission or can be accessed via a URL reference. There are also actions to query
- a Printer, Job or Document to access their Elements or to list their contained objects.
- 243 The model uses a number of terms with specific meaning for a printer.

244 **4 Data Classes**

- 245 This section describes the data classes in the PWG semantic model. Some of the classes are taken
- from the model and semantics of IPP [rfc2911]. Figure 2 shows the data classes, their elements
- 247 and the containment relationship between the classes

Deleted: Shows

251 4.1 Naming of Classes, Elements and Values

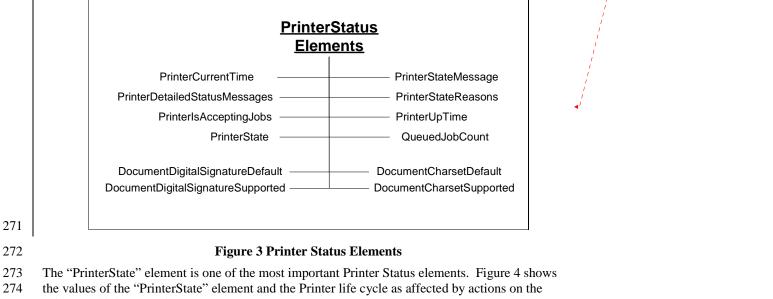

- 252 The Action, Class, Element and Value keywords are shown here with mixed case for readability.
- 253 For the purpose of matching, the case can be ignored. The names of clesses, elements and values
- 254 must differ by more than just case. For example there can not be two values for JobStateReasons 255 that differ only by case such as JobPrinting and jobprinting.
- 256 Specific mapping, of the Semantic Model, can mandate policy on case sensitivity. Mappings that
- 257 impose case sensitivity for matching, such as XML, may simplify their implementations.
- 258 Mappings that ignore case results in a server that will accept slightly malformed (i.e. case does not
- agree) requests. In either mapping, the keywords are semantically identical.

260 4.2 Printer Object Class

- 261 The Printer class is represented by a collection of elements as shown in Figure 2. The Printer
- Elements are presented in detail in Table 6. The printer object also contains elements that describe the valid processing element values. (See section 4.5 for processing elements) The Printer class is the container for Jobs.

265 **4.2.1 Printer Status Elements**

- 266 Figure 3 below shows the Printer Status Elements. These elements represent the state of the printer
- such as the number of jobs or existing error conditions. Automata change the values of the
- 268 elements in this group. End Users cannot directly modify their values. The End User can affect the
- 269 values of these elements through actions (e.g. PausePrinter can change the value of
- 270 PrinterIsAcceptingJobs"). The semantics of the elements are summarized in Table 6.

<u>8/20/</u>03 Page 11 of 67

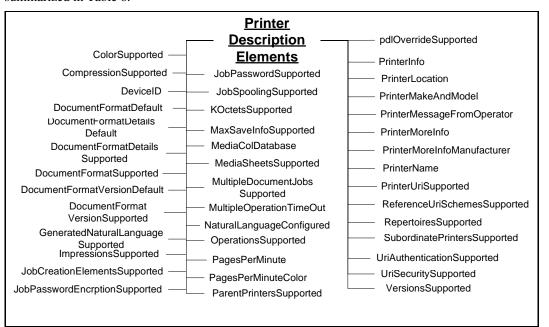

278

Figure 4 - The "PrinterState" element and the Printer Life Cycle

279 **4.2.2 Printer Description Elements**

Figure 5 below shows the Printer Description Elements. These elements contain information that
describes the printer such as its make, where it's located and its speed. An automaton controls
some of the elements in this group (e.g. "PagesPerMinute"). Others elements in this group can be
modified by Operators or Administrators (e.g. "PrinterName"). The semantics of the elements are
summarized in Table 6.

Zehler, Hastings, Albright

<u>8/20</u>/03

Page 12 of 67

4.2.3 Printer Defaults, Supported and Ready Processing Elements 288

- 289 See section 4.5 below for the elements that may comprise these groups. Processing Elements are
- 290 the union of Job Processing Elements and Document Processing Elements. If a Processing element
- 291 (e.g. Media) is supported, the Printer must have an associated Processing Supported Element (e.g.
- MediaSupported) and Processing Default Element (e.g. MediaDefault) Printer element. There may 292
- be an associated Processing Ready Element (e.g. MediaReady) Printer element. By retrieving the 293
- Printer Processing elements, a Client can determine all the Job and Document Processing elements 294
- 295 and values that may be used in creating Jobs and Documents.
- 296 All Processing Supported, Processing Ready and Processing Default Elements have an associated
- 297 Processing Element. There are Printer Description Elements with a "Supported" suffix (e.g.
- 298 ImpressionsSupported). While they do list the valid values for the base element (e.g. Impressions),
- they are not Processing Supported Elements. The difference is the containing group for the base 299
- element. Note that the Impressions element is a member of the Job and Document Description 300
- 301 groups.

302 4.2.3.1 Processing Supported Elements

- 303 These elements list all the currently configured valid values for each Job Processing Element and
- 304 Document Processing Element. Though the Printer is configured to support the feature, human
- intervention may be required to process the job (e.g. selected paper may have to be loaded into a 305 306 tray).
- 307 The syntax for Processing Elements Supported is multi-valued when the associated processing
- 308 element is a string. When syntax of the processing element is an integer, the syntax of the
- 309 corresponding Processing Supported Element is usually RangeOfInteger that indicates the
- minimum and maximum values supported by the Printer. However, there are some exceptions as 310
- indicated in Table 1. 311

312 Table 1-Integer syntax whose ProcessingElementSupported syntax isn't RangeOfInteger

"xxx" element name	"xxx" syntax	"xxxSupported" syntax
JobPriority	Integer	Integer (Max value)
Copies	Integer	Integer (Max value)
PageRanges	RangeOfInteger (Multivalued)	Boolean (are PageRanges supported)

4.2.3.2 Processing Default Elements 313

- These elements give the default value for the associated processing instruction if the Processing 314
- 315 Element of the job and document are not supplied and the instructions is not embedded in the PDL.
- 316 The syntax for the Processing Default Elements is the same as the corresponding Processing
- 317 Element. The only exception is that the PageRanges element does not have a PageRangesDefault 318 element.

Deleted: 6
Deleted: 30

Zehler, Hastings, Albright

8/20/03

Page 13 of 67

319 4.2.3.3 Processing Ready Elements

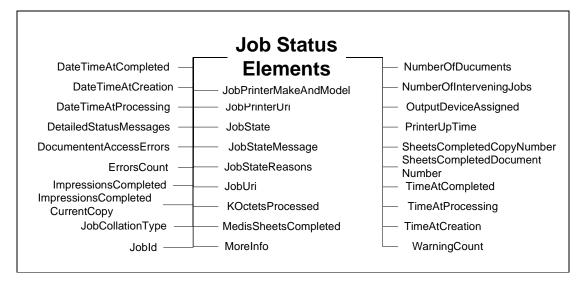

- 320 These elements give the features available without human intervention. The syntax for a
- 321 Processing Ready Element is the same as the corresponding Processing Element.

4.3 Job Object Class 322

- 323 The Job object class is represented by a collection of elements divided into six groups as shown in
- 324 Figure 2. The Job class also contains the document class
- Job Status Elements See Section 4.3.1 325
- 326 Job Description Elements – See section 4.3.2.
- Job Processing Elements See section 4.5.1 327
- 328 Document Processing Elements – See section 4.5.2
- 329 Job Processing Actual Elements - See section 4.6.1
- 330 Document Processing Actual Elements – See section 4.6.2

331 4.3.1 Job Status Elements

- 332 Figure 6 below shows the Job Status Elements. These elements reflect the status of the Job as a
- 333 whole. Automata primarily control the elements in this group. Clients cannot directly modify their
- 334 values. The Client can affect the values of these elements through actions (e.g. CancelJob can
- 335 change the value of JobStateReasons"). The semantics of the Job Status elements are summarized in Table 4.
- 336

Deleted: 6 Deleted: 30

4.3.1.1 The Job Life Cycle

- 342 The "JobState" element is one of the most important Job Status elements. Figure 7 shows the
- 343 values of the "JobState" element and the Job life cycle as affected by actions on the Job, Printer,
- and job processing.

345 346

347

Figure 7 The "JobState" Job Element and the Job object life cycle

348 **4.3.2 Job Description Elements**

349 Figure 8 below shows the Job Description Elements. These elements contain information supplied

350 by the Client at Job creation that describes the Job such as its name. The Printer may modify the

351 value of some of the elements in this group (e.g. "KOctets") if more reliable data is obtained. The

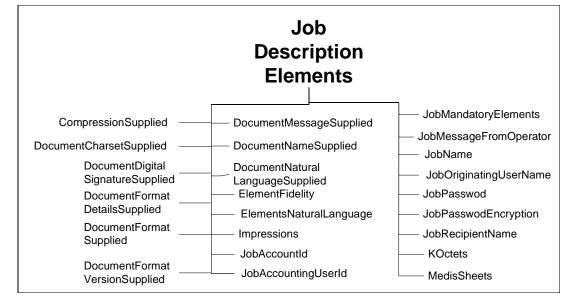

352 semantics of the Job Description elements are summarized in Table 4.

372

Figure 9 Document Status Elements

373 4.4.1.1 The Document Life Cycle

The "DocumentState" element is one of the most important Document Status Elements. Figure 10

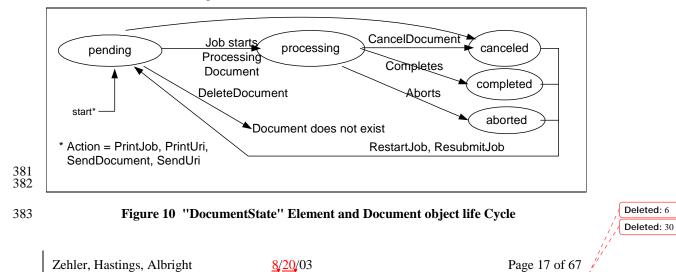

shows the values of the "DocumentState" element and the Document life cycle as affected by
Actions and job processing. Documents are not active objects and their life cycle is closely tied to

376 Actions and job processing. Documents are not active objects and their life cycle is closely tied to 377 the lifecycle of a Job. Documents basically have three states. The first is waiting to be processed

by a Job (i.e., pending). The second state is from the time the Job first starts processing the

379 Document (i.e., processing) and until it reaches its terminating state. The last state for a Document

380 is its terminal state (i.e., completed, canceled, aborted)

4.4.2 Document Description Elements 384

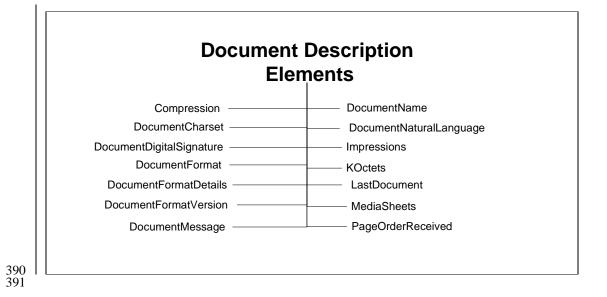

385 Figure 11 below shows the Document Description Elements. These elements contain information

386 supplied by the Client at Document creation that describes the document such as its size. The

387 Printer may modify the value of some of the elements in this group (e.g. "KOctets") if more

388 reliable data is obtained. The semantics of the Document Description elements are summarized in

389 Table 5.

392

Figure 11 Document Description Elements

4.5 Processing Elements 393

Processing elements are instructions that the Client supplies to the Printer to be applied to jobs and 394 documents. They indicate such things as the priority for scheduling a job or the number of copies 395 for a document. A Printer should support each Processing Element that represents a feature of the 396 397 Printer. The Processing elements are split into two groups. One groups applies to Jobs and the other to Documents. 398 399 1) Job Processing Elements are processing instructions applied the Job level. See section 400 4.5.1. 401 2) Document Processing Elements are specific to documents. See section 4.5.2.

402 4.5.1 Job Processing Elements

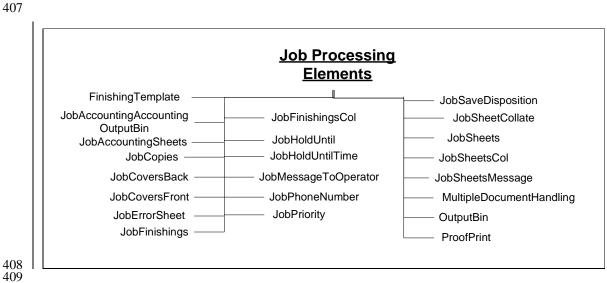

403 Figure 12 shows the Job Processing Elements. These elements define features supplied by the

- 404 Client at Job creation. The Printer applies these elements to the Job as a whole (e.g., "JobPriority")
- 405 as opposed to each document in the Job (e.g., "Media"). The semantics of the Job Processing
- 406 elements are summarized in Table 3.

Zehler, Hastings, Albright

8/20/03 Page 18 of 67

409

410

Figure 12 Job Processing Elements

4.5.2 Document Processing Elements 411

412 Figure 13 shows the Document Processing Elements. These elements define features supplied by

the Client at Document creation. The Printer applies these element to each Document individually 413

(e.g. "copies") to create final output products. Included in these elements is how multiple physical 414

415 sheets are manipulated or how the logical pages look on the output media or they determine the

416 quality and resolution of how marks are made on a page. The semantics of the Document

Processing elements are summarized in Table 3. 417

418 The Client supplies Document Processing Elements at the Job or Document level. If these

419 elements are supplied at the Job level, the Printer applies them as the default values for all the

Documents in the Job. If the elements are supplied at the Document level, the Printer applies them 420

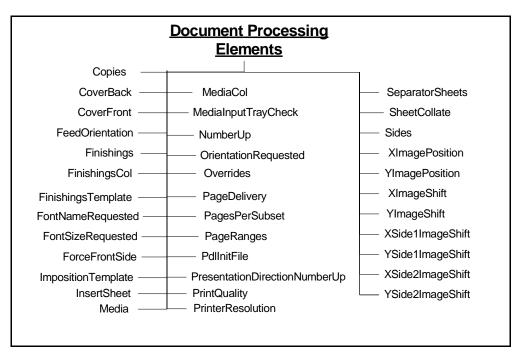

421 only to that Document.

PWG Semantic Model

422

423

Figure 13 Document Processing Elements

424 4.6 Processing Actual Elements

425 See section 4.5 above for the elements that may map to elements in these groups. The Processing

426 Actual elements are optional Job and Document element that records what processing elements

427 were used in a Job and its Documents. The mapping between the Processing element and the

428 Processing Actual element is by taking the Processing element name and appending the suffix

429 "Actual". The Processing Actual elements are always multivalued.

430 Any Processing element may have a related ProcessingActual element that shows what was applied

431 to the Job or Document. It is not necessary for the Printer to support the Processing element for it

432 to support the associated Processing Actual element. By retrieving the Printer Processing Actual

elements after a job completes, a Client can determine all the Job and Document Processingelements and values that were used in processing the Job and its Documents. (See [actual])

435 **4.6.1 Job Processing Actual Elements**

436 See section 4.5.1 above for the base elements that map to elements in this group. The Job

437 Processing Actual Element can only appear in the Job object.

438 **4.6.2 Document Processing Actual Elements**

439 See section 4.5.2 above for the base elements that map to elements in this group. The Document

440 Processing Actual Element can appear in the Job and Document objects.

441 **5 Actions**

- 442 The PWG has defined a number of operations that affect Printers, Jobs and their document. Below
- 443 is a description of the semantics of these Actions. Naturally different protocol bindings will use
- 444 differing subsets of the Actions or define new ones. Another difference will be the precise
- 445 parameters to the Actions. Below is an abstract definition of the Actions. Action Summary
- 446 The Print Service Interface [PSI] has introduced additional operations or PSI specific mappings of
- 447 existing actions. These are included below to show a concrete mapping of the PWG Semantic
- 448 Model and an application specific extension of the model. Consult the PSI specification [PSI] for
- the exact definitions.

450 This table summarizes the actions defined for the Job and Printer. The rest of section 5 provides

451 more details on the semantic of the actions.

Job Creation and Document submission	Job and Document Control	Status and Information access	Printer Control
CreateJob	CancelCurrentJob	GetDocumentElements	ActivatePrinter
PrintJob	CancelDocument	GetDocuments	DeactivatePrinter
PrintUri	CancelJob	GetJobElements	DisablePrinter
SendDocument	DeleteDocument	GetJobs	EnablePrinter
SendURI	HoldJob	GetPrinterElements	HoldNewJobs
ValidateDocument	PromoteJob	GetPrinterSettableElement Values	PausePrinter
ValidateJob	ReleaseJob		PausePrinterAfter CurrentJob
	ReprocessJob		PurgeJobs
	RestartJob		ReleaseHeldNew Jobs
	ResumeJob		RestartPrinter
	ScheduleJobAfter		ResumePrinter
	SetDocumentElements		SetPrinterElements
	SetJobElements		ShutdownPrinter
	SuspendCurrentJob		StartupPrinter

452

Table 2 - Summary of Actions

5.1 Job Creation and document submission Actions 453

- 454 This section describes the Job Creation actions that create a Job and the ones that create add
- 455 Document to a Job. The Job Creation actions are: PrintJob, PrintUri, and CreateJob. The PrintJob
- 456 action also submits the Document. The PrintUri action submits a URI reference to the Document
- 457 that the Printer then retrieves when needed at a later time. The CreateJob action only creates the job and the Client must issue subsequent SendDocument and SendUri actions in order to submit
- 458
- document content or a URI reference, respectively, for a job. 459
- 460 Processing instructions and descriptive information contained in the arguments of the Job Creation action are combined with Printer supplied information to create a Job instance. 461
- 462 The last action in this section is ValidateJob. This operation allows a Client to send a request with
- 463 all the information to create a Job, except the document content. The Printer does not create a Job 464 but informs the client whether a CreateJob, PrintJob or PrintUri with the same information would
- have succeeded. This is useful for allowing a Client to verify the processing instructions before 465 sending a large PrintJob request. 466
- 467 A concept that is important in the PWG model is a set of instructions that can be applied to a print
- job. Examples of these instructions include the number of copies and the media to use. These 468
- instructions are referred to as Processing Elements. The Processing Elements are made up of the 469
- 470 Job Processing Elements (see section 4.5.1) and the Document Processing Elements (see section
- 471 4.5.2) sent in a Job or Document Creation Action.

472 473

Figure 14 Processing Instruction Processing

474 In the real world, processing instructions are also contained in the document content for a job. 475 Page Description Languages (PDL) such as PostScript® and PCL® often contain processing

476 instructions. Some environments use a printer specific driver to generate the PDL stream based on

feature selections made through a user interface. Given that processing instructions can occur in 477

both the PDL and in an associated Job, the PWG model allows a Printer to declare its capability to 478

479 resolve this conflict. The Printer's element "PdIOverride" declares if an attempt will be made to

480 override the instructions in the PDL with the instructions in the Job.

There are a wide variety of capabilities in Printers. An instance of a Printer is to subject to changes 481 482 in its configured capabilities. An example would be an administrative change in the media the

Zehler, Hastings, Albright

8/20/03

Page 22 of 67

Deleted: 6	

Deleted: 30

- 483 Printer supports or disabling two-sided printing. Clients need not check the capabilities of a Printer
- 484 before creating their Job Processing Elements and submitting a job. Since this is a client/server
- 485 paradigm, it is always possible that the capabilities could change after checking a Printer's 486 capabilities and before a Job is submitted. On the other hand, a client may use the Printer's
- 486 capabilities and before a Job is submitted. On the other hand, a client may use the Print 487 configured capabilities to create their Job Processing Elements and submit a job.
- 488 The PWG model allows a client to control the Printer's acceptance of a job submission based on
- 489 the job request and the Printer's current configured capabilities as follows. When the client
- 490 supplies a 'true' value for the "ElementFidelity" Job Processing element, the Printer must reject the
- 491 job unless the Printer supports *all* of the supplied Job Processing elements and values. When the
- 492 client supplies a 'false' value or omits the element, the Printer must accept the job submission and
- 493 ignore or substitute elements and values, respectively, that it does not support. Note that the
- 494 "ElementFidelity" Job Processing element covers only the creation of the Job. It is implementation
- 495 specific how a Printer handles processing a job when the Printer encounters unsupported
- 496 processing instructions in the document content.

497 **5.1.1 CreateJob**

498 ([rfc2911] §3.2.4) Similar to the PrintJob operation (see section 5.1.3), except that in the CreateJob

- 499 request the Client does not supply Document Data. The client supplies a single set of Job
- 500 Processing elements that the Printer applies to the Output Document(s) of the job. The
- 501 "MultipleDocumentHandling" Job Processing element controls whether the Printer produces
- 502 separate Output Documents or combines the Input Documents into a single Output Document (see
- 503 section 24).

504 **5.1.2 CloseJob**

505 ([doc-obj] section 4.3) Closes a print job that was created with a CreateJob operation (see section

506 5.1.1) and one or more SendDocument and/or SendUri operations (see sections 5.1.5 and 5.1.6)

507 This action sets the LastDocument element (see section 4.4.2) of the last Document in the Job to

508 'true'. CloseJob is semantically equivalent to a SendDocument or SendUri action with the

- 509 LastDocument element set to True. An explicit CloseJob is preferable to the implied closing of a
- 510 Job using SendDocument or SendUri and the LastDocument element set to True.

511 5.1.3 PrintJob

- 512 ([rfc2911] §3.2.1) Submit a print job with only one document and supply the document content
- 513 data. If the Printer accepts the job, it creates the Job object and returns a unique "JobId" element
- 514 for the Printer and a globally unique "JobUri" element. The Printer also sets the corresponding Job
- 515 elements with these values.

516 **5.1.4 PrintUri**

- 517 ([rfc2911] §3.2.2) Identical to the PrintJob operation (see section 5.1.3) except that a client
- 518 supplies a URI reference to the document data.

Deleted: 6	
Deleted: 30	

Zehler, Hastings, Albright

<u>8/20/03</u> Page 23 of 67

519 5.1.4.1 The "MultipleDocumentHandling" Job Processing element

- 520 When a client submits a job with more than one Input Document, the
- 521 "MultipleDocumentHandling" Job element allows the client to specify whether the Printer is to (1)
- 522 produce corresponding separate Output Documents or (2) combine the Input Documents into a
- 523 single Output Document. For example, the 'single-document' and 'single-document-new-sheet'
- values allow the client to staple all of the Input Documents into a single Output Document, with the
- 525 latter value forcing each Input Document to start on a new sheet (useful when doing two-sided
- 526 printing). When requesting multiple Copies, the 'separate-document-uncollated-Copies' value
- results in the Copies of each Input Document being together in an Output set, while the 'separatedocument-collated-Copies' value keeps a copy of each Input Document together in an Output set.
- 529 For example, a job with Input Documents A, B, C and "Copies" = 2 will result in A, A, B, B, C, C
- 530 or A, B, C, A, B, C, respectively. If the Printer supports multiple documents per job, the Printer
- 531 must support this Job Processing element with at least one value.

532 5.1.5 SendDocument

- 533 ([rfc2911] §3.3.1, [doc-obj] §3) Submits the entire Document Content for the next Input Document
- 534 of a job created by a previous CreateJob action (see section 5.1.1).

535 **5.1.6 SendUri**

- 536 ([rfc2911] §3.3.2, [doc-obj] §3) Identical to the SendDocument operation (see section 5.1.5)
- 537 except that a client supplies a URI reference to the Document Content data, instead of supplying
- 538 the document content.

539 5.1.7 ValidateDocument

- 540 ([doc-obj] §3) This operation is used only to verify capabilities of a Printer object against whatever
- elements are supplied by the client in the ValidateDocument request. By using the
- ValidateDocument action a client can validate that an identical SendDocument or SendUri wouldbe accepted.

544 5.1.8 ValidateJob

- 545 ([rfc2911] §3.2.3) This operation is used only to verify capabilities of a Printer object against
- 546 whatever elements are supplied by the client in the ValidateJob request. By using the ValidateJob
- 547 action a client can validate that an identical PrintJob, PrintUri or CreateJob would be accepted.

548 5.2 Job and Document Control Actions

- 549 This section describes the actions that allow a client to control a Job after it has been submitted:
- 550 CancelJob, HoldJob, ReleaseJob, and RestartJob.

551 5.2.1 CancelCurrentJob

([admin-ops] §4.2) Allows a client to cancel the current Job in the "processing" or "processing-stopped" state.

Deleted: 6

Deleted: 30

Zehler, Hastings, Albright

<u>8/20/03</u> Page 24 of 67

554 5.2.2 CancelDocument

- 555 ([doc-obj] §3) Prevents the processing of the specified Document if the Document has not yet been
- 556 processed. Stops the processing of any active Document in an implementation specific manner.

557 5.2.3 CancelJob

558 ([rfc2911] §3.3.3) Allows a client to cancel a Print Job from the time the Job is created up to the time it is completed, canceled, or aborted. 559

560 5.2.4 DeleteDocument

561 ([doc-obj] §3) Removes the Document and its content from the Job.

562 5.2.5 HoldJob

([rfc2911] §3.3.5) Allows a client to hold a pending Job in the Printer so that it is not eligible for 563 564 scheduling.

5.2.6 PromoteJob 565

([admin-ops] §4.4.1) Allows a client to make the pending target job be processed after the current 566 567 job completes.

5.2.7 ReleaseJob 568

569 ([rfc2911] §3.3.6) Release a previously held Job so that it is again eligible for scheduling.

5.2.8 ReprocessJob 570

- 571 ([admin-ops] §4.1) Allows a client to re-process a copy of a job retained after processing was
- 572 completed. This operation is the similar to RestartJob except that a new job that is a copy of the
- target job is created and processed. 573

574 5.2.9 RestartJob

575 ([rfc2911] §3.3.7) Restart a job that is retained in the Printer after processing has completed.

576 5.2.10 ResumeJob

577 ([admin-ops] §4.3.2) Resume the job at the point where it was suspended.

5.2.11 **ScheduleJobAfter** 578

([admin-ops] §4.4.2) Request the target job be processed immediately after the specified job 579

580 5.2.12 **SetDocumentElements**

- ([doc-obj] §3) Set the values of the supplied Document Processing and Document Description 581
- elements of the indicated Document. (Was SetDocumentAttributes) 582

Zehler, Hastings, Albright

Page 25 of 67 8/20/03

Deleted: 6

Deleted: 30

583 **5.2.13 SetJobElements**

([rfc3380] §4.2) Set the values of the supplied Job Processing, Document Processing and Job
 Description elements of the indicated Job. (Was SetJobAttributes)

586 5.2.14 SuspendCurrentJob

587 ([admin-ops] §4.4.2) Stop the current job and allow other jobs to be processed instead.

588 5.3 Status and information Actions

- 589 This section describes the actions that allow a client to obtain status and elements of Jobs and
- 590 Printers: GetJobs, GetPrinterElements, GetJobElements and GetPrinterSupportedValues.

591 5.3.1 GetDocumentElements

- 592 ([doc-obj] §3) Returns the requested Document elements or element groups in the indicated
- 593 Document in the indicated Job. (Was GetDocumentAttributes)

594 5.3.2 GetDocuments

([doc-obj] §3) Returns the requested Document elements or element groups in all Documents inthe indicated Job.

597 5.3.3 GetJobElements

- 598 ([rfc2911] §3.3.4) Returns the values of the requested job elements and/or element groups of a Job
- 599 (i.e., Job Description, Job Status, Job Processing and Document Processing). (Was
- 600 GetJobAttributes)

601 **5.3.4 GetJobs**

- 602 ([rfc2911] §3.3.4) Retrieve the list of Jobs belonging to the Printer. The Client may supply some
- simple filters (e.g. "MyJobs, "Limit) to control which jobs will be returned. The Client may supply
 a list of Job element and/or element group names to be returned in the response (See 5.3.3). A
- 605 group of Job elements will be returned for each returned Job.

606 5.3.5 GetPrinterElements

- 607 ([rfc2911] §3.2.5) Returns the values of the requested printer elements and/or element groups of a
- 608 Printer (i.e. Printer Status, Printer Description, Processing Supported, Processing Default,
- 609 Processing Ready). (Was GetPrinterAttributes)

610 5.3.6 GetPrinterSettableElementValues

- 611 ([rfc3380] §4.3) Returns the possible values of each of the requested Printer Processing and Printer
- 612 Description elements that may be set with the SetPrinterElements action. (Was
- 613 GetPrinterSupportedValues)

614 5.4 Printer Control Actions

- 615 This section describes actions which allow a client to control a Printer and may require operator
- 616 credentials: PausePrinter, ResumePrinter, PurgeJobs, DisablePrinter, EnablePrinter, and
- 617 SetPrinterElements.

618 **5.4.1 ActivatePrinter**

- 619 ([admin-ops] §3.4.2) The Printer will now start sending jobs to its Output Devices or Subordinate
- 620 Printers and begin accepting all requests.

621 **5.4.2 DeactivatePrinter**

- 622 ([admin-ops] §3.4.1) The Printer will now stop sending any more jobs to its Output Devices or
- Subordinate Printers and begin refusing all requests except ActivatePrinter, SendDocument, and
 SendUri requests and query requests.

625 **5.4.3 DisablePrinter**

- 626 ([adm-ops] §3.1.1) Prevents the Printer from accepting any more Job Creation operations. The
- 627 Printer sets the PrinterIsAcceptingJobs Printer Status element to 'false'.

628 5.4.4 EnablePrinter

629 ([adm-ops] §3.1.2) Allows the Printer to start accepting Job Creation operations. The Printer sets
 630 the PrinterIsAcceptingJobs Printer Status element to 'true'.

631 5.4.5 HoldNewJobs

- 632 ([admin-ops] §3.3.1) Complete the current 'pending' and 'processing' Jobs but do not start
- 633 processing any subsequently created Jobs.

634 5.4.6 PausePrinter

635 ([rfc2911] §3.2.7) Stops the Printer object from scheduling jobs. Job processing should also cease.

636 5.4.7 PausePrinterAfterCurrentJob

637 ([admin-ops] §3.2.1) Stops the Printer from starting to send jobs to any of its Output Devices or638 Subordinate Printers.

639 **5.4.8 PurgeJobs**

640 ([rfc2911] §3.2.9) Removes all jobs from the Printer, regardless of their state.

641 **5.4.9 ReleaseHeldNewJobs**

642 ([admin-ops] §3.3.2) Undo the effect of HoldNewJobs and release all Jobs held as a consequence643 of HoldNewJobs.

Deleted: 6 Deleted: 30

Zehler, Hastings, Albright <u>8/20</u>/03 Page 27 of 67

644 **5.4.10 RestartPrinter**

645 ([admin-ops] §3.5.1) This action has the effect of a software re-boot.

646 **5.4.11 ResumePrinter**

647 ([rfc2911] §3.2.8) Resume the processing and scheduling of Jobs in the Printer.

648 **5.4.12 SetPrinterElements**

- 649 ([rfc3380] §4.1) Set the values of the supplied Printer Processing and Printer Description elements.
- 650 (Was SetPrinterAttributes)

651 **5.4.13 ShutdownPrinter**

([admin-ops] §3.5.2) Stop processing jobs without losing any jobs and make the Printer no longer
 available for any Actions.

654 **5.4.14 StartupPrinter**

([admin-ops] §3.5.3) Allows a hosted implementation of the Printer to be started after the host isavailable.

657 6 Globalization

658 The two aspects of globalization being addressed are the character sets and natural language of the 659 human readable strings. Determining what character set is being used is left up to the protocol 660 mapping of this semantic model. The natural language being used is represented in the Printer and 661 human readable strings. Determining what character set is being used is represented in the Printer and 662 human readable strings. The natural language being used is represented in the Printer and 663 human readable strings.

- 661 the Job. The Printer declares the natural language it uses for all its semantic elements of type 662 string. Administrators are free to change the localization and the values in the string elements.
- Each job creator declares the natural language for the Job and all its contained Documents. Not all
- 664 string elements are treated the same.

Any semantic element that is labeled type1, type2 or type3 keyword in the constraint column is the

- 666 following tables do not have any globalization issues from the Printer's point of view. They are 667 simply a sequence of octets that have a semantic meaning attached to them. The fact that the
- sequence of octets can be interpreted as ASCII strings is unimportant. The keywords are intended
- 669 for consumption by automata. We leave it to Client implementations to determine how the
- 670 keywords will be presented to end-users.

There are also strings with specific formats. These formats are URI, URI Scheme, MIME, IEEE
1284 and DateTime. Any semantic element whose string value must adhere to one of the previous

- 673 formats is excluded from this discussion.
- There are a few elements whose value is set by automata. Those values are "JobStateMessage",
- 675 "DocumentStateMessage" and "PrinterStateMessage". If the semantic model is mapped to a
- 676 protocol that allows the Client to request a language, the Printer will return these strings in the 677 requested language if possible.
- All the remaining Printer element strings are assumed to be in the Printer's language. All the remaining Job element strings are assumed to be in the language of the Job.

<u>8/20/03</u> Page 28 of 67

680 **7** Summary of elements

681 This section summarizes the elements for the Document, Job and Printer objects. Included in the 682 definition are the processing elements that can be applied at either the Job or Document level. For

683 each element, the tables contain the element name, whether the element is multi-valued, its syntax,

684 constraints, a short description and a reference to the Document where the semantics of the element

685 is completely specified. The basic syntax types are "Boolean", "String" and "Integer". "Complex"

types are a container for elements of any type. Members are listed in the description field.

687 "RangeOfInteger" is a complex type that contains "Upperbound" and "Lowerbound" integer value

members. "Resolution" is a complex type that contains "CrossFeedDir" and "FeedDir" integer

689 value members and a "Units" string value member.

Zehler, Hastings, Albright

<u>8/20/</u>03

Page 61 of 67

- 743 1/13/03 PJZ Expanded on Processing Actual Element, Incorporated comments from teleconference 744
- Fixed up status code tables. The DocumentProcessing subgroups were 745 11/1/02 PJZ merged into the DocumentProcessing element. Moved fidelity elements to JobDescription. 746 747 Finished incorporating Prod-Print2 and rfc3381 elements. Cross checked figures tables and 748 associated schema. Added -Actual extension.
- 749 10/28/02 PJZ "XML"ified attributes and object & added IPP mapping information 750 describing change. Completed adding [admin-ops], [PWG5100.1]. Rationalized "Pages" 751 and "PageRanges". Changed "State" groups to "Status" to avoid name collision with 752 "State" elements (e.g. "JobState")
- 753 TNH Fixed some Figure caption problems. Instead of deprecating 10/14/01 AttributeFidelity, made it work with JobMandatoryAttributes. Added way to specify the 754 755 member attribute in a collection attribute (Attr.Member). Clarified PagesPerSubset as combining all Input Documents into a single contiguous Input-Pages stream and then 756 757 subsetting it into Output Documents. Added GeneratedNaturalLanguageSupported from RFC 2911. 758
- 10/07/02 759 PJZ Updated references. Added JobCoverFront, JobCoverBack, and natural language elements. Reworked section 5.3.5 GetPrinterSettableAttributeValues. Corrected 760 761 Action table and section.
- 762 9/30/02 PIZ Began conversion of status string section to table. Corrected and updated 763 figures. Removed detailed IPP encoding section. Added globalization section
- 764 9/27/02 TNH Version 0.11: Spell checked, corrected some misspelled attribute names,. 765 Finished moving Compression and DocumentFormat from the Processing to the Document 766 Description tables. Improved the attributes descriptions, especially those that are related to 767 other attributes. Added the attributes and values from [prod-print2]. Added several 768 attributes from IPP documents that were missing for some reason. Corrected a number of 769 Maxlength values. Sorted the values of JobStateReasons, DocumentStateReasons, and PrinterStateReasons, so easier to keep track of. Add References: [adm-ops], [prod-print2]. 770
- 771 9/16/02 PJZ Added more definitions and document actions. Incorporated the comments 772 from teleconference and TH mail note. Updated references.
- 773 9/9/02 PJZ Final edits to ready document for review. Updated all figures and added highlighting of sections to review. 774
- Changes from email input and PWG meeting. Printer/Job/Document 775 9/1/02 PJZ 776 Attribute groups broken out into State and Description groups
- 777 8/16/02 Changed Content back to document, Added PWG5100.1, PWG5100.2, PJZ 778 PWG5100.3, PWG5100.4, job-progress to model. Filled out document object, added "Job 779 Level" subcategory to Processing attributes

780 781	6/17/02 trans	PJZ itions. Re	Added high level description of PWG Action semantics and Printer state eturned VersionsSupported and OperationsSupported.
782	6/4/02	SAA	Modified to split the Job Attributes into 3 categories:
783		1)	Processing Attributes
784		2)	Content Attributes
785		3)	Job Attributes
786			
787		The Pr	ocessing Attributes were further split into 3 subcategories:
788		1)	Rendering attributes
789		2)	Imposition Attributes
790		3)	Finishing Attributes
791 792			attributes from UPnP Print Basic service template: MediaSize, MediaType, Id attributes.
793 794 795 796		dictate For ex	ved references to Mandatory vs. Optional since a semantic model should not what is used or not used by the future solutions targeted at specific markets. ample, UPnP picked specific attributes for the SOHO market and did not need he Mandatory IPP attributes.
797		Modifi	ed Printer Description Attributes with the following:
798		1)	Added in DeviceId.
799		2)	Changed Document* to Content*.
800 801		3)	Removed VersionsSupported and OperationsSupported since these are dependent on the interface used in specific solutions.

13 Appendix A – UPnP Definitions

867 **13.1 DeviceId**

868The value of this variable MUST exactly match the IEEE 1284-2000 Device ID string, except the869length field MUST not be specified.. The value is assigned by the Printer vendor and MUST NOT

- 870 be localized by the Print Service.
- 871 The IEEE 1284-2000 Device ID is a length field followed by a case-sensitive string of ASCII
- 872 characters defining peripheral characteristics and/or capabilities. For the purposes of this

Deleted: 6 Deleted: 30

Zehler, Hastings, Albright

<u>8/20/03</u> Page 65 of 67

- specification, the length bytes MUST NOT be included. The Device ID sequence is composed of a 873 series of keys and values of the form: 874
- 875 key: value {,value} repeated for each key
- As indicated, each key will have one value, and MAY have more than one value. The minimum 876
- 877 necessary keys (case-sensitive) are MANUFACTURER, COMMAND SET, and MODEL. (These
- keys MAY be abbreviated as MFG, CMD, and MDL respectively.) Each implementation MUST 878
- 879 supply these three keys and possibly additional ones as well. Each key (and each value) is a string
- 880 of characters. Any characters except colon (:), comma (,), and semi-colon (;) MAY be included as
- 881 part of the key (or value) string. Any leading or trailing white space (SPACE[x'20'], TAB[x'09'],
- 882 VTAB[x'0B'], CR[x'0D'], NL[x'0A'], or FF[x'0C']) in the string is ignored by the parsing program
- 883 (but is still counted as part of the overall length of the sequence).
- 884 An example ID String, showing optional comment and active command set keys and their
- 885 associated values (the text is actually all on one line):
- 886
- 887 MANUFACTURER: ACME Manufacturing;
- 888 COMMAND SET: PCL, PJL, PS, XHTML-Print+xml;
- 889 MODEL:LaserBeam 9;
- 890 COMMENT: Anything you like;
- 891 ACTIVE COMMAND SET:PCL;
- 892

893 (See IEEE 1284-2000 clause 7.6)

- 894 Note: One of the purposes of the DeviceId variable is to select a printer driver for those clients that
- 895 need a printer driver. The values of the COMMAND SET key are interpreted by the printer driver provided by the vendor and so are vendor-defined, rather than being standardized. 896

14 Appendix B – IPP Mapping 897

14.1 Changes to remove some IPP specific aspects 898

899 This section lists some changes to remove some IPP specific aspects from the PWG Semantic 900 Model.

- 901 1. IPP enumerations use their well-known string name instead of the integer enumeration. 902 This applies not only to IPP attributes but also to IPP Operations.
- 903 2. Any IPP attribute name containing "ipp" has had the "ipp" removed.
- 904 3. All IPP attribute and operation keywords have the substring "attribute" replaced with 905 "element".
- 906 4. All IPP operation, status codes, attribute, and attribute value keyword names have had the 907 first letter capitalized and the '-' character removed and the character following the '-' has been capitalized. (All mixed case PWG Semantic Model keywords can be interpreted 908 909 without regard to case.)

Deleted: 6 Deleted: 30

Zehler, Hastings, Albright

Page 66 of 67 <u>8/20</u>/03

- 5. The IPP attribute value keywords defined in other registries remain unchanged. Note that
 the PWG defined media keyword values for the Semantic Elements MediaType,
 MediaColor, MediaSizeName and Media use the values as specified in PWG 5101.1.
- 6. The types of the attributes have been simplified. All keyword, text, name, DateTime, uri, UriScheme, enum and mimeMediaType types are represented by the simple string type. The "Constraint" column in section 7 clarifies the mapping of the string types in the Semantic Model to their original types (e.g. JobState type:string constraint: Type 1 keyword). Note that IPP Attributes of type Keyword or Name are represented as strings with a Type 2 or 3 keyword constraint
- 7. The "1setOf X" types are represented as the base type and the "Multivalued" field in the tables set to "Yes".
- 921 8. Integers and Boolean types remain the same.
- 922 9. Any applicable constraints placed on the attribute values has been noted in the tables.
- 923 The term "keyword" continues to be used for string values enumerated as part of the PWG Model.
- 924 The term "object" is sometimes changed to "data class". The term "operation" has been changed to 925 "action" to use the term more frequently used with XML.
- 926 The following IPP attributes are not included: operation-id, attributes-charset, request-id.

927 14.2 Attribute Group Mapping

- 928 IPP Actions may contain a number of parameters. The first parameter is always the Operation
- Attributes for the Action. The IPP Operation Attributes have been mapped to the Printer and JobDescription Element Groups.
- 931 The IPP Printer Description Attributes map to the PWG Printer Status Elements and Printer
- 932 Description Elements. The IPP Job Description Attributes map to the PWG Job Status Elements933 and Job Description Elements.
- 934 The IPP Job Template Attributes map to the PWG Job Processing Elements and Document
- 935 Processing Elements. IPP does not differentiate between the PWG Processing Elements subgroups
- 936 of Rendering, Imposition and Finishing Elements.
