

PWG IPP Printer State Extensions

Working Group Meeting

Conference Call Minutes

November 9, 2006

Meeting was called to order at approximately 12 a.m. EDT November 9, 2006.

Attendees

Ira McDonald	High North
Craig Whittle	Sharp
Ron Bergman	Ricoh

General Discussion

- The minutes from the face-to-face meeting in Lexington meeting were approved.
- Ira introduced the latest draft of the working document—see <ftp://ftp.pwg.org/pub/pwg/ipp/wd/wd-ippstate10-20061107.htm>
- Many of the ‘[[Editor’s notes remain unresolved to keep the document smaller.
- Michael Sweet created a change request (see <http://www.cups.org/str.php?L2088>) that will support the new keywords and add support for the printer-alert and printer-alert-description attributes. Once this is complete the specification can move to candidate standard.
- Ira indicated that other vendors (at least 4 or 5) have implemented the Finisher MIB including Xerox, Sharp, and Ricoh. This can be leveraged for the IPP-PSX implementation.
- Ira suggested a new printer / finisher / alerts “bake off” since. The interest and participation by vendors is timing critical (perhaps in 2007 after there are implementations in place).
- Ira re-forwarded the e-mail to UP3i announcing the latest revision of the IPP-PSX specification

Next Steps / Open Actions:

- Craig will send the latest specification to Sharp's BMLinKS representative and update him on the latest developments and plan
- Ron will review the specification
- Next teleconference tentatively scheduled for December or sooner if there are comments or questions.
