The Printer Working Group (PWG) Proposed Standard for The Internet Printing Protocol (IPP): Document Object

Version 0.5, October 25, 2002

Abstract: This IPP specification extends the IPP Model and Semantics [RFC2911] object model by defining a Document object. The [RFC2911] Job object is extended to contain one or more Document objects which are passive objects operated on by the Job. The Document object is created by the [RFC2911] Send-Document and Send-URI operations and represents an Input Document to the Job. This specification also adds a Document Attributes group (and tag) to these Send-Document and Send-URI requests. The Document Attributes group contains any Document Template attributes to be applied to this Document object being created, overriding any corresponding Job Template attribute supplied at the job level (including the "document-overrides" operation attributes at the Job or Document level). A new Create-Document operation allows a client to supply the Document Attributes without the data (like Create-Job does for a Job object). Then the client sends the data content to that Document object using the new Send-Data operation. The client can also supply Document Attributes with the existing Send-Document and Send-URI operations to create Document objects with content data or a document reference, respectively.

This specification also defines seven new operations for Document objects once they have been created: Cancel-Current-Document, Cancel-Document, Get-Document-Attributes, Get-Documents, Delete-Document, Set-Document-Attributes, and Validate-Document.

This specification also lists all of the attributes defined in other IPP specifications to show their relationship to corresponding attributes defined in this IPP specification for use with the Document object. The full semantics of the "document-state", "document-state-reasons", and "document-state-message" Document Description attributes are given along side of the corresponding [RFC2911] "job-state", "job-state-reasons", and "job-state-message" Job Description attributes.

The purpose for specifying the Document object is so that the print industry can have a common semantic specification for use in IPP, the PWG Semantic Model, the PWG Print Service Interface (PSI) project, and the Free Standards Group Job Ticket API which all have a Document object.

This version of the PWG Proposed Standard is available electronically at:

ftp://ftp.pwg.org/pub/pwg/ipp/new_DOC/pwg-ipp-document-object-v05-021025.pdf, .doc, .rtf

This document is an IEEE-ISTO PWG Proposed standard. For a definition of a "PWG Proposed Standard" and its transition to a "PWG Draft Standard", see: <ftp://ftp.pwg.org/pub/pwg/general/pwg-process.pdf>. After approval by the PWG (by a Last Call) to transition this Proposed Standard to a Draft Standard, an IEEE-ISTO number will be assigned and this PWG Draft Standard will be available electronically at:

<ftp://ftp.pwg.org/pub/pwg/standards/>

90 ways to produce, test, measure, purchase, market, or provide other goods and services related to its scope.

91

91 **About the IEEE-ISTO**

92

93 The IEEE-ISTO is a not-for-profit corporation offering industry groups an innovative and flexible operational forum
94 and support services. The IEEE-ISTO provides a forum not only to develop standards, but also to facilitate activities
95 that support the implementation and acceptance of standards in the marketplace. The organization is affiliated with
96 the IEEE (<http://www.ieee.org/>) and the IEEE Standards Association (<http://standards.ieee.org/>).

97

98 For additional information regarding the IEEE-ISTO and its industry programs visit <http://www.ieee-isto.org>.

99

100

101 **About the IEEE-ISTO PWG**

102 The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and Technology Organization
103 (ISTO) with member organizations including printer manufacturers, print server developers, operating system
104 providers, network operating systems providers, network connectivity vendors, and print management application
105 developers. The group is chartered to make printers and the applications and operating systems supporting them
106 work together better. All references to the PWG in this document implicitly mean "The Printer Working Group, a
107 Program of the IEEE ISTO." In order to meet this objective, the PWG will document the results of their work as open
108 standards that define print related protocols, interfaces, procedures and conventions. Printer manufacturers and
109 vendors of printer related software will benefit from the interoperability provided by voluntary conformance to these
110 standards.

111 In general, a PWG standard is a specification that is stable, well understood, and is technically competent, has
112 multiple, independent and interoperable implementations with substantial operational experience, and enjoys
113 significant public support.

114 For additional information regarding the Printer Working Group visit: <http://www.pwg.org>

115

116

117 **Contact information:**

118 IPP Web Page: <http://www.pwg.org/ipp/>

119 IPP Mailing List: ipp@pwg.org

120 To subscribe to the ipp mailing list, send the following email:

121 1) send it to majordomo@pwg.org

122 2) leave the subject line blank

123 3) put the following two lines in the message body:

124 subscribe ipp

125 end

126 Implementers of this specification are encouraged to join the IPP Mailing List in order to participate in any
127 discussions of clarifications or review of registration proposals for additional names. Requests for additional media
128 names, for inclusion in this specification, should be sent to the IPP Mailing list for consideration.

265

266

267 1 Introduction and Summary

268 This IPP specification extends the IPP Model and Semantics [RFC2911] object model by defining a Document
269 object. The [RFC2911] Job object is extended to contain one or more Document objects which are passive objects
270 operated on by the Job. The Document object is created by the [RFC2911] Send-Document and Send-URI
271 operations and represents an Input Document to the Job. This specification also adds a Document Attributes group
272 (and tag) to these Send-Document and Send-URI requests. The Document Attributes group contains any Document
273 Template attributes to be applied to this Document object being created, overriding any corresponding Job Template
274 attribute supplied at the job level (including the "document-overrides" operation attributes at the Job or Document
275 level). A new Create-Document operation allows a client to supply the Document Attributes without the data (like
276 Create-Job does for a Job object). Then the client can send the data content to that Document object using the new
277 Send-Data operation.

278 This specification also defines seven new operations for Document objects once they have been created: Cancel-
279 Current-Document, Cancel-Document, Get-Document-Attributes, Get-Documents, Delete-Document, Set-Document-
280 Attributes, and Validate-Document.

281 This specification also lists all of the attributes defined in other IPP specifications to show their relationship to
282 corresponding attributes defined in this IPP specification for use with the Document object. The full semantics of the
283 "document-state", "document-state-reasons", and "document-state-message" Document Description attributes are
284 given along side of the corresponding [RFC2911] "job-state", "job-state-reasons", and "job-state-message" Job
285 Description attributes.

286 The intent is to propose this specification as an IPP extension and which will be referenced as part of the PWG
287 Semantic Model. The purpose for specifying the Document object is so that the print industry can have a common
288 semantic specification for use in IPP, the PWG Semantic Model [pwg-sm], the PWG Print Service Interface (PSI)
289 project [pwg-psi], and the Free Standards Group Job Ticket API [fsg-jt] which all have a Document object.

290 1.1 Scope

291 Part of the extension is to allow the client to supply printing instructions, called Document Template attributes, when
292 creating each Document object. An IPP Printer object implementation MAY support most of the existing Job
293 Template attributes as Document Template attributes as well. (The PWG Semantic Model [pwg-sm] currently calls
294 the Job Template attributes and Document Template attributes simply "Job Processing" and "Document Processing"
295 attributes). Note: There are a number of footnotes which relate this IPP specification to the PWG Semantic model
296 and other PWG projects, such as the Print Service Interface (PSI) [pwg-psi].

297 The Document object is a passive object¹ and is operated upon by the Job. The client uses the new Create-
298 Document operation or either of the existing Send-Document and Send-URI operations to create a Document object.
299 In addition there are 8 new operations that affect the Document object after it has been created as summarized in
300 Table 1.

¹ The Document object is *not* a sub-job. If Job trees are desired where sub-jobs can be on different network nodes, such as in JDF, then a separate specification should be generated for Job trees.

301

Table 1 - List of Document operations

Operation Name	Printer support	Brief Description
Create-Document ²	REQUIRED	Creates a Document object with Document attributes, but no data.
Send-Data	REQUIRED	Sends data to the Document object created by Create-Document.
Send-Document *	REQUIRED	Creates a Document object with Document attributes and data.
Send-URI *	OPTIONAL	Creates a Document object with Document attributes and a URL reference to the data (print-by-reference).
Validate-Document	REQUIRED	Validate that the supplied Document attributes are supported.
Get-Document-Attributes	REQUIRED	Get requested attributes of specified Document in the specified Job.
Get-Documents	REQUIRED	Get requested attributes of all of the Documents in the specified Job.
Set-Document-Attributes	OPTIONAL	Set the supplied Document attributes on the specified Document.
Cancel-Document	REQUIRED	Cancel the specified Document in the specified Job, but don't remove it.
Cancel-Current-Document	OPTIONAL	Cancel the current document that the Printer is printing.
Delete-Document	OPTIONAL	Remove the specified Document object and its data from the Job.

302

303

304

305

306

* The existing IPP/1.1 operations defined in [RFC2911] with an extension so the client can supply Document Template attributes in a new attribute Group in the request. This specification also specifies the life cycle of the Document object by defining the "document-state", "document-state-reasons", and "document-state-message" attributes. Finally, the analogous Document Descriptions attributes that correspond to the Job Description attributes are defined.

307

2 Terminology

308

This section defines terminology used throughout this document.

309

2.1 Conformance Terminology

310

311

312

313

314

Capitalized terms, such as **MUST**, **MUST NOT**, **REQUIRED**, **SHOULD**, **SHOULD NOT**, **MAY**, **NEED NOT**, and **OPTIONAL**, have special meaning relating to conformance as defined in RFC 2119 [RFC2119] and [RFC2911] section 12.1. If an implementation supports the extension defined in this document, then these terms apply; otherwise, they do not. These terms define conformance to *this document (and [RFC2911]) only*; they do not affect conformance to other documents, unless explicitly stated otherwise. To be more specific:

315

316

317

318

319

REQUIRED - an adjective used to indicate that a conforming IPP Printer implementation **MUST** support the indicated operation, object, attribute, attribute value, status code, or out-of-band value in requests and responses. See [RFC2911] "Appendix A - Terminology for a definition of "support". *Since support of this entire Document Object specification is OPTIONAL for conformance to IPP/1.1, the use of the term REQUIRED in this document means "REQUIRED if this OPTIONAL Document Object specification is implemented"*.

320

321

322

323

324

RECOMMENDED - an adjective used to indicate that a conforming IPP Printer implementation is recommended to support the indicated operation, object, attribute, attribute value, status code, or out-of-band value in requests and responses. *Since support of this entire Document Object specification is OPTIONAL for conformance to IPP/1.1, the use of the term RECOMMENDED in this document means "RECOMMENDED if this OPTIONAL Document Object specification is implemented"*.

² The Create-Document operation maps to the PWG PSI Send-Document-By-Post operation and the Send-Data maps to the HTTP Post operation.

325 **OPTIONAL** - an adjective used to indicate that a conforming IPP Printer implementation MAY, but is NOT
326 REQUIRED to, support the indicated operation, object, attribute, attribute value, status code, or out-of-band value in
327 requests and responses.

328 2.2 Other Terminology

329 This document uses the same terminology as [RFC2911], such as “**client**”, “**Printer**”, “**attribute**”, “**attribute value**”,
330 “**keyword**”, “**Job Template attribute**”, “**Operation attribute**”, “**operation**”, “**request**”, “**response**”, and “**support**”
331 with the same meaning. In addition, the following terms are defined for use in this document:

332 **Document object** - the object to represent the logical concept of a document in a Job. A **Job object** can contain
333 one or more **Document objects**.

334 **Job Creation operation** - operations that create Job objects, specifically: Print-Job, Print-URI, and Create-Job as
335 defined in [RFC2911].

336 **Document Creation operation** - operations that create Document objects. Specifically: Create-Document, Print-
337 Job, Print-URI, Send-Document and Send-URI. Note: the Print-Job and Print-URI are both **Job Creation** and
338 **Document Creation** operations, since they create both Job and a **Document object** at the same time. Also this
339 specification does not extend the Print-Job and Print-URI operations. However, this specification does extend the
340 Send-Document and Send-URI operations to allow the client to supply **Document Template** attributes in each
341 request.

342 **Job Level** - attributes supplied in the Print-Job, Print-URI, and Create-Job are referred to as being supplied at the
343 **Job Level**. Attributes supplied at the **Job Level** are a mixture of **Job attributes** and **Document attributes**. **Job**
344 **attributes** apply to the Job as a whole, while **Document attributes** provide defaults for the **Document objects** in
345 case the client does not supply a **Document attribute** at the **Document Level** for a **Document object**. Put another
346 way, **Document objects** *inherit* **Document attributes** from the **Job object** which are used if the client didn't supply
347 a corresponding attribute for the **Document object**.

348 **Document Level** - attribute supplied in the Send-Document, Send-URI, and Create-Document operations are
349 referred to as being supplied at the **Document Level**. Note: attribute supplied in the Print-Job and Print-URI
350 requests are considered as being supplied at the **Job Level** only, *not* also at the **Document Level**, even though
351 Print-Job and Print-URI also create **Document objects**.

352 **Attribute Precedence** - the precedence rules which dictate which attribute value takes precedence when the same
353 attribute is supplied at different points in the work flow with different values, such as at both the **Job Level** and the
354 **Document Level**. See section 5.

355 **Job Attribute** - an **Operation attribute** or a **Job Template** attribute that applies to the Job (object) as a whole. For
356 example, “job-name” is an **Operation attribute** and “job-priority” is a **Job Template attribute**.

357 **Document Template attribute** - an attribute that the client supplies in a Create-Document, Send-Document, or
358 Send-URI operation request in the Document Attributes group. For example, “media”.

359 **Document attribute** - an **Operation attribute** or a **Document Template attribute** that applies to a **Document**
360 **object** as a whole. For example, “document-format” is an Operation attribute and “media” is a Document Template
361 attribute.

362 Table 2 shows this terminology as applied to the six operations. Note that Print-Job and Print-URI are both Job
363 Creation operations and Document Creation operations, though they only create single Document jobs. In other
364 words, for Print-Job and Print-URI, there is only one document per job, so whether the attributes are considered to be
365 submitted at the Job Level and then inherited by the Document object, is moot, since these operations do not have a

366 separate Document group in which the client can supply Document attributes. Note also that for the “Level” concept,
 367 no operation supplies attributes at more than one level.³

368 **Table 2 - Job Creation and Document Creation operations**

Job Creation operation	Document Creation operation	Operation	Attribute Group in Request		Level
			Job	Document	
yes		Create-Job	Job attributes and Document attributes		Job Level
yes	yes	Print-Job	Job attributes and Document attributes		
yes	yes	Print-URI	Job attributes and Document attributes		
	yes	Create-Document		Document attributes	Document Level
	yes	Send-Document		Document attributes	
	yes	Send-URI		Document attributes	

369

370 **Document Overrides** - a way for a client to specify attributes to apply to specified documents in a multi-document
 371 job. Specifically, as member attributes of the “document-overrides” **Job Template attribute** in a **Job Creation**
 372 operation or the “document-overrides” **operation attribute** in a **Document Creation operation** as defined in
 373 [override]. Note: The **Document Template attributes** supplied in a Create-Document, Send-Document, or Send-
 374 URI operation also “override” any Document Template attributes supplied in the Job Creation operation.

375 **3 Document Operations**

376 The Document object semantics are as parallel to the Job object semantics as possible. Therefore, most of the Job
 377 operations have analogous Document operations as shown in Table 14 in section “Appendix A: Document operations
 378 compared to Job operations”. Operations that can apply only to an entire job, have no analogous document
 379 operation as indicated. This extension adds 8 new Document operations that operate on the Document object once
 380 it is created by the new Create-Document operation or either of the existing two operations: Send-Document and
 381 Send-URI operations.

382 Note: By Document object we mean the object once it become a contained part of a Job object, not before or after.
 383 So in this specification a Document object does not represent data in a repository.

384 The signatures of the operation requests that create and/or validate Document objects are very similar as shown in
 385 Table 3 and defined in section 3.1 through section 3.5. The entries in the table show what a client MUST, MAY, or
 386 MUST NOT supply in the indicated operation requests.

³ The PWG Semantic Model [pwg-sm] calls the Operation attributes supplied by the client: Job Description attributes or Document Description attributes for the Job Creation and Document Creation operations, respectively. The [pwg-sm] also calls Job Template attributes and Document Template attributes: Job Processing and Document Processing attributes, respectively. Each Processing attribute is defined to be a Job Processing or a Document Processing attribute, but is not both. The client can supply both Job Processing and Document Processing attributes in a Job Creation operation, in which case the Document Processing attributes server as defaults for the Document objects. The Printer copies all of these client’s supplied attributes to the Job or Document object. Read-only Job and Document attributes that the system sets are called Job State and Document State attributes (instead of Description attributes).

387

Table 3 - Client-supplied Document Creation and Validation Request Signatures

	Create-Document	Send-Data	Send-Document	Send-URI	Validate-Document
Target job	MUST	MUST	MUST	MUST	MAY
"input-document-number"	MAY	MUST	MAY	MAY	MAY
"document-uri"	MUST NOT	MUST NOT	MUST NOT	MUST	MAY
Document Template attributes	MAY	MUST NOT	MAY	MAY	MAY
Data	MUST NOT	MUST	MUST	MUST NOT	MUST NOT

388

389 The entries in Table 4 show what a Printer MUST, MAY, or MUST not support and return in the indicated operations
 390 responses.

391

Table 4 - Printer-returned Document Creation and Validation Response Signatures

	Create-Document	Send-Data	Send-Document	Send-URI	Validate-Document
Status code/message	MUST	MUST	MUST	MUST	MUST
Unsupported Attributes	MUST, if any	MUST, if any	MUST, if any	MUST, if any	MUST, if any
Job status attributes	MUST	MUST	MUST	MUST	MUST NOT
Document status attributes:					
"document-number"	MUST	MUST	MUST	MUST	MUST NOT
"document-id-uri"	MUST	MUST	MUST	MUST	MUST NOT
"document-state"	MUST	MUST	MUST	MUST	MUST NOT
"document-state-reasons"	MUST	MUST	MUST	MUST	MUST NOT
"document-state-message"	MAY	MAY	MAY	MAY	MUST NOT

392

393 **3.1 Create-Document Operation**

394 This REQUIRED operation allows a client to create a Document object, supply Document attributes, and have the
 395 Printer validate those attributes without sending any document content data. If the Printer rejects the request, the
 396 client won't have sent the possibly time-consuming data. The client MUST perform the operations in the following
 397 order: (1) Create-Job to create the Job object, (2) Create-Document to create the Document object, (3) Send-Data
 398 (see section 3.2) to send the content data for the Document object.

399 The client can supply multiple documents for a single Job using pairs of Create-Document and Send-Data
 400 operations. The order of the corresponding Send-Data operations is not important, so that the client can send pairs
 401 of Create-Document and Send-Data operations or can send a number of Create-Document operations followed by
 402 the corresponding Send-Data operations. The latter approach is useful if the client wants to make sure that all
 403 Documents will be accepted by the Printer before sending any of the Document data to the Printer.

404 If a Printer supports the Document object, the Printer:

- 405 1. MUST also support the Create-Document and Send-Data operations
- 406 2. MUST support the "multiple-operation-time-out" Printer Description attribute (see [RFC2911] section 4.4.31).

- 407 3. MUST support the "multiple-document-jobs-supported" Printer Description attribute (see [RFC2911] section
408 4.4.16) with a 'true' value, that is the Printer MUST support multiple document jobs.
- 409 4. MUST support the "multiple-document-handling" Job Template job attribute with at least one value (see
410 [RFC2911] section 4.2.4) and the associated "multiple-document-handling-default" and "multiple-document-
411 handling-supported" Job Template Printer attributes (see [RFC2911] section 4.2).
- 412 5. MUST support the Attribute Precedence semantics specified in section 5 for the levels that the Printer
413 supports.

414 The Printer sets the value of the Document's "document-state" Document Description attribute to 'pending', if the
415 Printer accepts the Create-Document request. A Printer MAY set the 'job-data-insufficient' value of the Document's
416 "document-state-reason" Document Description attribute to indicate that processing cannot begin until sufficient data
417 has arrived and set the "document-state" to 'pending'. A non-spooling printer that doesn't implement the 'pending'
418 document state may even set the "document-state" to 'processing', even though there is not yet any data to process.
419 See sections 8.5 and 8.7.

420 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job
421 owner (as determined in the Create-Job operation) or an operator or administrator of the Printer object (see
422 [RFC2911] sections 1 and 8.5). Otherwise, the Printer MUST reject the operation and return: 'client-error-forbidden',
423 'client-error-not-authenticated', or 'client-error-not-authorized' as appropriate.

424 3.1.1 Create-Document Request

425 The client supplies the following groups as part of the Create-Document Request:

426 Group 1: Operation Attributes

427 **Natural Language and Character Set:**

428 First, the client MUST supply the "attributes-charset" and "attributes-natural-language" Operation attributes
429 as described in [RFC2911] section 3.1.4.1. The Printer object MUST copy these values to the corresponding
430 Job Description attributes described in [RFC2911] sections 4.3.19 and 4.3.20.

431 **Target:**

432 Next, the client MUST supply either (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri"
433 (uri) operation attribute(s) which define the target Job object for this operation as described in [RFC2911]
434 section 3.1.5. The client MAY supply the remaining Operation attributes in any order following:

435 **Requesting User Name:**

436 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in
437 [RFC2911] section 8.3.

438 3.1.1.1 input-document-number (integer(1:MAX)) operation attribute

439 The client MAY supply the "input-document-number" Operation attribute to indicate which Document object
440 in the Job to which this Create-Document request is to apply. If the Printer supports this attribute, the Printer
441 MUST also support the corresponding "document-number" (text(127)) Document Description attribute (see
442 section 8.1) and copy this value to the "document-number" Document Description attribute. Usually the
443 client omits this Operation attribute, so that the Printer assigns the next integer value starting at 1 for each
444 Job. A client that is creating multiple Document objects in parallel MAY wish to supply this attribute in order
445 to control the order of the Documents in the job. If supplied, the Printer MUST copy the value to the
446 Document object's "document-number" Document Description attribute. If the Job already contains a
447 Document with the same "document-number" value as the one supplied by this attribute, the Printer MUST

448 reject the request and return the 'client-error-client-error-conflicting-attributes (see [RFC2911] section
449 13.1.4.15) and the "input-document-number" and "document-number" attributes.

450 **3.1.1.2 last-document (boolean)** **operation attribute**

451 The client MUST supply this attribute (as in the Send-Document and Send-URI operation requests). The
452 Printer object MUST support this attribute. This attribute is a boolean flag that the client supplies with a 'true'
453 value if this is the last document for the Job, 'false' otherwise.

454 **3.1.1.3 document-message (text(127))** **operation attribute**

455 The client MAY supply this operation attribute. If the Printer supports this attribute, the Printer MUST also
456 support the corresponding "document-message" (text(127)) Document Description attribute (see section
457 8.10) and copy this value to the "document-message" Document Description attribute. The end user can use
458 this Document Description attribute as a message to the operator and the operator can use it as a message
459 to the user. The Printer MAY print this message on a document start sheet for this document, if any.

460 **3.1.1.4 Additional Operation attributes:**

461 Any of the other Operation attributes indicated in the "Level Supplied" column labeled with a "y" in the "Doc"
462 column in Table 6, such as "document-name" and "document-format". These operation attributes are said to
463 be supplied at the Document Level and apply to the Document object, overriding any operation attributes
464 supplied at the Job Level. For example, if "document-format" = 'application/postscript' at the Job Level and
465 "document-format" = 'text/plain' in this Create-Document request, this Document will be 'text/plain'. If the
466 next Create-Document request for this Job omits the "document-format" operation attribute, that Document
467 will be 'application/postscript'.

468 **Group 2: Document Template Attributes**

469 **Any Document Template attributes in any order:**

470 The client OPTIONALLY supplies a set of Document Template attributes, that is any attributes indicated in
471 Table 8 in the "Defined for use" column labeled with a "y" in the "D" column. These Document Template
472 attributes are said to be supplied at the Document Level and apply to the Document object, overriding any
473 Document Template attributes supplied at the Job Level. For example, if "media" = 'na-letter-white' at the
474 Job Level and "media" = 'na-letter-transparency' in this Create-Document request, this Document will be 'na-
475 letter-transparency'. If the next Create-Document operation for this Job omits the "media" operation attribute,
476 that Document will be 'na-letter-white' which it inherits from the Job.

477 If the client is not supplying any Document Template attributes in the request, the client SHOULD omit Group
478 2 rather than sending an empty group. However, a Printer object MUST be able to accept an empty group.

479 The client MUST NOT supply the document data in this operation request. See Send-Data operation.

480 **Group 3: Subscription Attributes (see [ntfy] section 11.1.3.1): MUST NOT be present. Notification is only at** 481 **the Job Level.**

482 In addition to the MANDATORY parameters required for every operation request (see [RFC2911]), the simplest
483 Create-Document request consists of just the "attributes-charset" and "attributes-natural-language" operation
484 attributes; either (1) the "printer-uri" target operation attribute and the "job-id" or (2) the "job-uri" and nothing else. In
485 this simple case, the Printer object:

486 - creates a new Document object and adds it to the specified Job object,

- 487 - assigns the lowest document number not yet used by this Job, if the client did not supply an "input-document-
488 number" operation attribute (see section 3.1.1.1). Copy the document number assigned or supplied to the
489 Document object's "document-number" Document Description attribute.
- 490 - stores a generated Document name in the "document-name" Document Description attribute in the natural
491 language and charset requested (see [RFC2911] section 3.1.4.1) (if those are supported, otherwise using
492 the Printer object's default natural language and charset), and
- 493 - at job processing time, uses its corresponding default value attributes for the supported Document Template
494 attributes that were (1) not supplied by the client as IPP attributes and (2) not embedded instructions in the
495 document data.

496 3.1.2 Create-Document Response

497 The Printer object MUST return the following sets of attributes to the client as part of the Create-Job response:

498 Group 1: Operation Attributes

499 Status Message:

500 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a
501 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described
502 in [RFC2911] sections 13 and 3.1.6.

503 The Printer MUST reject the operation:

504 If the client supplies the "ipp-attribute-fidelity" operation attribute (see section 6.2.1) with a 'true'
505 value and the client supplies any unsupported and/or conflicting Job Template or Document
506 Template attributes.

507 If the client omits or supplies the "ipp-attribute-fidelity" operation attribute (section 6.2.3) with a 'false'
508 value and supplies keyword values of the "document-mandatory-attributes" operation attribute that
509 are unsupported and/or conflicting.

510 Otherwise, the Printer MUST accept the operation and ignore or substitute unsupported and/or conflicting
511 attribute values supplied by the client. See the Implementer's Guide [RFC3196] for a complete description of
512 the suggested steps for processing the attributes in a create request.

513 Natural Language and Character Set:

514 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
515 3.1.4.2.

516 Group 2: Unsupported Attributes

517 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

518 The value of the "ipp-attribute-fidelity" and "document-mandatory-attributes" operation attributes supplied by
519 the client does not affect what attributes the Printer object returns in this group. The value of these two
520 operation attributes only affects whether the Create-Job operation is accepted or rejected. If the Document
521 is accepted, the client may query the Document object using the Get-Document-Attributes operation (see
522 section 3.5) requesting the unsupported attributes that were returned in the create response to see which
523 attributes were ignored (not stored on the Document object) and which attributes were stored with other
524 (substituted) values.

525 **Group 3: Job Object Attributes**

526 In addition, the Printer MUST return the same Job status attributes that [RFC2911] REQUIRES for the Send-
 527 Document and Send-URI operation responses (which are the same as for the Print-Job response -
 528 [RFC2911] section 3.2.1.2):

- 529 "job-uri" (uri) - see [RFC2911] section 4.3.1
- 530 "job-id" (integer(1:MAX)) - see [RFC2911] section 4.3.2
- 531 "job-state" (type1 enum) - see [RFC2911] section 4.3.7
- 532 "job-state-reasons" (1setOf type2 keyword) - see [RFC2911] section 4.3.8

533 The Printer MAY return:

- 535 "job-state-message" (text(MAX)) - see [RFC2911] section 4.3.9
- 536 "number-of-intervening-jobs" (integer(0:MAX)) - see [RFC2911] section 4.3.15

537 **Group 4: Document Object Attributes**

539 **3.1.2.1 document-number (integer(1:MAX)) Document Description attribute**

540 The Printer MUST return the document number of this Document object that was either assigned by the
 541 Printer (see section 3.1.1) or supplied by the client (see section 3.1.1.1).

542 **3.1.2.2 document-id-uri (uri) Document Description attribute**

543 The Printer MUST return the document id of this Document object as a URI as assigned by the Printer (see
 544 section 8.2).

545 **3.1.2.3 document-state (type1 enum) Document Description attribute**

546 The Printer MUST return the state of this Document object (see section 8.5).

547 **3.1.2.4 document-state-reasons (1setOf type2 keyword) Document Description attribute**

548 The Printer MUST return the associated state reasons for this Document (see section 8.7).

549 **3.1.2.5 document-state-message (text(MAX)) Document Description attribute**

550 The Printer MAY return the localized description of the "document-state" and "document-state-reasons"
 551 values for this Document (see section 8.9).

552 **3.2 Send-Data Operation**

553 This REQUIRED operation allows the client to create a Document object using the Create-Document operation (see
 554 section 3.1) that the Printer validates before the client sends any document content data. Then the client can skip
 555 sending the data to the Printer, if the Printer rejects the Document Creation operation.

556 Since the Create-Document and the Send-Data operation that follows could occur over an arbitrarily long period of
 557 time for a particular Document, a client MUST send the Send-Data operation within an IPP Printer defined minimum
 558 time interval after the receipt of the previous request for the job. If a Printer object supports the Document object, the
 559 Printer object MUST support the "multiple-operation-time-out" attribute (see [RFC2911] section 4.4.31). This
 560 attribute indicates the minimum number of seconds the Printer object will wait for the next send operation before
 561 taking some recovery action. See the description under Send-Document in [RFC2911] section 3.3.1, for the possible
 562 Printer actions, if the client does not supply a Send-Data request in time.

563 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job
564 owner (as determined in the Create-Job operation) or an operator or administrator of the Printer object (see
565 [RFC2911] sections 1 and 8.5). Otherwise, the Printer MUST reject the operation and return: 'client-error-forbidden',
566 'client-error-not-authenticated', or 'client-error-not-authorized' as appropriate.

567 **3.2.1 Send-Data request**

568 The following attribute sets are part of the Send-Data Request:

569 **Group 1: Operation Attributes**

570 **Natural Language and Character Set:**

571 The "attributes-charset" and "attributes-natural-language" attributes as described in section [RFC2911]
572 3.1.4.1.

573 **Target:**

574 The "document-number" (integer(1:MAX)) operation attribute MUST be supplied immediately after either (1)
575 the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri" (uri) and "operation attribute(s) which
576 define the target Document object for this operation as described in section [RFC2911] 3.1.5. If the client
577 omits the "document-number" operation attribute, the Printer MUST reject the request and return the 'client-
578 error-bad-request' status code.

579 **Requesting User Name:**

580 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in
581 [RFC2911] section 8.3.

582 **Group 2: Document Content**

583 The client MUST supply the document data in-line to be processed for this Document, just like supplying
584 data in the Send-Document and Print-Job requests.

585 **3.2.2 Send-Data Response**

586 The following sets of attributes are part of the Send-Data Response:

587 **Group 1: Operation Attributes**

588 **Status Message:**

589 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a
590 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described
591 in [RFC2911] sections 13 and 3.1.6.

592 **Natural Language and Character Set:**

593 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
594 3.1.4.2.

595 **Group 2: Unsupported Attributes**

596 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

597 **Group 3: Job Object Attributes**

598 The Printer MUST return the same set of Job status attributes as for the Print-Job, Send-Document, and
599 Create-Document responses (see section 3.1.2).

600 **Group 4: Document Object Attributes**

601 The Printer MUST return the same set of Document status attributes as for the Create-Document operation
602 response (see section 3.1.2)

603 **ISSUE 01: OK for the Send-Data operation to return Document status attributes (as well as Job status**
604 **attributes) so as to be like the other Document operations?**

605 **3.3 Send-Document Operation**

606 This REQUIRED⁴ operation allows a client to submit multiple documents in a single Job by making a Send-Document
607 request for each Document. In this specification, the Send-Document creates a Document object ([RFC2911] did not
608 have a Document object). A Printer MUST support this operation with the semantics specified in [RFC2911] and with
609 the extension defined in this specification, since this specification REQUIRES the Printer to support multiple
610 document jobs.

611 See [RFC2911] section 3.3.1 for the semantics of the Send-Document operation not reproduced here.

612 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job
613 owner (as determined in the Create-Job operation) or an operator or administrator of the Printer object (see
614 [RFC2911] sections 1 and 8.5). Otherwise, the Printer MUST reject the operation and return: 'client-error-forbidden',
615 'client-error-not-authenticated', or 'client-error-not-authorized' as appropriate.

616 **3.3.1 Send-Document Request**

617 The following attribute sets are part of the Send-Document Request:

618 **Group 1: Operation Attributes (as in [RFC2911])**

619 As specified in [RFC2911] section 3.3.1 Send-Document request, plus any extensions indicated in Table 6.
620 For example, "compression", "document-format", and "document-name". So this group is the same as for
621 Create-Document (see section 3.1.1).

622 **Group 2: Document Attributes (new - not in [RFC2911])**

623 The client OPTIONALLY supplies a set of Document Template attributes as listed in Table 8. For example,
624 "media" and "number-up". If the client is not supplying any Document Template attributes in the request, the
625 client SHOULD omit Group 2 rather than sending an empty group. However, a Printer object MUST be able
626 to accept an empty group.

627 **Group 3: Document Content (as in [RFC2911] Group 2)**

628 The client MUST supply the document data in-line to be processed for this Document if the "last-document"
629 flag is set to 'false'. However, since a client might not know that the previous Document object created with a
630 Create-Job, Send-Document, or Send-URI operation was the last document (i.e., the "last-document"
631 attribute was set to 'false'), it is legal to send a Send-Document request with no document data where the
632 "last-document" flag is set to 'true'. For this case, the Printer MUST NOT increment the value of the Job
633 object's "number-of-documents" attribute, since no Document object was added to the job. In addition, it is
634 not an error for a client to submit a job with no actual document data, i.e., only a single Create-Job and

⁴ The Send-Document operation is REQUIRED in this specification while it was OPTIONAL in [RFC2911]. This difference is because this specification REQUIRES Printer support of multiple document jobs, while [RFC2911] did not.

635 Send-Document request with a "last-document" operation attribute set to 'true' with no document data; it is
636 only an empty job which is scheduled and processed normally.

637 3.3.2 Send-Document Response

638 The following sets of attributes are part of the Send-Document Response:

639 Group 1: Operation Attributes (as in [RFC2911] Group 1)

640 Status Message:

641 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a
642 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described
643 in [RFC2911] sections 13 and 3.1.6.

644 Natural Language and Character Set:

645 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
646 3.1.4.2.

647 Group 2: Unsupported Attributes (as in [RFC2911] Group 2)

648 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

649 Group 3: Job Object Attributes (as in [RFC2911] Group 3)

650 The Printer MUST return the same set of Job status attributes as for the Print-Job, Send-Document, and
651 Create-Document responses (see section 3.1.2).

652 Group 4: Document Object Attributes (new - as in Create-Document Group 3 - see section 3.1.2)

653 The Printer MUST return the same set of Document status attributes as for the Create-Document operation
654 response (see section 3.1.2).

655 3.4 Send-URI Operation

656 This OPTIONAL operation has the same request and response semantics as the Send-Document operation (see
657 section 3.3) except that a client MUST supply a URI reference ("document-uri" operation attribute) rather than the
658 document data itself. If a Printer object supports this operation, clients can use both Send-URI or Send-Document
659 operations to add new documents to an existing multi-document Job object. However, if a client needs to indicate
660 that the previous Send-URI or Send-Document was the last document, the client MUST use the Send-Document
661 operation with no document data and the "last-document" flag set to 'true' (rather than using a Send-URI operation
662 with no "document-uri" operation attribute).

663 If a Printer object supports this operation, it MUST also support the Print-URI operation (see [RFC2911] section
664 3.2.2).

665 The Printer object MUST validate the syntax and URI scheme of the supplied URI before returning a response, just
666 as in the Print-URI operation. The IPP Printer MAY validate the accessibility of the document as part of the operation
667 or subsequently (see [RFC2911] section 3.2.2).

668 3.5 Validate-Document Operation

669 This REQUIRED operation allows the client to verify capabilities of a Printer against whatever attributes the client
670 supplies in the Validate-Document request in combination with the previously submitted partial Job, if any. This
671 operation has the same inputs as the Create-Document operation request (section 3.1) except the Printer does not
672 create a new Document object. The Printer object returns the same status codes, Operation Attributes (Group 1)
673 and Unsupported Attributes (Group 2) as the Create-Document operation (see section 3.1.2). However, no Job
674 Object Attributes (Group 3) and no Document Object Attributes (Group 4) are returned, since no Document object is
675 created.

676 The client MAY supply a Job object Target, that MUST be either (1) a “printer-uri” and a “job-id” operation attribute or
677 (2) a “job-uri” operation attribute. If supplied, the Job Target MUST identify a job that has been created by Create-
678 Job ([RFC2911] section 3.2.4), but not yet closed, that is, the client hasn’t yet supplied the “last-document” operation
679 attribute with a ‘true’ value. When the client supplies the Job object Target, the Printer MUST validate that an
680 identical Create-Document, Send-Document, or Send-URI operation would have been accepted in the context of the
681 specified Job and its other Document objects.

682 If the client omits the Job Target by including only the “printer-uri” operation attribute, the Printer performs the same
683 validation as for a Create-Document in which there were no Job attributes supplied in the Create-Job and no other
684 Documents. The Printer MUST support the Validate-Document operation with and without the Job object Target
685 being present.

686 In addition to the attributes and groups defined for a Create-Document request (see section 3.1.1), the client MAY
687 supply the “document-uri” operation attribute (defined in the Send-URI operation in [RFC2911] section 3.3.2). If the
688 client supplies the “document-uri” operation attribute, the Printer MUST validate that the URI scheme is supported
689 and that the referenced data is accessible⁵.

690 If the client discovers that a Validate-Document operation fails, it has the choice of (1) canceling the entire partially
691 created job, if any, (2) closing the partially created Job as is (with a Send-Document supplying the “last-document”
692 with a ‘true’ value) so that the Printer will process the Job, or (3) adding other Document objects (with Create-
693 Document, Send-Document, and/or Send-URI) and then closing the Job.

694 By using the Validate-Document operation a client can validate that an identical Create-Document operation (or a
695 Send-Document operation with the document data or a Send-URI operation) would be accepted by the Printer in the
696 context of the partially submitted Job. The Validate-Document operation also performs the same security negotiation
697 as the Create-Document operation (see [RFC2911] section 8), so that a client can check that the client and Printer
698 object security requirements can be met before performing a Create-Document, Send-Document, or Send-URI
699 operation.

700 3.6 Get-Document-Attributes Operation

701 This REQUIRED operation allows a client to request the values of selected attributes of a Document object. This
702 operation is almost identical to the Get-Job-Attributes operation (see [RFC2911] section 3.3.4). The only differences
703 are that the operation is directed at a Document object rather than a Job object and the returned attribute group is a
704 set of Document object attributes rather than a set of Job object attributes.

705 The Printer MUST return the attributes that a client supplied in the Create-Document, Send-Document, or Send-URI
706 operations, plus any Document Description attributes that the Printer has generated. The Printer MUST NOT return
707 any Job Level attributes that the Document object inherits, including “document-overrides” (1setOf collection)
708 member attributes (see [override]), and MUST NOT factor out common Document object attributes and return them

⁵ The PWG PSI [pwg-psi] specification includes a Validate-Document operation with the “document-uri” operation attribute that the Printer MUST validate.

709 as Job object attributes. Thus the Get-Document-Attributes returns to clients the attributes that clients submitted with
710 the Job object and with the Document object.

711 The client MAY display to the user any Document attributes inherited from the Job object. However, such a client
712 MUST query both the Job object using Get-Job-Attributes and the Document object using Get-Document-Attributes
713 in order to be able to merge the inherited attributes with the explicitly-supplied Document attributes. Furthermore, the
714 client MAY factor out common explicitly-supplied Document object attributes and display them once as Job object
715 attributes, instead of with each Document object. However, any such regularization of the display for users is the
716 policy of the client and is outside the scope of this client-Printer protocol specification. Note: specify any such
717 regularization or canonicalization policy in the Printer response would have been impossible to agree to.

718 For Document objects, the possible names of attribute groups are:

719 - 'document-template': the subset of the Document Template attributes that apply to a Document object (the "D"
720 column in Table 8) that the implementation supports for Document objects.

721 - 'document-description': the subset of the Document Description attributes specified in the "Doc" column of
722 Table 9 that the implementation supports for Document objects.

723 - 'all': the special group 'all' that includes all attributes that the implementation supports for Document objects.

724 Since a client MAY request specific attributes or named groups, there is a potential that there is some overlap. For
725 example, if a client requests, 'document-name' and 'document-description', the client is actually requesting the
726 "document-name" attribute once by naming it explicitly, and once by inclusion in the 'document-description' group. In
727 such cases, the Printer object NEED NOT return the attribute only once in the response even if it is requested
728 multiple times. The client SHOULD NOT request the same attribute in multiple ways.

729 It is NOT REQUIRED that a Document object to support all attributes belonging to a group (since some attributes are
730 OPTIONAL). However, it is REQUIRED that the Printer support all these group names for the Document object.

731 3.6.1 Get-Document-Attributes Request

732 The following groups of attributes are part of the Get-Document-Attributes Request when the request is directed at a
733 Document object:

734 Group 1: Operation Attributes

735 Natural Language and Character Set:

736 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
737 3.1.4.1.

738 Target:

739 The "document-number" (integer(1:MAX)) operation attribute MUST be supplied immediately after either (1)
740 the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri" (uri) operation attribute(s) which define
741 the target Document object for this operation as described in [RFC2911] section 3.1.5. If the client omits the
742 "document-number" operation attribute, the Printer MUST reject the request and return the 'client-error-bad-
743 request' status code.

744 Requesting User Name:

745 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in
746 [RFC2911] section 8.3.

747 **3.6.1.1 "requested-attributes" (1setOf keyword):**

748 The client OPTIONALLY supplies this attribute. The Printer MUST support this attribute. It is a set of
749 attribute names and/or attribute group names in whose values the requester is interested. If the client omits
750 this attribute, the Printer MUST respond as if this attribute had been supplied with a value of 'all'.

751 **3.6.2 Get-Document-Attributes Response**

752 The Printer object returns the following sets of attributes as part of the Get-Document-Attributes Response:

753 **Group 1: Operation Attributes**

754 **Status Message:**

755 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a
756 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described
757 in [RFC2911] sections 13 and 3.1.6.

758 **Natural Language and Character Set:**

759 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
760 3.1.4.2. The "attributes-natural-language" MAY be the natural language of the Document object, rather than
761 the one requested.

762 **Group 2: Unsupported Attributes**

763 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

764 The response NEED NOT contain the "requested-attributes" operation attribute with any supplied values
765 (attribute keywords) that were requested by the client but are not supported by the Printer. If the Printer
766 object does return unsupported attributes referenced in the "requested-attributes" operation attribute and that
767 attribute included group names, such as 'all', the unsupported attributes MUST NOT include attributes
768 described in the standard but not supported by the implementation.

769 **Group 3: Document Object Attributes**

770 This is the set of requested attributes and their current values. The Printer ignores (does not respond with)
771 any requested attribute or value which is not supported. Furthermore, the Printer MUST NOT return
772 Document Template attributes that were not supplied by a client in a Create-Document, Send-Document, or
773 Send-URI request or set by a Set-Document-Attributes request. So the response reflects what was
774 submitted. The Printer MAY omit returning attributes that are restricted by the Printer's security policy in
775 force, including whether the requesting user is the user that submitted the job (job originating user) or not
776 (see [RFC2911] section 8). However, the Printer MUST respond with the 'unknown' value for any supported
777 attribute (including all REQUIRED attributes) for which the Printer does not know the value, unless it would
778 violate the security policy. See the description of the "out-of-band" values in the beginning of [RFC2911]
779 Section 4.1.

780 **3.7 Get-Documents Operation**

781 This REQUIRED operation allows a client to retrieve the list of Document objects belonging to the target Job object.
782 The client MAY also supply a list of Document attribute names and/or attribute group names. A group of Document
783 object attributes will be returned for each Document object in the Job.

784 This operation is similar to the Get-Document-Attributes operation (see section 3.5), except that this Get-Documents
785 operation returns attributes from all Document objects contained in the Job object, instead of from a single selected
786 Document object in the Job object. As with the Get-Document-Attributes operation the Printer MUST only return

787 attributes that were submitted by a client when the Document object was created by the Create-Document, Send-
788 Document, or Send-URI operations and possibly modified by the Set-Documents-Attributes operation (see section
789 3.8).

790 3.7.1 Get-Documents Request

791 The client submits the Get-Documents request to a Printer object. The Get-Documents is similar to the Get-Jobs
792 operations (see [RFC2911] section 3.2.6) except that there are no equivalents to the "which-jobs" and "my-jobs"
793 operation attributes.

794 The following groups of attributes are part of the Get-Documents Request:

795 Group 1: Operation Attributes

796 Natural Language and Character Set:

797 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
798 3.1.4.1.

799 Target:

800 Either (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri" (uri) operation attribute(s)
801 which define the target Job object for this operation as described in [RFC2911] section 3.1.5.

802 Requesting User Name:

803 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in
804 [RFC2911] section 8.3.

805 3.7.1.1 "limit" (integer(1:MAX)):

806 The client OPTIONALLY supplies this attribute. The Printer object MUST support this attribute. It is an
807 integer value that determines the maximum number of Documents that a client will receive from the Printer.
808 The limit is a "stateless limit" in that if the value supplied by the client is 'N', then only the first 'N' Documents
809 are returned in the Get-Documents Response. There is no mechanism to allow for the next 'M' Documents
810 after the first 'N' Documents. If the client does not supply this attribute, the Printer object responds with all
811 Documents.

812 3.7.1.2 "requested-attributes" (1setOf type2 keyword):

813 The client OPTIONALLY supplies this attribute. The Printer object MUST support this attribute. It is a set of
814 Document attribute names and/or attribute groups names in whose values the requester is interested. This
815 set of attributes is returned for each Document object that is returned. The allowed attribute group names
816 are the same as those defined in the Get-Documents-Attributes operation in section 3.6.1.

817 If the client does not supply this attribute, the Printer MUST respond as if the client had supplied this attribute
818 with the two values:

819 'document-number' (see section 8.1)

820 'document-id-uri' (see section 8.2).

821

822 3.7.2 Get-Documents Response

823 The Printer object returns all of the Document objects up to the number specified by the "limit" attribute that match
824 the criteria as defined by the attribute values supplied by the client in the request. If the client requests any
825 Document attributes at all, there is a set of Document Object Attributes returned for each Document object.

826 It is not an error for the Printer to return 0 Documents. If the response returns 0 Documents because there are no
827 Documents in the Job, then the status code for 0 Documents MUST be 'successful-ok'.

828 **Group 1: Operation Attributes**

829 **Status Message:**

830 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a
831 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described
832 in [RFC2911] sections 13 and 3.1.6.

833 **Natural Language and Character Set:**

834 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
835 3.1.4.2.

836 **Group 2: Unsupported Attributes**

837 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

838 The response NEED NOT contain the "requested-attributes" operation attribute with any supplied values
839 (attribute keywords) that were requested by the client but are not supported by the Printer. If the Printer
840 object does return unsupported attributes referenced in the "requested-attributes" operation attribute and that
841 attribute included group names, such as 'all', the unsupported attributes MUST NOT include attributes
842 described in the standard but not supported by the implementation.

843 **Groups 3 to N: Document Object Attributes**

844 The Printer object responds with one set of Document Object Attributes for each returned Document object.
845 The Printer object ignores (does not respond with) any requested attribute or value which is not supported or
846 which is restricted by the security policy in force, including whether the requesting user is the user that
847 submitted the job (job originating user) or not (see [RFC2911] section 8). However, the Printer object MUST
848 respond with the 'unknown' value for any supported attribute (including all REQUIRED attributes) for which
849 the Printer object does not know the value, unless it would violate the security policy. See the description of
850 the "out-of-band" values in the beginning of [RFC2911] section 4.1.

851 The Printer MUST return the Groups for the requested Job in order of increasing "document-number"
852 Document Description attribute value.

853 **3.8 Set-Document-Attributes Operation**

854 This OPTIONAL operation allows a client to set the values of the attributes of a Document object after the Document
855 object was submitted to the Printer. In the request, the client supplies the set of Document keyword attribute names
856 and values that are to be set. In the response, the Printer returns success or rejects the entire request with
857 indications of which attribute or attributes could not be set.

858 This operation is almost identical to the Set-Job-Attributes operation and follows the same rules for validation (see
859 [set-ops] section 4.2). The only differences are that the Set-Document-Attributes operation is directed at a Document
860 object rather than a Job object. As with the Set-Job-Attributes operation, The Set-Document-Attributes operation
861 can add an attribute to the Target object, accepts the 'delete-attributes' out-of-band value to remove an attribute from
862 the Target object. In addition the validation is the same as the Create-Document, Send-Document, and Send-URI
863 operations that create Document objects, i.e., the Printer validation depends on the "xxx-supported" Printer
864 Description attributes (see [RFC2911] section 3.1).

865 If a client supplies a document attribute in a Set-Document-Attributes request that the Printer supports, and the
 866 document was originally submitted without supplying that attribute, the Printer adds the attribute to the Document
 867 object.

868 If the client supplies a document attribute with the "out-of-band" value 'delete-attribute' (see [set-ops] section 8.2),
 869 then the Printer MUST remove the attribute and all of its values from the Document object, if present. The semantic
 870 effect of the client supplying the 'delete-attribute' value in a Set-Document-Attributes operation MUST be the same as
 871 if the attribute had not been supplied with the Document object in the Document Creation operation, i.e., the Printer
 872 applies its default attribute or behavior with lower precedence than the PDL (see the beginning of [RFC2911] section
 873 4.2 and [RFC2911] 3.2.1.1). Any subsequent query of the Document object using Get-Document-Attributes or Get-
 874 Documents MUST NOT return any attribute that has been deleted using the 'delete-attribute' out-of-band value.
 875 However, a client can re-establish such a deleted Document attribute with any supported value(s) using a
 876 subsequent Set-Document-Attributes operation.

877 If the client supplies an attribute in a Set-Document-Attributes request with the 'delete-attribute' value and that
 878 attribute is not present on the Document object, the Printer ignores that supplied attribute in the request, does not
 879 return the attribute in the Unsupported Attributes group, and returns the 'successful-ok' status code, if there are no
 880 other problems with the request.

881 The validation of the Set-Document-Attributes request is performed by the Printer as if the document had been
 882 submitted originally with the new attribute values (and the deleted attributes removed) and with "ipp-attribute-fidelity"
 883 set to 'true', i.e., all modified attributes Document attributes and values MUST be supported in combination with the
 884 Document attributes not modified. If such a Document Creation operation would have been accepted, then the Set-
 885 Document-Attributes MUST be accepted. If such a Document Creation operation would have been rejected, then the
 886 Set-Document-Attributes MUST be rejected and the Document MUST be unchanged. In addition, if any of the
 887 supplied attributes are not supported, are not settable, or the values are not supported, the Printer object MUST
 888 reject the entire operation; the Printer object MUST NOT partially set some of the supplied attributes. In other words,
 889 after the operation, all the supplied attributes MUST be set or none of them MUST be set, thus making the Set-
 890 Document-Attributes an atomic operation.

891 The Printer MUST accept or reject this operations when the Document's READ-ONLY "document-state" attribute has
 892 the values shown in Table 5. The document's current state MUST affect whether the Printer accepts or rejects the
 893 request. However, the Set-Document-Attributes operation MUST NOT change the state of the Document object
 894 (since the Document is a passive object and the Document state is a subset of the Job State). For example, in the
 895 case where the operation creates a request for unavailable resources, the Job (but not the Document) transitions to a
 896 new state. Table 5 shows the allowed behaviors in each document state.

897 **Table 5 - Document State Table for the Set-Document-Attributes operation**

Current "document-state"	New "document-state" (no change)	Printer's response status code and "action":
'pending'	'pending'	'successful-ok'
'pending'	'pending'	'successful-ok' - needed resources are not ready (the Job MAY change state, but the Document MUST NOT).
'processing'	'processing'	'successful-ok' or 'client-error-not-possible' depending on implementation, including the attributes being set, whether the document has started marking media, etc.
'completed'	'completed'	'client-error-not-possible'
'canceled'	'canceled'	'client-error-not-possible'
'aborted'	'aborted'	'client-error-not-possible'

898

899 This operation MUST NOT change the value of attributes not specified in the operation unless the definition of the
 900 attribute explicitly specifies such side-effects. In general, Document attribute definitions that are settable will not
 901 define side-effects on other attributes that are settable, only side effects on READ-ONLY attributes, if any.

902 **3.8.1 Settable and READ-ONLY Document Description attributes**

903 If the Printer supports the Set-Document-Attributes operation, then it SHOULD support setting of:
 904 all Document Template document ("xxx") attributes
 905 that the implementation supports (see the column labeled "D" in Table 8).

906 Almost all Document Description attributes (see [RFC2911] section 4.3) MUST NOT be settable, i.e., they are
 907 defined to be READ-ONLY. Only Document Description attributes marked with "(r/w)" in Table 8 MAY be settable
 908 using Set-Document-Attributes. The Printer MUST reject a Set-Document-Attributes request that attempts to set any
 909 attributes in Table 8 that is not marked "(r/w)".

910 Note: From now on, all extensions that define new object attributes will indicate whether or not the attributes are
 911 READ-ONLY, by including the "READ-ONLY" adjective in their descriptions and/or explicitly stating whether they
 912 MAY be settable.

913 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job
 914 owner (as determined in the Job Creation operation) or an operator or administrator of the Printer object (see
 915 [RFC2911] Sections 1 and 8.5).

916 **3.8.2 Set-Document-Attributes Request**

917 The following sets of attributes are part of the Set-Document-Attributes Request:

918 **Group 1: Operation Attributes**

919 **Natural Language and Character Set:**

920 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
 921 3.1.4.1.

922 **Target:**

923 The client MUST supply the "document-number" (integer(1:MAX)) operation attribute immediately after either
 924 (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri" (uri) operation attribute(s) which
 925 define the target Document object for this operation as described in [RFC2911] section 3.1.5. If the client
 926 omits the "document-number" operation attribute, the Printer MUST reject the request and return the 'client-
 927 error-bad-request' status code.

928 Note: There is no way in a single operation for the client to set all of a Job's Document objects to the same
 929 attribute value. Either (1) the client sets the corresponding attribute in each Document object in the Job with
 930 separate Set-Document-Attributes requests, or (2) the client sets the corresponding attribute at the Job Level
 931 using the Set-Job-Attributes operation. Setting the corresponding attribute at the Job Level (or supplying that
 932 attribute initially in the Job Creation operation) causes each Document object to inherit the Job Level
 933 attribute value, if the Document object doesn't have a corresponding explicit attribute supplied at the
 934 Document Level. In other words, supplying an attribute at the Job Levels will affect all the Job's Document
 935 objects that don't have that attribute also explicitly supplied at the Document Level.

936 **Requesting User Name:**

937 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in
 938 [RFC2911] section 8.3.

939 Group 2: Document Attributes

940 The client MUST supply a set of Document Template attributes with one or more values (including explicitly
 941 allowed out-of-band values) as listed in column labeled "D" in Table 8 - Job Template and Document
 942 Template attributes and Document Description attributes flagged with "(r/w)" and listed in the column labeled
 943 "Doc" in Table 9 - Job and Document Description attributes, and any attribute extensions supported by the
 944 Printer. The value(s) of each Document attribute supplied in Group 2 replaces the value(s) of the
 945 corresponding Document attribute on the target Document object. For attributes that can have multiple
 946 values (1setOf), all values supplied by the client replace all values of the corresponding Document object
 947 attribute.

948 In order to set the Document's "document-message" Document Description attribute (see section 8.10), the
 949 client MUST supply the attribute in Group 2, rather than supplying a "document-message" operation attribute
 950 in Group 1.

951 If the client supplies an "xxx" attribute with the 'delete-attribute' out-of-band value (see [set-ops] section 8.2),
 952 the Printer MUST remove the "xxx" attribute from the Document object, if present.

953 3.8.3 Set-Documents-Attributes Response

954 The Printer returns the following sets of attributes as part of the Set-Documents-Attributes Response:

955 Group 1: Operation Attributes

956 Status Message:

957 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a
 958 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described
 959 in [RFC2911] sections 13 and 3.1.6.

960 Natural Language and Character Set:

961 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
 962 3.1.4.2.

963 Group 2: Unsupported Attributes

964 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

965 If some of the attributes in the operation fail to validate, the Printer MUST reject the operation, MUST NOT
 966 change any Document attributes, and MUST return the indicated status code below. In this group, the
 967 Printer MUST also return all attributes that fail to validate. The following are the reasons that an attribute
 968 fails to validate and the value returned for the attribute, along with the indicated status code and order of
 969 detection:

- 970 1. The number of attributes supplied by the client exceeds the maximum number that the Printer
 971 supports in a Set-Printer-Attributes request: return the 'client-error-request-entity-too-large' (see
 972 [RFC2911] section 13.1.4.9).
- 973 2. The Printer doesn't support the attribute: return the attribute with the 'unsupported' out-of-band
 974 attribute value (see [RFC2911] section 3.1.7 and [RFC2910]) and the 'client-error-attributes-or-
 975 values-not-supported' (see [RFC2911] section 13.1.4.12).
- 976 3. The attribute is READ-ONLY (in its definition) or is not-settable in this implementation: return the
 977 attribute with the 'not-settable' out-of-band attribute value (see [set-ops] section 8.1) and the
 978 'client-error-attributes-not-settable' status code (see [set-ops] section 7.1).

- 979 4. The Printer doesn't support the value: if the attribute in the operation has a single value return it.
- 980 If the attribute in the operation is multi-valued, return only those values in a 1setOf that are not
- 981 supported. Return the 'client-error-attributes-or-values-not-supported' status code (see [RFC2911]
- 982 section 13.1.4.12).

- 983 5. The values of some of the supplied attributes conflict with one another and/or other Document
- 984 attribute values not being set: if the conflicting attribute in the operation has a single value return
- 985 the attribute and the value. If the attribute in the operation is multi-valued, return only the attribute
- 986 and those values in a 1setOf that are conflicting with other attributes. Return the 'client-error-
- 987 conflicting-attributes' status code (see [RFC2911] section 13.1.4.15).

988 3.9 Cancel-Document Operation

989 This REQUIRED operation allows a client to cancel a specified Document in a specified Print Job from the time the
 990 Document is created up to, but not including, the time it is completed, canceled, or aborted. Since a Document might
 991 already be printing by the time a Cancel-Document is received, some media sheet pages might be printed before the
 992 document processing is actually terminated.

993 The Cancel-Document operation does not remove the Document from the Job and Printer, but only sets the specified
 994 Document's "document-state" Document Description attribute to 'canceled' and the Document's "document-state-
 995 reasons" Document Description attribute to 'canceled-by-user' or 'cancel-by-operator'. If the Job object is printed
 996 again using operations such as the Reprocess-Job operation (see [adm-ops] section 4.1) or the Restart-Job
 997 operation (see [RFC2911] section 3.3.7), any canceled Documents are also printed again. Thus Cancel-Document
 998 has the same semantics as Cancel-Job (see [RFC2911] section 3.3.3), which only cancels the processing of the job,
 999 and doesn't delete the Job object itself. See the Delete-Document operation (section 3.11) to remove the Document
 1000 object itself immediately from the Job and Printer.

1001 The Cancel-Document operation does not affect the states of any of the other Document objects in the job. If the Job
 1002 was processing and there are more Documents to be processed, the Printer does so. If there are no further
 1003 Documents to process, the Job moves to the 'completed' state as usual whenever there is no more processing to be
 1004 done.

1005 The Printer MUST accept or reject the request based on the document's current state and transition the document to
 1006 the indicated new state as follows:

Current "document-state"	New "document-state"	Printer object's response status code and action:
'pending'	'canceled'	'successful-ok'
'processing'	'canceled'	'successful-ok'
'processing'	'processing'	'successful-ok' See Rule 1
'processing'	'processing'	'client-error-not-possible' See Rule 2
'completed'	'completed'	'client-error-not-possible'
'canceled'	'canceled'	'client-error-not-possible'
'aborted'	'aborted'	'client-error-not-possible'

1007 Rule 1: If the implementation requires some measurable time to cancel the document in the 'processing' document
 1008 states, the Printer object MUST add the 'processing-to-stop-point' value to the document's "document-state-reasons"
 1009 attribute and then transition the document to the 'canceled' state when the processing ceases (see [RFC2911]
 1010 section 4.3.8).

1011 Rule 2: If the Document object already has the 'processing-to-stop-point' value in its "document-state-reasons"
 1012 attribute, then the Printer object MUST reject a Cancel-Document operation.

1013 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job
 1014 owner or an operator or administrator of the Printer object (see [RFC2911] sections 1 and 8.5). Otherwise, the
 1015 Printer MUST reject the operation and return: 'client-error-forbidden', 'client-error-not-authenticated', or 'client-error-
 1016 not-authorized' as appropriate.

1017 **3.9.1 Cancel-Document Request**

1018 The following groups of attributes are part of the Cancel-Document Request:

1019 **Group 1: Operation Attributes**

1020 **Natural Language and Character Set:**

1021 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
 1022 3.1.4.1.

1023 **Target:**

1024 The client MUST supply the "document-number" (integer(1:MAX)) operation attribute immediately after either
 1025 (1) the "printer-uri" (uri) plus "job-id" (integer(1:MAX)) or (2) the "job-uri" (uri) operation attribute(s) which
 1026 define the target Document object for this operation as described in section [RFC2911] 3.1.5. If the client
 1027 omits the "document-number" operation attribute, the Printer MUST reject the request and return the 'client-
 1028 error-bad-request' status code.

1029 **Requesting User Name:**

1030 The "requesting-user-name" (name(MAX)) attribute SHOULD be supplied by the client as described in
 1031 [RFC2911] section 8.3.

1032 **3.9.1.1 document-message (text(127))**

operation attribute

1033 The client MAY supply this operation attribute. If the Printer supports this attribute, the Printer MUST also
 1034 support the corresponding "document-message" (text(127)) Document Description attribute (see section
 1035 8.10) and copy this value to the "document-message" Document Description attribute. The end user can use
 1036 this Document Description attribute as a message to the operator and the operator can use it as a message
 1037 to the user. The Printer MAY print this message on a document start sheet for this document, if any.

1038 The Printer MUST ignore the new "job-message-from-operator" operation attribute (see [adm-ops] section 6)
 1039 for this operation, since that is a job only attribute and Cancel-Document is a Document operation.

1040 **3.9.2 Cancel-Document Response**

1041 The following sets of attributes are part of the Cancel-Document Response:

1042 **Group 1: Operation Attributes**

1043 **Status Message:**

1044 In addition to the REQUIRED status code returned in every response, the response OPTIONALLY includes a
 1045 "status-message" (text(255)) and/or a "detailed-status-message" (text(MAX)) operation attribute as described
 1046 in [RFC2911] sections 13 and 3.1.6.

1047 **Natural Language and Character Set:**

1048 The "attributes-charset" and "attributes-natural-language" attributes as described in [RFC2911] section
 1049 3.1.4.2.

1050 **Group 2: Unsupported Attributes**

1051 See [RFC2911] section 3.1.7 for details on returning Unsupported Attributes.

1052 Once a successful response has been sent, the implementation guarantees that the Document will eventually end up
 1053 in the 'canceled' state. Between the time of the Cancel-Document operation is accepted and when the document
 1054 enters the 'canceled' document-state (see section 8.5), the "document-state-reasons" attribute (see section 8.7)
 1055 SHOULD contain the 'processing-to-stop-point' value which indicates to later queries that although the Document
 1056 might still be 'processing', it will eventually end up in the 'canceled' state, not the 'completed' state.

1057 **3.10 Cancel-Current-Document Operation⁶**

1058 This OPTIONAL operation allows a client to cancel either (1) any current Document of the current Job on the target
 1059 Printer or (2) the specified document in a specified job if they are the current document and job on the Printer. One
 1060 of the uses of this operation is by operators in an emergency, where the job-id and document-number might be
 1061 unknown to the operator. See section 3.9 for the semantics of canceling a Document and what values the Printer
 1062 sets the Document's Document Description attributes. Since a Document might already be marking by the time a
 1063 Cancel-Current-Document is received, some media sheet pages might be printed before the document is actually
 1064 terminated.

1065 If the client does not supply a "job-id" and "document-number" operation attributes, the Printer MUST accept the
 1066 request and cancel the current document if there is a current document in the 'processing' state; otherwise, it MUST
 1067 reject the request and return the 'client-error-not-possible' status code. If more than one document is in the
 1068 'processing' or 'processing-stopped' states, the one that is marking is canceled and the others are unaffected.

1069 Warning: On a shared printer, there is a race condition. Between the time that a user issues this operation and its
 1070 acceptance, the current document might change to a different document or even a different job. If the user or
 1071 operator is authenticated to cancel the new job, the wrong document is canceled. To prevent this race from
 1072 canceling the wrong document, the client MAY supply the "job-id" and "document-number" operation attributes which
 1073 is checked against the current job's "job-id" and the current Document's "document-number". If the job identified by
 1074 the "job-id" attribute is not the current job on the Printer and the "document-number" is not the current Document in
 1075 that current Job, i.e., is not in the 'processing' state, the Printer MUST reject this operation and return the 'client-
 1076 error-not-possible' status code. Otherwise, the Printer cancels the specified document.

1077 *Access Rights:* The authenticated user (see [RFC2911] section 8.3) performing this operation must either be the job
 1078 owner (as determined in the Job Creation operation) or an operator or administrator of the Printer object (see
 1079 [RFC2911] Sections 1 and 8.5).

1080 The Cancel-Current-Document Request and Cancel-Current-Document Response have the same attribute groups
 1081 and attributes as the Pause-Printer operation (see [RFC2911] section 3.2.8) with the addition of the following Group
 1082 1 Operation attributes in the request:

1083 **3.10.1 job-id (integer(1:MAX)) operation attribute**

1084 The client OPTIONALLY supplies this Operation attribute in order to verify that the identified job is still the
 1085 current job on the target Printer object. The Printer MUST supports this operation attribute, if it supports this
 1086 operation.

⁶ In some modeling regimes, the Cancel-Current-Document operation might be a Device method, rather than a Job or Document method.

3.10.2 document-number (integer(1:MAX))**operation attribute**

The client OPTIONALLY supplies this Operation attribute in order to verify that the identified document is still the current document on the target Printer object. The Printer MUST support this operation attribute, if it supports this operation.

3.10.3 document-message (text(127))**operation attribute**

The client MAY supply this operation attribute. If the Printer supports this attribute, the Printer MUST also support the corresponding "document-message" (text(127)) Document Description attribute (see section 8.10) and copy this value to the "document-message" Document Description attribute. The end user can use this Document Description attribute as a message to the operator and the operator can use it as a message to the user. The Printer MAY print this message on a document start sheet for this document, if any.

The Printer MUST ignore the new "job-message-from-operator" operation attribute (see [adm-ops] section 6) for this operation, since that is a job only attribute and Cancel-Current-Documents is a Document operation.

3.11 Delete-Documents Operation

This OPTIONAL operation removes the specified Document object and its data immediately from the specified Job. The Printer MUST reject the request if the Document is in any state, but 'pending' (there is no 'pending-held' state for Documents). The Printer does not reassign the "document-number" Document Description attribute values of the remaining Document objects in the Job, so that the deleted Document object leaves a gap in the document numbering space for the Job. The Printer MUST return a 'client-error-not-found' status code, in a subsequent Get-Document-Attributes operation for this Document object specifying its former "document-number". This operation is similar to the Purge-Jobs operation which immediately deletes all jobs from the Printer. However, the Delete-Documents operation only deletes a single Document from the specified Job.

Access Rights: The authenticated user (see [RFC2911] section 8.3) performing this operation MUST be an operator or administrator of the Printer object (see [RFC2911] sections 1 and 8.5). Otherwise, the Printer MUST reject the operation and return: 'client-error-forbidden', 'client-error-not-authenticated', or 'client-error-not-authorized' as appropriate. This operation requires operator/administrator privileges, otherwise a rogue client could submit, then delete, at will using up valuable spooling space. Instead of using this operation, unprivileged users use Cancel-Document which goes through the normal accounting, if any.

The Delete-Documents request and Delete-Documents response have the same attribute groups and attributes as the Cancel-Document operation (see section 3.9).

4 Semantic extensions to Job operations

This section defines effects that Job operations have on the Document object. Printer and Subscription object (Event Notification [ntfy]) operations MUST have no effect on the Document object and the Document object has no effect on the semantics of the Printer and Subscription operations. The Job operations that MUST NOT have any effect on the Document object because they are defined to affect the Job object as a whole are: **Get-Job-Attributes**⁷ ([RFC2911] section 3.3.4), **Get-Jobs**⁸ ([RFC2911] section 3.2.6), **Hold-Job** ([RFC2911] section 3.3.5), **Promote-Job**

⁷ The Printer MUST NOT copy up to the Job object any Document attributes supplied at the Document Level in Create-Document, Send-Document, or Send-URI to the Job object as observable by the client in any Get-Job-Attributes operation responses.

⁸ The Printer MUST NOT copy up to the Job object any Document attributes supplied at the Document Level in Create-Document, Send-Document, or Send-URI to the Job object as observable by the client in any Get-Job-Attributes operation responses.

1122 ([adm-ops] section 4.4.1), **Release-Held-New-Jobs** ([adm-ops] section 3.3.2), **Resume-Job** ([adm-ops] section
1123 4.3.2), **Schedule-Job-After** ([adm-ops] section 4.4.2), **Set-Job-Attributes** ([set-ops] section 4.2), and **Validate-Job**
1124 ([RFC2911] section 3.2.3).

1125 The Job operations that affect Document objects or that Document objects affect the semantics of the Job operations
1126 are, in alphabetical order:

1127 **4.1 Cancel-Current-Job** ([adm-ops] section 4.2)

1128 The Printer sets the “document-state” Document Description attribute to ‘canceled’ and the “document-state-reasons”
1129 Document Description attribute to ‘canceled-by-xxx’ for any documents in the current Job that have not yet reached a
1130 terminal state (‘completed’, ‘canceled’, or ‘aborted’), where “xxx” is ‘user’ or ‘operator’. See [adm-ops] section 4.2.

1131 **4.2 Cancel-Job** ([RFC2911] section 3.3.3)

1132 The Printer sets “document-state” Document Description attribute to ‘canceled’ and the “document-state-reasons”
1133 Document Description attribute to ‘canceled-by-user’ or ‘canceled-by-operator’ for *all* Document objects in the
1134 identified Job that have not yet reached a terminal state (‘completed’, ‘canceled’, or ‘aborted’).

1135 **4.3 Create-Job** ([RFC2911] section 3.2.4)

1136 The Printer creates the Job object with all of the mixture of Job and Document attributes supplied in the Create-Job
1137 operation. The Document objects that are subsequently created for the specified Job inherit the Document attributes
1138 from the Job object. However, the Printer **MUST NOT** copy down any Job Level attributes, including “document-
1139 overrides” ([override]) to the Document object as observable by a client in any Get-Documents or Get-Documents-
1140 Attributes operation responses.

1141 **4.4 Print-Job** ([RFC2911] section 3.2.1)

1142 The Printer creates one Document object as a side effect of the Print-Job operation. All of the attributes supplied by
1143 the client **MUST** remain at the Job Level as part of the Job object. Any Document attributes supplied have affect on
1144 the Document object because the Document object inherits them from the Job object. The Printer **MUST** populate
1145 the single Document object’s “document-state”, “document-state-reasons”, and “document-number” Document
1146 Description attributes with appropriate values. Thus a Get-Documents or Get-Documents-Attributes for a Job created
1147 by Print-Job will return no attributes supplied by the client, but will return the populated Document Description
1148 attributes.

1149 **4.5 Print-URI** ([RFC2911] section 3.2.2)

1150 The Printer creates one Document object as a side effect of the Print-URI operation. All of the attributes supplied by
1151 the client **MUST** remain at the Job Level as part of the Job object. Any Document attributes supplied have affect on
1152 the Document object because the Document object inherits them from the Job object. The Printer **MUST** populate
1153 the Document object’s “document-state”, “document-state-reasons”, and “document-number” Document Description
1154 attributes with appropriate values. Thus a Get-Documents or Get-Documents-Attributes for a Job created by Print-Job
1155 will return no attributes supplied by the client, but will return the populated Document Description attributes.

1156 **4.6 Purge-Jobs** ([RFC2911] section 3.2.9)

1157 The Printer removes all Job and all of their contained Document objects.

1158 **4.7 Release-Job ([RFC2911] section 3.3.6)**

1159 The Printer moves the job to the 'pending' state, if there are no other "job-state-reasons" to hold the job. The values
1160 of the "document-state-reasons" attributes MUST NOT affect job scheduling (see Table 11), only the Job's "job-state-
1161 reasons" values.

1162 **4.8 Reprocess-Job ([adm-ops] section 4.1)**

1163 The Printer processes the Job again by processing *all* Documents in the Job, including ones that have been
1164 canceled by a previous Cancel-Document operation. Therefore, the Printer removes any 'canceled-by-xxx' values
1165 from any of the "document-state-reasons" attributes and the Job's "job-state-reasons" attributes.

1166 **4.9 Restart-Job ([RFC2911] section 3.3.7)**

1167 The Printer starts the Job over again by processing *all* Documents in the Job, including ones that have been
1168 canceled by a previous Cancel-Document operation. Therefore, the Printer removes any 'canceled-by-xxx' values
1169 from any of the "document-state-reasons" attributes and the Job's "job-state-reasons" attributes and

1170 **4.10 Send-Document ([RFC2911] section 3.3.1)**

1171 The Printer accepts a new Document Attributes group (Group 4) that the client can supply Document Template
1172 attribute and creates a Document object (see section 3.3).

1173 **4.11 Send-URI ([RFC2911] section 3.3.2)**

1174 The Printer accepts a new Document Attributes group (Group 4) that the client can supply Document Template
1175 attribute and creates a Document object (see section 3.4).

1176 **4.12 Suspend-Current-Job ([adm-ops] section 4.3.1)**

1177 The Printer suspends the current job and sets the Job's "job-state" Job Description attribute to 'processing-stopped'
1178 and "job-state-reasons" to 'job-suspended-by-xxx', where 'xxx' is 'user' or 'operator'. The Documents' "document-
1179 state" and "document-state-reasons" Document Description attributes are unaffected (but the Documents are not
1180 processed any further, since the Job is stopped).

1181 **5 Attribute Precedence**

1182 This section defines the Attribute Precedence rules for Queue Override attributes, Page Override attributes,
1183 Document Object attributes, Document Override attributes, Job Object attributes, PDL instructions, PDL Interpreter
1184 initialization files, and Printer object defaults. Since each attribute can be specified for all of these levels, it is
1185 important to define which level takes precedence when the same attribute occurs at different levels with differing
1186 values.

1187 The attribute precedence model has the following features:

1188 1) In principle, each defined attribute can occur at each of the precedence levels.

- 1189 2) Attributes can be introduced and modified at different points in the job workflow, e.g., in the application, print
1190 driver, submission client, protocol, and Printer:
- 1191 • Attributes are supplied by different agents in the system: application, user, print driver, administrator,
1192 operator, Printer object, and the output device hardware.
 - 1193 • Attributes are supplied at different points in time: PDL generation, job submission, job acceptance, job
1194 pending, job processing.
- 1195 3) Attributes can be introduced and modified at different points in the job workflow, e.g., in the application, print
1196 driver, submission client, protocol, and Printer.
- 1197 4) The later that an attribute is introduced into the work flow or the closer the specified scope of the attribute is
1198 to the affected object, the higher the precedence is assigned to that attribute, since precedence is intended
1199 to reflect the user's wishes.

1200 The following levels of Attribute Precedence are defined in order of decreasing priority:

- 1201 1. **queue override** - The value that the Printer enforces for any job submitted to it (see [prod-print2] section
1202 3.1). Set by the administrator when configuring the Printer by setting an "xxx-supported" Printer attribute
1203 to contain a single value, i.e., the override value. Example: the administrator sets the Printer's "sides" =
1204 'two-sided-long' so that all jobs submitted to that (logical) Printer are printed two-sided flipped along the
1205 long edge.

1206 Note: The **queue override** level is only available for Printers that support the 'guaranteed' value for
1207 its "pdl-override-supported" attribute (see [prod-print2] section 8). All other levels are available for all
1208 Printers independent of the "pdl-override-supported" value.

- 1209 2. **Document Level - page override programming** - The special "page-overrides" collection Document
1210 Template attribute (see [override]) supplied at the Document Level, that is, in a Create-Documents, Send-
1211 Document, or Send-URI operation, that contains the attributes that are to have the page override status
1212 for the specified ranges of pages in the Input-Documents or the Output-Documents. Supplied by the client
1213 when submitting a Document object, or set by the user or operator after the Document has been
1214 accepted either using the Set-Documents-Attributes operation, or by the operator using means local to the
1215 Printer. Example: "page-overrides" = {"page-number" = '1'; "media" = 'letterhead'}

- 1216 3. **Job Level - page override programming** - The special "page-overrides" collection Job Template
1217 attribute (see [override]) supplied at the Job Level, that is, in a Job Creation operation, that contains the
1218 attributes that are to have the page override status for the specified ranges of pages in the Input-
1219 Document or the Output-Documents. Supplied by the client when submitting a job either in the protocol,
1220 or set by the user or operator after the job has been accepted either using the Set-Job-Attributes
1221 operation, or by the operator using means local to the Printer. Example: "page-overrides" = {"page-
1222 number" = '1'; "media" = 'letterhead'}

- 1223 4. **Document Level - Document object attributes** - The Document attributes supplied at the Document
1224 Level, that is, in a Create-Documents, Send-Documents, or Send-URI operation to apply to the Input
1225 Document. Supplied by the client when submitting a Document object, or set by the user or operator
1226 after the Document has been accepted either using the Set-Job-Attributes operation, or by the operator
1227 using means local to the Printer. Examples: "media" = 'na-letter' and "copies" = '2'.

- 1228 5. **Document Level - document override programming** - The special "document-overrides" collection
1229 operation attribute (see [override]) supplied by the client in the Send-Documents or Send-URI request.
1230 The collection contains the member attributes that are to override attributes specified at lower
1231 precedence for the specified range of documents, including the current Document and subsequently

- 1232 created Documents. Clients that support the Document object SHOULD supply the attributes as
 1233 Document Template attributes directly when creating the Document, instead of using the operation
 1234 attribute mechanism. Example: "document-overrides" = {"input-documents" = '5:5'; "media" =
 1235 'transparency'}
- 1236 6. **Job Level - document override programming** - The special "document-overrides" collection Job
 1237 Template attribute (see [override]) that contains the attributes that are to have the document override
 1238 status for the specified Input-Documents or Output-Documents. Supplied by the client when submitting a
 1239 job either in the protocol, or set by the user or operator after the job has been accepted either using the
 1240 Set-Job-Attributes operation, or by the operator using means local to the Printer. Example: "document-
 1241 overrides" = {"input-documents" = '5:5'; "media" = 'transparency'}
- 1242 7. **Job Level - Job object and Document object attributes** - The Job attributes and Document attributes
 1243 supplied at the Job Level, i.e., with a Create-Job, Print-Job, or Print-URI operation. Supplied by the
 1244 client when submitting a Job in the protocol, or set by the user or operator after the job has been
 1245 accepted either using the Set-Job-Attributes operation, or by the operator using means local to the
 1246 Printer. Examples: "media" = 'na-letter' and "copies" = '2'.
- 1247 8. **PDL document data** - an instruction in the PDL document data. Supplied by the application or print
 1248 driver that created the PDL. Example: PostScript setPageDevice specifying na-letter media. Whether
 1249 PDL document data is actually lower precedence than the preceding levels depends on the
 1250 implementation as expressed in the "pdl-override-supported" Printer Description attribute (see
 1251 [RFC2911] section 4.4.28 and [prod-print2] section 8.1).
 1252
 1253 Job Template and Document Template attributes of the form "xxx-requested", such as "orientation-
 1254 requested" (see [RFC2911] section 4.2.10) have a lower priority than the PDL. If the PDL contains a
 1255 corresponding instruction, that PDL instruction will be used instead of the supplied "xxx-requested"
 1256 attribute. For example, PostScript PDL data always has a well-defined orientation, so that "orientation-
 1257 requested" never affects the result. On the other hand, PDLs such as text/plain never has orientation
 1258 and PCL NEED NOT have orientation, in which case, "orientation-requested" takes affect.
- 1259 9. **PDL Init File data** - a file that the Printer uses to initialize the PDL Interpreter before it starts interpreting
 1260 each document in a Job. See description of "pdl-init-file" Job Template attribute in [prod-print2] Section
 1261 5.8. It is immaterial how this file is specified, whether it be by a queue override, job object attribute or
 1262 printer default – the precedence of the contents of this file is at this level.
- 1263 10. **printer default** - a Printer "xxx-default" attribute that is applied by the Printer provided that none of the
 1264 higher levels have supplied a value. The Printer implementation MUST supply values for all of the
 1265 Printer's "xxx-default" attributes that reflect the out-of-the-box action by the output device. For example,
 1266 if the output device will use media from the large-capacity input tray if not directed otherwise, the
 1267 implementation MUST supply the Printer's "media-default" attribute with the 'large-capacity' keyword
 1268 value without requiring the administrator to configure that value. The implementation MUST allow the
 1269 administrator to configure the Printer's "xxx-default" attributes to other values, if other value are
 1270 supported by the implementation. Example: The administrator changes the Printer's "media-default"
 1271 from 'large-capacity' to 'na-letter'.
- 1272 Note: Because of the requirement that the implementation supply pre-configured values for the
 1273 Printer's "xxx-default" attributes, there is no need for a lower "hardware default" precedence
 1274 level.

1275 **6 Operation Attributes for the Job and Document Creation operations**

1276 This section lists *all* the Operation attributes that have been defined in other IPP specifications that are used in Job
 1277 Creation operations and extends their use to the Document Creation operations defined in the IPP specification.
 1278 Operation attributes relate to the operation and do not depend on the printing capabilities of the Printer.

1279 **6.1 Operation Attributes supplied at the Job and Document Levels for Creation**

1280 Table 6 lists the Operation attributes that clients supply at the Job Level and/or the Document Level. The value of
 1281 the “ipp-attribute-fidelity” operation attribute (see section 6.2.1) does *not* affect the Printer’s handling of the other
 1282 operation attributes, only its handling of the Job Template and Document Template attributes (see section 7).

1283 The “Level Supplied” column indicates whether the Operation attribute can be supplied at the Job Level (Print-Job,
 1284 Print-URI, and Create-Job) and at the Document Level (Create-Document, Send-Document, and Send-URI) . The
 1285 Conformance column indicates the conformance requirements for what the client supplies in a request and the
 1286 Printer supports in a request. The Reference and Section columns list the IETF or IEEE-ISTO specification which
 1287 defines the semantics of the attribute.

1288 Legend:

- 1289 **[job-]** indicates an attribute that shouldn’t have had a “job-” prefix in its name in [RFC2911], so that the same
 1290 attribute name could also be used for the Document object as a Document Description attribute. Note: For
 1291 the PWG Semantic Model, the “job-” prefix is dropped.
- 1292 “-” indicates that the Job or Document attribute is *not* defined.
- 1293 * these operation attributes are defined for *all* operations, not just Job Creation and Document Creation
 1294 operations
- 1295 ** the Printer **MUST** copy these operation attributes to the corresponding Job Description or Document
 1296 Description attributes. See Table 9 for the corresponding Job and Document Description attributes.

1297 **Table 6 - Operation Attributes supplied at the Job and Document Levels in Creation Requests**

Operation attribute name for Job and Document Creation requests	Attribute Syntax	Level Supplied		Conformance		Reference
		Job	Doc	Client supply	Printer support	
attributes-charset * **	charset	y	y	MUST	MUST	[RFC2911] §3.1.4
attributes-natural-language * **	naturalLanguage	y	y	MUST	MUST	[RFC2911] §3.1.4
compression **	type3 keyword	y ⁹	y	MAY	MUST	[RFC2911] §3.2.1.1
document-format **	mimeMediaType	y ¹⁰	y	MAY	MUST	[RFC2911] §3.2.1.1
document-mandatory-attributes **	1setOf type2 keyword	-	y	MAY	MAY	[this spec] §6.2.3
document-message * **	text(127)	-	y	MAY	MAY	[this spec] §8.10
document-name **	name(MAX)	y ¹¹	y	MAY	MUST	[RFC2911] §3.2.1.1

⁹ The “compression”, “document-format”, “document-name”, and “document-natural-language” MAY be supplied in the Create-Job Job Creation operation as an extension to [RFC2911] as specified in [override]. If supplied in any Job Creation operation, the Printer copies them to corresponding Job Description attributes for subsequent Job query. These supplied attributes become defaults for the Documents in the job and used if the client does not supply the corresponding operation attribute in the Send-Document or Send-URI Document Creation operation. **ISSUE 04: With the Document object, do we want to also defines Job Description attributes for: “compression”, “document-format”, “document-name”, “document-natural-language”, since they are really Document attributes?**

¹⁰ See long footnote for the “compression” operation attribute in this table.

¹¹ See long footnote for the “compression” operation attribute in this table.

Operation attribute name for Job and Document Creation requests	Attribute Syntax	Level Supplied		Conformance		Reference

requesting-user-name *	name(MAX)	y	y	SHOULD	MUST	[RFC2911] §3.2.1.1

¹² See long footnote for the "compression" operation attribute in this table.

¹³ According to [override] section 9.2.2, the "document-overrides" (collection) attribute MAY be supplied by the client in a Send-Document or Send-URI request as an Operation attribute to apply document overrides to this and/or subsequent documents in the job. The Printer MUST merge this operation attribute into the "document-overrides" Document Template attribute, if any. See the "page-overrides" Job Template attribute in Table 8 for the listing of the member attributes. However, with the introduction of the Document object, the "document-overrides" (collection) attribute SHOULD NOT be used (either as a Job Template attribute or an Operation attribute). Instead, the client simply supplies the Document Template attributes (see Table 8) for each Document Creation request (in a new Document Template attribute group) without needing a collection.

¹⁴ The "document-uri" operation attribute MUST be supplied in the Print-URI Job Creation operation and the Send-URI Document Creation operation, MAY be supplied in a Validate-Document operation, and MUST NOT be supplied in other operations.

¹⁵ The "input-document-number" operation attribute sets the Document's "document-number" Document Description attribute (see section 8.1).

¹⁶ According to [override] section 9.2.3, the "page-overrides" (collection) attribute MAY be supplied by the client in a Send-Document or Send-URI request as an Operation attribute to apply page overrides to this and/or subsequent documents in the job. The Printer MUST merge this operation attribute into the "page-overrides" Document Template attribute, if any. See the "page-overrides" Job Template attribute in Table 8 for the listing of the member attributes. However, with the introduction of the Document object, the "page-overrides" (collection) attribute SHOULD be more simply supplied as one of the Document Template attributes for this document only.

¹⁷ The Printer copies the "printer-uri" operation attribute to the Job's "job-printer-uri" Job Description attribute.

Operation attribute name for Job and Document Creation requests	Attribute Syntax	Level Supplied		Conformance		Reference
		Job	Doc	Client supply	Printer support	
version-number *	X.Y	y	y	MUST	MUST	[RFC2911] §3.1.8

1298 * and **. See Legend at the beginning of the Table.

1299 **6.2 Operation Attributes defined for use in Document Creation operations**

1300 This section defines extensions to existing Operation attributes in Job and Document Creation operations and new
 1301 Operation attributes for use in Document Creation operations.

1302 **6.2.1 ipp-attribute-fidelity (boolean) (RFC2911) sections 3.2.1 and 15)**

1303 This operation attribute indicates whether or not the Printer MUST honor all supplied Job Template and Document
 1304 Template attributes in the Job Creation and Document Creation operation, respectively. The client MAY supply this
 1305 attribute in Job Creation and Document Creation operations. The Printer MUST support this attribute in Job Creation
 1306 and Document Creation operations. The value 'true' indicates that total fidelity to client supplied Job Template and
 1307 Document Template attributes and values is required, else the Printer MUST reject the request. The value 'false'
 1308 indicates that a reasonable attempt to print the Job or Document object is acceptable and the Printer object MUST
 1309 accept the request. If not supplied, the Printer assumes the value is 'false'. All Printer implementations MUST
 1310 support both types of job processing. See [RFC2911] section 15 for a full description of "ipp-attribute-fidelity" and its
 1311 relationship to other attributes, especially the Printer object's "pdl-override-supported" attribute.

1312 **6.2.2 job-mandatory-attributes (1setOf type2 keyword)**

1313 This operation attribute identifies which Job Template attributes the Printer MUST honor, in a Job Creation operation,
 1314 otherwise, the Printer MUST reject the operation. The client MAY supply this attribute in Job Creation operations.
 1315 The Printer MUST support this attribute in Job Creation operations. The Printer MUST ignore this attribute if the
 1316 client supplies the "ipp-attribute-fidelity" operation attribute (see section 6.2.1) with a 'true' value, since a 'true' value
 1317 indicates that the Printer MUST honor all supplied Job Template and Document Template attributes.

1318 The values of the "job-mandatory-attributes" attribute are the keyword attribute names that identify Job Template
 1319 attributes, for example, 'job-hold-until', 'job-finishing' (see section 7.1.4), 'copies' and 'media'. In order to identify a
 1320 member attribute of a collection attribute, the keyword names of both the collection attribute and the member
 1321 attribute are given separated by a period (.) character. For example, to make the "media" attribute of the "cover-
 1322 front" collection attribute mandatory, supply the keyword value: 'cover-front.media'.

1323 **6.2.3 document-mandatory-attributes (1setOf type2 keyword)**

1324 This operation attribute identifies which Document Template attributes the Printer MUST honor in a Document
 1325 Creation operation, otherwise, the Printer MUST reject the operation. The client MAY supply this attribute in
 1326 Document Creation operations. The Printer MUST support this attribute in Document Creation operations. The
 1327 Printer MUST ignore this attribute if the client supplies the "ipp-attribute-fidelity" operation attribute (see section 6.2.1)
 1328 with a 'true' value, since a 'true' value indicates that the Printer MUST honor all supplied Job Template attributes and
 1329 Document Template attributes.

1330 The values of the "document-mandatory-attributes" attribute are the keyword attribute names that identify Document
 1331 Template attributes, for example, 'copies' and 'media'. In order to identify a member attribute of a collection attribute,
 1332 the keyword names of both the collection attribute and the member attribute are given separated by a period (.)
 1333 character. For example, to make the "media" attribute of the "cover-front" collection attribute mandatory, supply the
 1334 keyword value: 'cover-front.media'.

1335 6.3 Operation Attributes returned in Job and Document Creation responses

1336 Table 7 lists the Operation attributes that Printers return in Job Creation operation *responses*: Print-Job, Print-URI,
 1337 and Create-Job and in Document Creation operation *responses*: Send-Document and Send-URI. The column
 1338 labeled “Conformance” indicates the conformance for what the Printer returns and what the Printer supports. The
 1339 Reference and Section columns list the IETF or IEEE-ISTO specification which defines the semantics of the attribute.

1340 **Table 7 - Operation attributes returned in Job and Document Creation operation responses**

Operation attribute name	Attribute Syntax Values	Conformance		References
		Printer return	Printer support	
attributes-charset *	charset	MUST	MUST	[RFC2911] §3.1.4
	‘utf-8’	MAY	MUST	[RFC2911] §4.1.7
	‘us-ascii’	MAY	MAY	[RFC2911] §4.1.7
	‘iso-8859-1’	MAY	MAY	[RFC2911] §4.1.7
	‘iso-10646-ucs-2’	MAY	MAY	[RFC2911] §4.1.7
attributes-natural-language *	naturalLanguage	MUST	MUST	[RFC2911] §3.1.4

job-id	integer(1:MAX)	MUST	MUST	[RFC2911] §4.3.2
job-uri	uri	MUST	MUST	[RFC2911] §4.3.1
redirect-uri (uri) ¹⁸	uri	MAY	MAY	[not-srv] §5.2
request-id *	integer(1:32767)	MUST	MUST	[RFC2911] §3.1.2
status-code *	integer(0:32767)	MUST	MUST	[RFC2911] §3.1.6.1
status-message *	text(255)	MAY	MAY	[RFC2911] §3.1.6.2
version-number *	integer(1:255), integer(0:255)	MUST	MUST	[RFC2911] §3.1.8

1341 * - indicates attributes that are defined for *all* operations, not just Job Creation operations

1342

1343 7 Job Template and Document Template attributes

1344 Table 8 lists *all* of the Job Template attributes defined in other IPP specifications and lists their corresponding
 1345 Document Template attributes defined in this IPP specification. The Job Template attributes can be supplied in the
 1346 Job Creation operations: Print-Job, Print-URI, and Create-Job operations.

1347 A subset of these Job Template attributes (e.g., “document-format” and “media”, but not “job-priority”) are also
 1348 defined to apply to Documents and are called Document Template attributes when supplied at the Document Level.
 1349 Document Template attribute can be supplied in the Create-Document, Send-Document, and Send-URI operations.

¹⁸ The Printer or Notification Server returns the “redirect-uri” operation attribute in order to redirect the Get-Notification operation to a Notification Server or back to the original Printer.

1350 These Document Template attributes can also be supplied as Document Overrides using the “document-overrides”
 1351 Job Template attribute (see [overrides]).

1352 A subset of the Document Template attributes that apply to pages (e.g., “media”, but not “document-format” or “job-
 1353 priority”) can also be supplied as Page Overrides using the “page-overrides” Job Template collection attribute (see
 1354 [override]) or as a Document Template attribute.

1355 According to [override], the “document-overrides” (collection) attribute MAY be supplied by the client in a Send-
 1356 Document or Send-URI request as an Operation attribute to apply document overrides to this and/or subsequent
 1357 documents in the job. See the “document-overrides” Job Template attribute in Table 8 for the listing of the member
 1358 attributes. However, with the introduction of the Document object, the “document-overrides” (collection) attribute
 1359 SHOULD NOT be used (either as a Job Template attribute or an Operation attribute). Instead, the client simply
 1360 supplies the Document Template attributes (see Table 8) for each Document Creation request (in a new Document
 1361 Template attribute group) without needing a collection. A Printer MAY support “document-overrides” as specified in
 1362 [override] for backward compatibility with clients that don’t support the Document object.

1363 The “document-overrides” attribute is also useful in combination with the “pages-per-subset” attribute (see
 1364 [overrides]) which divides up the Input Page stream concatenated across the Input Documents into separate Output
 1365 Documents. For example, making every 10 Input Pages be a separate Output Document but the client only wants to
 1366 staple the first Output Document.

1367 Similarly, according to [override], the “page-overrides” (collection) attribute MAY be supplied by the client in a Send-
 1368 Document or Send-URI request as an Operation attribute to apply page overrides to this and/or subsequent
 1369 documents in the job. See the “page-overrides” Job Template attribute in Table 8 for the listing of the member
 1370 attributes. However, with the introduction of the Document object, the “page-overrides” (collection) attribute
 1371 SHOULD be more simply supplied as one of the Document Template attributes for the document being created only.
 1372 However, a Printer MAY also support the “page-overrides” attribute as an operation attribute for backward
 1373 compatibility with clients that do not support the Document object.

1374 The “Defined for use” column indicates whether the client MAY supply and the Printer support the attribute at the
 1375 Job, Document, or Page Level with the following semantics:

Supplied	Description
J=y:	Job Level: The attributes MAY be supplied as Job Template attributes at the Job Level in a Job Creation request (Print-Job, Print-URI, Create-Job) in which case each Document inherits the Job Template attribute as a default which is used unless an attribute at the document level is also supplied. Note: The “multiple-document-handling” attribute controls whether extensive attributes, such as “finishing”, “copies”, affect the entire job as a whole (‘single-xxx’ values) or affect each document separately (‘separate-xxx’ values).
D=y:	Document Level: The attribute MAY be supplied at the Document Level as Document Template attributes in a Document Creation operation (Send-Document, Send-URI), in which case the supplied Document Templates override any Job Template attributes supplied at the Job Level and any “document-overrides” supplied at the Job or Document level.
P=y:	Page Level: The attribute MAY be supplied as a member of the (1) “page-ranges” Job Template attribute at the Job Level in a Job Creation operation or (2) “page-ranges” Document Template attribute at the Document Level to affect the specified range of pages.

1376 Job Template and Document Template attributes are OPTIONAL for a Printer to support and for a client to supply in
 1377 a Job Creation or Document Creation request or a Document Overrides or Page Overrides. If a Printer supports a
 1378 Job Template or Document Template attribute, then it MUST copy the supplied attribute to the Job or Document
 1379 object, respectively so that a client MAY query the attributes in subsequent Get-Job-Attributes/Get-Jobs and Get-
 1380 Document-Attributes/Get-Documents operations, respectively. The effect of Job Template Attributes supplied in Job
 1381 Creation requests are inherited by the Document objects, unless the Document Creation operation supplies the
 1382 attribute with a different value.
 1383

1384 If a Job Template collection attribute is supported (see [coll]), then there are conformance requirements for which
 1385 member attributes MUST be supported and which member attributes a client MUST supply as indicated in the
 1386 Conformance column for each collection member attribute in Table 8.

1387 **Table 8 - Job Template and Document Template attributes**

Job Template / Document Template attribute name	Attribute Syntax	Defined for use			Conformance		Reference
		J	D	P	Client supply	Printer support	
copies	integer(1:MAX)	y ¹⁹	y	n	MAY	MAY	[RFC2911] §4.2.5
cover-back	collection	y	y	n	MAY	MAY	[prod-print] §3.1
cover-type	type2 keyword				MUST	MUST	[prod-print] §3.1.2
media	type3 keyword name(MAX)				MAY be neither or one of, but NOT both	MUST	[prod-print] §3.1.1
media-col	collection					MAY	[prod-print] §3.1.1
cover-front	collection	y	y	n	MAY	MAY	[prod-print] §3.1
cover-type	type2 keyword				MUST	MUST	[prod-print] §3.1.2
media	type3 keyword name(MAX)				MAY be neither or one of, but NOT both	MUST	[prod-print] §3.1.1
media-col	collection					MAY	[prod-print] §3.1.1
document-overrides	collection	y	y ²⁰	n	MAY	MAY	[override] §5.1
input-documents ²¹	1setOf rangeOfInteger(MAX)				MUST be one or the other, but NOT both	MUST	[override] §5.1.1
output-documents	1setOf rangeOfInteger(MAX)					MUST	[override] §5.1.2
document-copies	1setOf rangeOfInteger(MAX)				MAY	MAY	[override] §5.1.3
document-format	mimeMediaType				MAY	MUST	[override] §5.1.4
document-name	name (MAX)				MAY	MUST	[override] §5.1.5
compression	type3 keyword				MAY	MUST	[override] §5.1.6
document-natural-language	naturalLanguage				MAY	MAY	[override] §5.1.7
page-ranges	1setOf rangeOfInteger (1:MAX)				MAY	MAY	[override] §5.1.8
<i>any other Job Template attributes that affect documents, such as "media" or "media-col"</i>					MAY	MAY	
feed-orientation	type3 keyword	y	y	n	MAY	MAY	[prod-print2] §5.1

¹⁹ The IPP "copies" attribute is an *extensive* attribute, so its effect when supplied at the job level is not always inherited by the documents in a multi-document job. Instead, its effect depends on the value of the "multiple-document-handling" Job Template attribute. The 'single-document' and 'single-document-new-sheet' values produce copies of the job as a whole with the multiple input documents concatenated into a single output document for each job copy. The 'separate-document-uncollated-copies' value produce N copies of the first input document followed by N copies of the second input document, etc. The 'separate-document-collated-copies' produce N successive job copies, each job copy consisting of 1 copy of the first document followed by 1 copy of the second document, etc.

²⁰ The client can supply the "document-overrides" operation attribute in the Send-Document or Send-URI operations (see [override]).

²¹ The Printer MUST support "document-format", "document-name", "compression", "document-natural-language", and "page-ranges" with the "input-documents" member attribute, but not the "output-documents" member attribute.

Job Template / Document Template attribute name	Attribute Syntax	Defined for use			Conformance		Reference
		J	D	P	Client supply	Printer support	
finishings	1setOf type2 enum	y ²²	y	y	MAY be neither or one of, but NOT both	MAY, MUST if "finishing-col" is supported	[RFC2911] §4.2.6 [finish] §2
finishings-col	collection	y ⁹	y	y		MAY	[prod-print] §3.2
finishing-template	name(MAX)				MAY	MAY	[prod-print] §3.2.1

font-size-requested	integer (1:MAX)	y	y	y	MAY	MAY	[prod-print2] §5.3
force-front-side	1setOf integer(1:MAX)	y ²³	y	y	MAY	MAY	[prod-print] §3.3
imposition-template	type2 keyword name(MAX)	y	y	y	MAY	MAY	[prod-print] §3.4
insert-sheet	1setOf collection	y ¹⁰	y	y	MAY	MAY	[prod-print] §3.5
insert-after-page-number	integer(0:MAX)				MUST	MUST	[prod-print] §3.5.1
insert-count	integer(0:MAX)				MAY	MUST	[prod-print] §3.5.2
media	type3 keyword name(MAX)				MUST be one or the other, but NOT both	MUST	[prod-print] §3.5.3
media-col	collection					MAY	[prod-print] §3.5.3
job-accounting-id	name(MAX)	y	n	n	MAY	MAY	[prod-print] §3.6
job-accounting-sheets	collection	y	n	n	MAY	MAY	[prod-print] §3.8
job-accounting-sheets-type	type3 keyword name(MAX)				MUST	MUST	[prod-print] §3.8.1
media	type3 keyword name(MAX)				MAY be neither or one of, but NOT both	MUST	[prod-print] §3.8.2
media-col	collection					MAY	[prod-print] §3.8.2
job-accounting-output-bin	type3 keyword name(MAX)				MAY	MAY	[prod-print] §3.8.3
job-accounting-user-id	name(MAX)	y	n	n	MAY	MAY	[prod-print] §3.7
job-copies	integer(1:MAX)	y	n ²⁴	n	MAY	MAY	[this spec] §7.1.1

²² The IPP "finishings" and "finishings-col" attributes are *extensive* attributes, so their effect when supplied at the Job Level is not always inherited by the documents in a multi-document job. Instead, their effect depends on the value of the "multiple-document-handling" Job Template attribute. The 'single-document' and 'single-document-new-sheet' cause the finishing to be applied to each job copy as a whole. The 'separate-documents-collated-copies' and 'separate-document-uncollated-copies' values cause the finishing to be applied to each document.

²³ The effect of the IPP "force-front-side" and "insert-sheet" attributes when supplied at the job level of a multi-document job depends on the value of the "multiple-document-handling" Job Template attribute. For the 'single-document' and 'single-document-new-sheet' values, the pages are numbered as a single set from 1 to n for the job as a whole. For the 'separate-documents-collated-copies' and 'separate-document-uncollated-copies' values, the pages are numbered from 1 to n for each document separately.

²⁴ The "job-copies" Job Template attribute MUST NOT be supplied at the Document or Page Level. The "job-copies" Job Template attribute was introduced for use in clients or Printers that don't support "multiple-document-handling" = 'single-document' or 'single-document-new-sheet'.

job-save-disposition	collection	y	n	n	MAY	MAY	[prod-print2] §5.7
save-disposition	type3 keyword	y	n	n	MAY	MAY	[prod-print2] §5.7.1.1
save-info	1setOf collection	y	n	n	MAY	MAY	[prod-print2] §5.7.1.2
save-location	uri	y	n	n	MAY	MAY	[prod-print2] §5.7.1.2.3.1
save-name	name(MAX)	y	n	n	MAY	MAY	[prod-print2] §5.7.1.2.3.2
save-document-format	mimeMediaType	y	n	n	MAY	MAY	[prod-print2] §5.7.1.2.3.3
job-sheet-message	text(MAX)	y	n	n	MAY	MAY	[prod-print] §3.12

²⁵ The “job-cover-back” Job Template attribute MUST NOT be supplied at the Document or Page Level. The “job-cover-back” Job Template attribute was introduced for use in clients or Printers that don’t support “multiple-document-handling” = ‘single-document’ or ‘single-document-new-sheet’.

²⁶ The “job-cover-front” Job Template attribute MUST NOT be supplied at the Document or Page Level. The “job-cover-front” Job Template attribute was introduced for use with clients or Printers that don’t support “multiple-document-handling” = ‘single-document’ or ‘single-document-new-sheet’.

²⁷ The “job-finishing” Job Template attribute MUST NOT be supplied at the Document or Page Level. The “job-finishings” Job Template attribute was introduced for use with clients or Printers that don’t support “multiple-document-handling” = ‘single-document’ or ‘single-document-new-sheet’.

²⁸ The “job-finishing-col” Job Template attribute MUST NOT be supplied at the Document or Page Level. The “job-finishings-col” Job Template attribute was introduced for use with clients or Printers that don’t support “multiple-document-handling” = ‘single-document’ or ‘single-document-new-sheet’.

²⁹ The “job-message-to-operator” Job Template attribute has no corresponding Document Template attribute. Instead, the user and operator communicate with each other using the same “document-message” operation attribute which the Printer copies to the “document-message” Document Description attribute.

Job Template / Document Template attribute name	Attribute Syntax	Defined for use			Conformance		Reference
		J	D	P	Client supply	Printer support

media-col	collection					MAY	[prod-print2] §5.8.1.2

³⁰ The effect of the IPP "page-overrides" Job Template attribute when supplied at the job level of a multi-document job depends on the value of the "multiple-document-handling" Job Template attribute. For the 'single-document' and 'single-document-new-sheet' values, the pages are numbered as a single set from 1 to n for the job as a whole. For the 'separate-documents-collated-copies' and 'separate-document-uncollated-copies' values, the pages are numbered from 1 to n for each document separately.

³¹ The effect of the IPP "page-ranges" Job Template attribute when supplied at the job level of a multi-document job depends on the value of the "multiple-document-handling" Job Template attribute. For the 'single-document' and 'single-document-new-sheet' values, the pages are numbered as a single set from 1 to n for the job as a whole. For the 'separate-documents-collated-copies' and 'separate-document-uncollated-copies' values, the pages are numbered from 1 to n for each document separately.

³² The IPP "pages-per-subset" Job Template attribute MUST be supplied at the Job Level and can only be used when the "multiple-document-handling" Job Template attribute is 'separate-documents-collated-copies' or 'separate-documents-uncollated-copies', since the purpose of the "pages-per-subset" attribute is to produce separate output documents for each subset. Otherwise, the Printer MUST ignore the "pages-per-subset" attribute.

1388

1389 **7.1 Job Template attributes defined for use with the Document object**

1390 This section defines additional Job Template attributes for use with the Document object.

1391 **7.1.1 job-copies (integer(1:MAX))** **Job Template attribute**

1392 This attribute specifies the number of job copies, i.e., with all of the Document objects taken together. Its
 1393 interpretation is independent of the value of the “multiple-document-handling” Job Template attribute. See the
 1394 “copies” Job Template attribute defined in [RFC2911] section 4.2.5 which switches between job copies and
 1395 document copies depending on the value of the “multiple-document-handling” Job Template attribute.

1396 **7.1.2 job-cover-back (collection)** **Job Template attribute**

1397 This attribute specifies the cover for the back of the job, i.e., with all of the Document objects taken together and is
 1398 independent of the value of the “multiple-document-handling” Job Template attribute. The member attributes are the
 1399 same as “cover-back” (see [prod-print] section 3.1). However, the “cover-back” Job Template attribute switches
 1400 between a job back cover and a document back cover depending on the value of the “multiple-document-handling”
 1401 Job Template attribute.

1402 **7.1.3 job-cover-front (collection)** **Job Template attribute**

1403 This attribute specifies the cover for the front of the job, i.e., with all of the Document objects taken together and is
 1404 independent of the value of the “multiple-document-handling” Job Template attribute. The member attributes are the
 1405 same as the “cover-front” Job Template attribute (see [prod-print] section 3.2). However, the “cover-front” Job
 1406 Template attribute switches between a job front cover and a document front cover depending on the value of the
 1407 “multiple-document-handling” Job Template attribute.

1408 **7.1.4 job-finishings (1setOf type2 enum)** **Job Template attribute**

1409 This attribute specifies the job finishings, i.e., with all of the Document objects taken together. Its interpretation is
 1410 independent of the value of the “multiple-document-handling” Job Template attribute. See the “finishings” Job

1411 Template attribute defined in [RFC2911] section 4.2.6 which switches between job finishings and document
1412 finishings depending on the value of the “multiple-document-handling” Job Template attribute.

1413 7.1.5 job-finishings-col (1setOf collection)

Job Template attribute

1414 This attribute specifies the job finishings collection, i.e., with all of the Document objects taken together. Its
1415 interpretation is independent of the value of the “multiple-document-handling” Job Template attribute. See the
1416 “finishings” Job Template attribute defined in [RFC2911] section 4.2.6 which switches between job finishings
1417 collection and document finishings collection depending on the value of the “multiple-document-handling” Job
1418 Template attribute.

1419 8 Job Description and Document Description attributes

1420 Table 9 lists all the Job Description defined in other IPP specifications and the corresponding Document Description
1421 attributes defined in this IPP specification. Job Description and Document Description attributes are Job object and
1422 Document object attributes, respectively, that are filled in by the Printer. Some Job/Document Description attribute
1423 values are supplied by the client in the Job/Document Creation operation using corresponding Operation attributes
1424 as flagged with “**”.

1425 The column labeled “attribute syntax” indicates the attribute syntax (see [RFC2911] section 4.1). The Printer
1426 conformance is indicated along with the reference to the specification in which the attribute is defined. The
1427 conformance for Document Description attributes (if the Printer supports the Document object) is the same as the
1428 corresponding Job Description attributes.

1429 Note: There are no corresponding Page Range (or Page Override) Description attributes. The Page Range is not an
1430 object with a state and it cannot be queried.

1431 Legend:

- 1432 **[job-]** indicates an attribute that shouldn't have had a “job-” prefix in its name in [RFC2911], so that the same
1433 attribute name could also be used for the Document object as a Document Description attribute. Note: For
1434 the PWG Semantic Model, the “job-” prefix is dropped.
- 1435 “_” indicates that the Job or Document attribute is *not* defined.
- 1436 ** indicates a Job and/or Document Description attribute that the client MAY supply the values for in a
1437 corresponding Operation attribute. See Table 6 for the corresponding operation attribute.
- 1438 (r/w) indicates that the Job Description or Document Description attribute is read/write, so that the client can
1439 changes its value using the Set-Job-Attributes or Set-Document-Attributes operation (see section 3.8).

1440

Table 9 - Job and Document Description attributes

IPP Job Description / Document Description attribute name	IPP Attribute Syntax	Job	Doc	Printer conformance	Reference
attributes-charset **	charset	y	y	MUST	[RFC2911] §4.3.19
attributes-natural-language **	naturalLanguage	y	y	MUST	[RFC2911] §4.3.20

[job-]media-sheets-completed	integer(0:MAX)	y	y	MAY	[RFC2911] §4.3.18.3
job-message-from-operator	text(127)	y	- ³⁵	MAY	[RFC2911] §4.3.16
[job-]more-info	uri	y	y	MAY	[RFC2911] §4.3.4
job-name (r/w)	name(MAX)	y	- ³⁶	MUST	[RFC2911] §4.3.5
job-originating-user-name	name (MAX)	y	-	MUST	[RFC2911] §4.3.6
job-printer-make-and-model	text(127)	y	-	CMUST ³⁷	[RFC2911] §4.3.14.4
job-printer-up-time	integer (1:MAX)	y		MUST	[RFC2911] §4.3.14.4
job-printer-uri	uri	y	-	MUST	[RFC2911] §4.3.3
job-state	type1 enum	y	- ³⁸	MUST	[RFC2911] §4.3.7
job-state-message	text(MAX)	y	- ³⁹	MAY	[RFC2911] §4.3.9
job-state-reasons	1setOf type2 keyword	y	- ⁴⁰	MUST	[RFC2911] §4.3.8

³³ The “document-message” (text(127)) Document Description attribute has a corresponding “job-message-from-operator” (text(127)) Job Description attribute (see [RFC2911] section 4.3.16) which handles operator to user communication only and a “job-message-to-operator (text(MAX)) Job Template attribute (see [prod-print] section 3.10) for user to operator communication.

³⁴ The Document Description attribute that corresponds to the “job-id” Job Description attribute is the (new) “document-number” attribute.

³⁵ The “job-message-from-operator” Job Description attribute has no corresponding “document-message-from-operator” (text(127)) Document Description attribute. Instead, both the user and the operator use the “document-message” (text(127)) operation/Document Description attribute (see section 8.10) to communicate with each other.

³⁶ The Document Description attribute that corresponds to the “job-name” Job Description attribute is the (existing) “document-name” attribute defined in [RFC2911].

³⁷ The “job-printer-make-and-model” Job Description attribute MUST be supported if the “job-save-disposition” Job Template attribute is supported.

³⁸ The Document Description attribute that corresponds to the “job-state” Job Description attribute is the (new) “document-state” attribute.

³⁹ The Document Description attribute that corresponds to the “job-state-message” Job Description attribute is the (new) “document-state-message” attribute.

IPP Job Description / Document Description attribute name	IPP Attribute Syntax	Job	Doc	Printer conformance	Reference
job-uri	uri	y	- ⁴¹	MUST	[RFC2911] §4.3.1

time-at-creation	integer (MIN:MAX)	y	y	MUST	[RFC2911] §4.3.14.1
time-at-processing	integer (MIN:MAX)	y	y	MUST	[RFC2911] §4.3.14.2

1441 *** See the description in the Legend before the table.

1442
 1443 Most of the existing “job-state” and “job-state-reasons” Job Description attribute values apply equally well to
 1444 individual documents in a multi-document job (with removal of the ‘job-’ prefix for those that apply to both Job and
 1445 Document). Furthermore, the job states are completely service-type neutral, so they can apply to scanning, faxing,
 1446 formatting processes as well. The job state reasons have a number of reasons that are print service specific, but
 1447 most can apply to other types of service as well. The reason for separating state from reasons, is so that the states
 1448 can be the fundamental states that most implementations have, while the state reasons can vary depending on the
 1449 sophistication of the system. The states are the ones that clients are most likely to base actions upon, and the state
 1450 reasons are more information, both for programs and people.

1451 The descriptions of the new “document-state” and “document-state-reasons” attributes are merged in with the
 1452 existing “job-state” and “job-state-reasons”. Such merging shows the parallelism in the description to aid
 1453 understanding and implementation and so that future maintenance will continue this strong parallelism. The “/”
 1454 character separates the words: Job from Document so that the same description can serve for both Job and
 1455 Document objects.

1456 **8.1 document-number (integer(1:MAX)) Document Description attribute**

1457 This REQUIRED Document Description attribute is the ordinal number of the document within the job which
 1458 determines its order of being printed in a multi-document job. The Printer generates the values monotonically
 1459 increasing from 1 for a job. However, the client MAY supply the value in the “input-document-number” operation
 1460 attribute (see section 3.1.1.1).

1461 **8.2 document-id-uri (uri) Document Description attribute**

1462 This REQUIRED Document Description attribute is generated by the Printer as a unique URI to identify a Document
 1463 object, in the same way that the “job-uri” (uri) Job Description attribute uniquely identifies a Job object. Unlike the
 1464 “job-uri” (uri) attribute, the client cannot supply this attribute as a target of an operation.

⁴⁰ The Document Description attribute that corresponds to the “job-state-reasons” Job Description attribute is the (new) “document-state-reasons” attribute.

⁴¹ The Document Description attribute that corresponds to the “job-uri” (uri) Job Description attribute is the (new) “document-id-uri” (uri) attribute. However, the value is only a unique ID. The client cannot use the “document-id-uri” attribute URI value as a target of a Document object operation; the “job-uri” has proved problematic enough as a target.

1465 **8.3 document-uri (uri)** **Document Description attribute**

1466 This Document Description attribute is the URI that the client supplied in a Send-URI operation. The Printer MUST
 1467 support this attribute if the Printer supports the Send-URI operation (see section 3.4).

1468 **8.4 job-state (type1 enum)** **Job Description attribute**

1469 **8.5 document-state (type1 enum)** **Document Description attribute**

1470 The REQUIRED "job-state" and the REQUIRED "document-state" attribute identify the current state of the job and
 1471 document, respectively. Even though IPP defines seven values for job/document states (plus the out-of-band
 1472 'unknown' value - see [RFC2911] section 4.1), implementations only need to support those states which are
 1473 appropriate for the particular implementation. In other words, an IPP Printer object implementation supports only
 1474 those job/document states implemented by the output device and available to the IPP Printer object implementation.

1475 Table 10 lists the "job-state" and "document-state" attribute values.

1476 **Table 10 - "job-state" and "document-state" attribute values**

Values	"job-state"	"document-state"
3 pending	y	y
4 pending-held	y	n/a
5 processing	y	y
6 processing-stopped	y	n/a
7 canceled	y	y
8 aborted	y	y
9 completed	y	y

1477

1478 The (JD) and (J) notation below indicates whether the keyword is defined for the "job-state" and "document-state"
 1479 attributes or just the "job-state" attribute as indicated in Table 10. Standard enum values are:

Value	Symbolic Name and Description
'3'	'pending' (JD): The job is a candidate to start processing, but is not yet processing. The document has not started to be processed at all.
'4'	'pending-held' (J): The job is not a candidate for processing for any number of reasons but will return to the 'pending' state as soon as the reasons are no longer present. The job's "job-state-reason" attribute MUST indicate why the job is no longer a candidate for processing. The 'pending-held' state does not apply to the Document object's "document-state" attribute.
'5'	'processing' (JD): One or more of: <ol style="list-style-type: none"> 1. The job is using, or is attempting to use, one or more purely software processes that are analyzing, creating, or interpreting a PDL, etc., 2. The job is using, or is attempting to use, one or more hardware devices that are interpreting a PDL, making marks on a medium, and/or performing finishing, such as stapling, etc., 3. The Printer object has made the job ready for printing, but the output device is not yet printing it, either because the job hasn't reached the output device or because the job is queued in the output device or some other spooler,

Value	Symbolic Name and Description
	awaiting the output device to print it.
	When the job is in the 'processing' state, the entire job/document state includes the detailed status represented in the Printer object's "printer-state", "printer-state-reasons", and "printer-state-message" attributes.
	On the other hand, the 'processing' state for the Document indicates that the Document has begun to be processed. Even if the job stops being processed, the Document remains in the 'processing' state until it moves to one of the three terminal states.
	Implementations MAY, though they NEED NOT, include additional values in the job's/document's "job-state-reasons"/"document-state-reasons" attribute to indicate the progress of the job/document, such as adding the 'job-printing'/'printing' value to indicate when the output device is actually making marks on paper and/or the 'processing-to-stop-point' value to indicate that the Printer is in the process of canceling or aborting the job/document. Most implementations won't bother with this nuance.
'6'	'processing-stopped' (J): The job has stopped while processing for any number of reasons and will return to the 'processing' state as soon as the reasons are no longer present.
	The job's "job-state-reason" attribute MAY indicate why the job has stopped processing. For example, if the output device is stopped, the 'printer-stopped' value MAY be included in the job's "job-state-reasons" attribute.
	Note: When an output device is stopped, the device usually indicates its condition in human readable form locally at the device. A client can obtain more complete device status remotely by querying the Printer object's "printer-state", "printer-state-reasons" and "printer-state-message" attributes.
	The 'processing-stopped' state does not apply to the Document object's "document-state" attribute.
'7'	'canceled' (JD): The job/document has been canceled by a Cancel-Job/Cancel-Document operation and the Printer object has completed canceling the job/document and all job/document status attributes have reached their final values for the job/document. While the Printer object is canceling the job/document, the job/document remains in its current state, but the job's/document's "job-state-reasons"/"document-state-reasons" attribute SHOULD contain the 'processing-to-stop-point' value and one of the 'canceled-by-user', 'canceled-by-operator', or 'canceled-at-device' value. When the job/document moves to the 'canceled' state, the 'processing-to-stop-point' value, if present, MUST be removed, but the 'canceled-by-xxx', if present, MUST remain.
'8'	'aborted' (JD): The job/document has been aborted by the system, usually while the job/document was in the 'processing' or 'processing-stopped' state and the Printer has completed aborting the job/document and all job/document status attributes have reached their final values for the job/document. While the Printer object is aborting the job/document, the job/document remains in its current state, but the job's/document's "job-state-reasons"/"document-state-reasons" attribute SHOULD contain the 'processing-to-stop-point' and 'aborted-by-system' values. When the job/document moves to the 'aborted' state, the 'processing-to-stop-point' value, if present, MUST be removed, but the 'aborted-by-system' value, if present, MUST remain.
'9'	'completed' (JD): The job/document has completed successfully or with warnings or errors after processing and all of the job/document media sheets have been successfully stacked in the appropriate output bin(s) and all job/document status attributes have reached their final values for the job/document. The job's/document's "job-state-reasons"/"document-

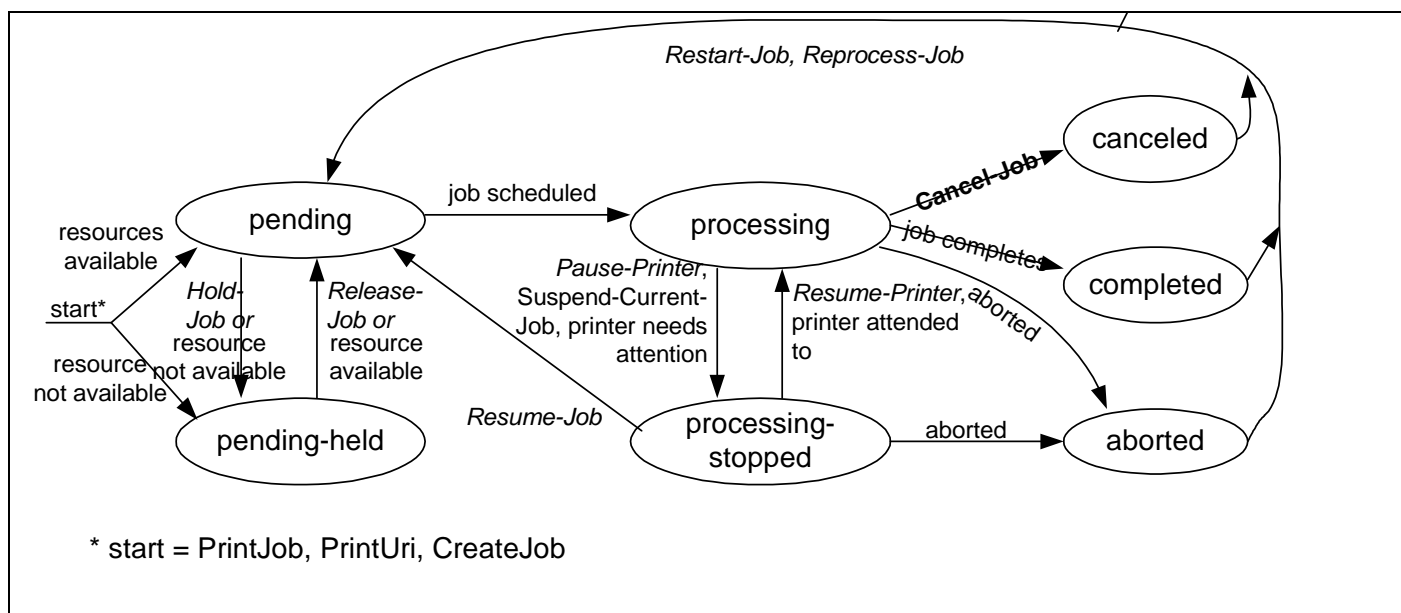

Value	Symbolic Name and Description
	state-reasons" attribute SHOULD contain one of: 'completed-successfully', 'completed-with-warnings', or 'completed-with-errors' values.

1480 The final value for this attribute MUST be one of: 'completed', 'canceled', or 'aborted' before the Printer removes the
 1481 job/document altogether. The length of time that jobs/document remain in the 'canceled', 'aborted', and 'completed'
 1482 states depends on implementation.

1483 Jobs/documents reach one of the three terminal states: 'completed', 'canceled', or 'aborted', after the jobs/documents
 1484 have completed all activity, including stacking output media, after the jobs/documents have completed all activity,
 1485 and all job/document status attributes have reached their final values for the job/document.

1486 **8.5.1 The “job-state” Job Description attribute and the Job Life Cycle**

1487 The “job-state” attribute is one of the most important Job Description attributes. Figure 1 shows the values of the
 1488 “job-state” attribute and the Job object life cycle as affected by actions on the Job, Printer, and job processing.

1489

1490 **Figure 1 - The “job-state” Job Description attribute and the Job object life cycle**

1490

1491 Normally a job progresses from left to right. Other state transitions are unlikely, but are not forbidden. Not shown
 1492 are the transitions to the 'canceled' state from the 'pending', 'pending-held', and 'processing-stopped' states.

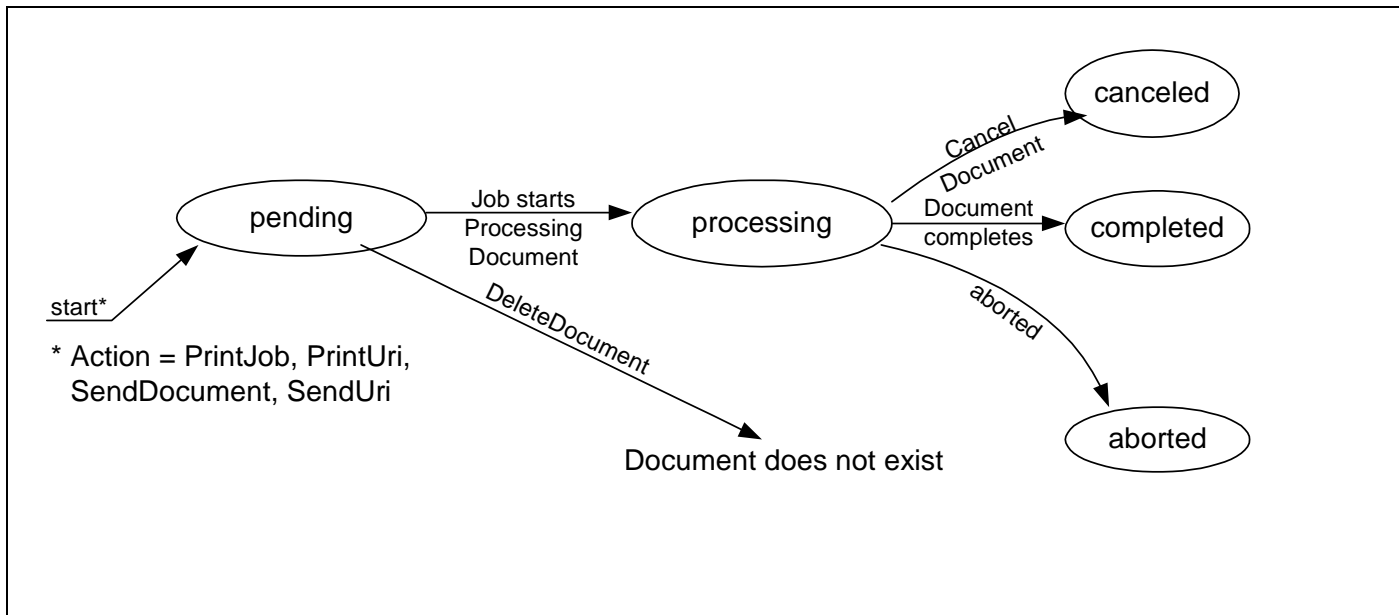

1493 **8.5.2 The “document-state” Document Description attribute and the Document object life**
 1494 **Cycle**

1495 The “document-state” attribute is one of the most important Document Description attributes. Figure 2 shows the
 1496 values of the “document-state” attribute and the Document object life cycle as affected by actions on the Job,
 1497 Document, Printer, and job processing. Documents are not active objects and their life cycle is closely tied to the
 1498 lifecycle of a Job⁴². Documents basically have three states. The first is waiting to be processed by a Job (i.e.

⁴² The Document object is not really a sub-job. If the Document object were its own independent active object, i.e., were a sub-job, then the Document state would affect the job state and there would be complex and debatable roll-up rules for how the various “document-state” values of all of the Job’s document are rolled up to give a single value for

1499 pending). The second state is from the time the Job first starts processing the Document (i.e., processing) and until it
 1500 reaches one of its terminal states. The third state for a Document is one of its terminal states (i.e., completed,
 1501 canceled, or aborted).

1502
 1503

1504

1505 **Figure 2 - The “document-state” Document Description attribute and the Document object life Cycle**

1505

1506 A Document object has a much simpler life cycle than a Job object. A Document always progresses from left to right
 1507 in the state diagram. No other state transitions are defined.

1507

1508 **8.5.3 Forwarding Servers**

1509 As with all other IPP attributes, if the implementation can not determine the correct value for this attribute, it SHOULD
 1510 respond with the out-of-band value 'unknown' (see [RFC2911] Section 4.1) rather than try to guess at some possibly
 1511 incorrect value and give the end user the wrong impression about the state of the Job/Document object. For
 1512 example, if the implementation is just a gateway into some printing system from which it can normally get status, but
 1513 temporarily is unable, then the implementation should return the 'unknown' value. However, if the implementation is
 1514 a gateway to a printing system that never provides detailed status about the print job/document, the implementation
 1515 MAY set the IPP Job/Document object's state to 'completed', provided that it also sets the 'queued-in-device' value in
 1516 the job's/document's "job-state-reasons"/"document-state-reasons" attribute (see "job-state-reasons"/"document-
 1517 state-reasons" attribute below).

1518 **8.5.4 Partitioning of Job/Document States**

1519 This section partitions the job/document states into phases: Job/Document Not Completed, Job/Document
 1520 Retention, Job/Document History, and Job/Document Removal. This section also explains the 'job-restartable' value
 1521 of the "job-state-reasons" Job Description attribute for use with the Restart-Job operation.

1522 **Job/Document Not Completed:** When a job is in the 'pending', 'pending-held', 'processing', or 'processing-stopped'
 1523 states, the job is not completed. When a Document is in the 'pending' or 'processing' state, it is not completed.

the Job's "job-state" attribute. Instead, the Job state reflects the overall processing of the job and is the same whether or not the Document object is supported.

1524 **Job Retention:** When a job enters one of the three terminal job states: 'completed', 'canceled', or 'aborted', the IPP
 1525 Printer object MAY "retain" the job in a restartable condition for an implementation-defined time period. This time
 1526 period MAY be zero seconds and MAY depend on the terminal job state. This phase is called Job Retention. While
 1527 in the Job Retention phase, the job's document data is retained and a client may restart the job using the Restart-Job
 1528 operation. If the Printer supports the Restart-Job operation, then it SHOULD indicate that the job is restartable by
 1529 adding the 'job-restartable' value to the job's "job-state-reasons" attribute (see Section 8.6) during the Job Retention
 1530 phase. If the Printer supports the Document object, then the Get-Document-Attributes and Get-Documents
 1531 operations MUST be supported while the job is in the Job Retention phase.

1532 **Job History:** After the Job Retention phase expires for a job, the Printer object deletes the document data for the
 1533 job and the job becomes part of the Job History. The Printer object MAY also delete any number of the job and
 1534 document attributes. Since the job is no longer restartable, the Printer object MUST remove the 'job-restartable'
 1535 value from the job's "job-state-reasons" attribute, if present. If the implementation supports the Document object, it
 1536 SHOULD retain at least the "document-state" and "document-state-reasons" attributes on the Document object
 1537 during the Job History phase which can be queried using the Get-Document-Attributes and Get-Documents
 1538 operations.

1539 **Job Removal:** After the job has remained in the Job History for an implementation-defined time, such as when the
 1540 number of jobs exceeds a fixed number or after a fixed time period (which MAY be zero seconds), the IPP Printer
 1541 removes the Job and Document objects from the system.

1542 Using the Get-Jobs/Get-Documents operation and supplying the 'not-completed' value for the "which-jobs" operation
 1543 attribute, a client is requesting jobs/documents in the Job/Document Not Completed phase. Using the Get-Jobs/Get-
 1544 Documents operation and supplying the 'completed' value for the "which-jobs" operation attribute, a client is
 1545 requesting jobs/documents in the Job Retention and Job History phases. Using the Get-Job-Attributes/Get-
 1546 Document-Attributes operation, a client is requesting a job/documents in any phase except Job Removal. After Job
 1547 Removal, the Get-Job-Attributes/Get-Documents and Get-Jobs/Get-Documents operations no longer are
 1548 capable of returning any information about a job/document.

1549 NOTE: The semantics of this attribute or the set of valid values may be different for different document formats.

1550 **8.6 job-state-reasons (1setOf type2 keyword) Job Description attribute**

1551 **8.7 document-state-reasons (1setOf type2 keyword) Document Description attribute**

1552 The REQUIRED "job-state-reasons" and the REQUIRED "document-state-reasons" attributes provide additional
 1553 information about the job's and each document's current state, i.e., information that augments the value of the job's
 1554 "job-state" attribute and each Document's "document-state" attribute, respectively. The Printer SHOULD support the
 1555 same values for both the "job-state-reasons" and the "document-state-reasons" attribute for those attributes that are
 1556 defined for both as indicated in the "Job" and "Doc" columns in Table 11.

1557 These values MAY be used with any job or document state or states for which the reason makes sense. Some of
 1558 these value definitions indicate conformance requirements; the rest are OPTIONAL. Furthermore, when
 1559 implemented, the Printer MUST return these values when the reason applies and MUST NOT return them when the
 1560 reason no longer applies whether the value of the Job's "job-state" attribute or the Document's "document-state"
 1561 attribute changed or not. When the Job or Document does not have any reasons for being in its current state, the
 1562 value of the Job's "job-state-reasons" attribute or Document's "document-state-reasons" attribute MUST be 'none'.

1563 Some of the Job's "job-state-reasons" values affect job scheduling, such as 'resources-are-not-ready' and 'job-hold-
 1564 until-specified'. However, "document-state-reasons" values MUST NOT affect job scheduling, since Document
 1565 objects are passive objects operated on by the containing Job object.

1566 Note: While values cannot be added to the "job-state" or "document-state" attributes without impacting deployed
 1567 clients that take actions upon receiving "job-state" or "document-state" values, it is the intent that additional "job-
 1568 state-reasons" and "document-state-reasons" values can be defined and registered without impacting such deployed
 1569 clients. In other words, the "job-state-reasons" and the "document-state-reasons" attributes are intended to be
 1570 extensible.

1571 Table 11 lists the standard keyword values for the "job-state-reasons" and/or "document-state-reasons" attributes
 1572 defined in this and other IPP specifications as indicated in the References column. In Table 11 the keywords are
 1573 listed in alphabetic order (observing the "[job-]" prefix), while in their descriptions following Table 11, they are listed in
 1574 the most likely order of occurrence to help understanding.

1575 When the Document object is supported, the Printer implementation SHOULD still support the corresponding Job
 1576 level "job-state-reasons", so that clients that do not support the Document object will receive the same information.
 1577 Also it is usually more convenient for the client to obtain just the Job level status. However, the client SHOULD
 1578 query both Job and Document attributes and convert them to some canonical form for display to the user, so that all
 1579 Jobs and their Documents are displayed in a uniform manner, no matter from which clients they were submitted.

Notation:

1581 [job-] indicates a state reason keyword value that has the 'job-' prefix when it is a value of the "job-state-reasons"
 1582 attribute, but does not have the 'job-' prefix when it is a value of the "document-state-reasons" attribute⁴³.
 1583 For purposes of sorting in Table 11, the "[job-]" prefix is observed, since this is an IPP specification.
 1584 "-" indicates that the Job or Document value is *not* defined.

Table 11 - "job-state-reasons" and "document-state-reasons" attribute values

IPP Job Description / Document Description attribute name	IPP Attribute Syntax plus Values	Job	Doc	Printer conformance	Reference
job-state-reasons	1setOf type2 keyword	y	- ⁴⁴	MUST	[RFC2911] §4.3.8
document-state-reasons	1setOf type2 keyword	-	y	MUST	[this spec] §8.7
	aborted-by-system	y	y	MAY	[RFC2911] §4.3.8
	compression-error	y	y	MAY	[RFC2911] §4.3.8
	document-access-error	y	y	MAY	[RFC2911] §4.3.8
	document-format-error	y	y	MAY	[RFC2911] §4.3.8
	[job-]canceled-at-device	y	y	MAY	[RFC2911] §4.3.8
	[job-]canceled-by-operator	y	y	MAY	[RFC2911] §4.3.8
	[job-]canceled-by-user	y	y	MAY	[RFC2911] §4.3.8
	[job-]completed-successfully	y	y	MAY	[RFC2911] §4.3.8
	[job-]completed-with-errors	y	y	MAY	[RFC2911] §4.3.8
	[job-]completed-with-warnings	y	y	MAY	[RFC2911] §4.3.8
	job-data-insufficient	y	-	MAY	[RFC2911] §4.3.8
	job-hold-until-specified	y	-	MAY	[RFC2911] §4.3.8
	[job-]incoming	y	y	MAY	[RFC2911] §4.3.8
	[job-]interpreting	y	y	MAY	[RFC2911] §4.3.8
	[job-]outgoing	y	y	MAY	[RFC2911] §4.3.8
	job-password-wait	y	-	MAY	[prod-print2] §8.3.1
	[job-]printing	y	y	MAY	[RFC2911] §4.3.8
	[job-]queued	y	y	MAY	[RFC2911] §4.3.8
	[job-]queued-for-marker	y	y	MAY	[RFC2911] §4.3.8

⁴³ For the PWG Semantic Model [pwg-sm], the "job-" prefix is being dropped altogether so that the same values can be used for both the JobStateReasons and DocumentStateReasons attributes.

⁴⁴ The Document Description attribute that corresponds to the "job-state-reasons" Job Description attribute is the (new) "document-state-reasons" attribute.

IPP Job Description / Document Description attribute name	IPP Attribute Syntax plus Values	Job	Doc	Printer conformance	Reference
	job-restartable	y	-	MAY	[RFC2911] §4.3.8
	job-resuming	y	-	MAY	[prod-print2] §8.3.1

1586
1587
1588
1589
1590

For ease of understanding, the following value descriptions are presented in the order in which the reasons are likely to occur (if implemented), starting with the 'none' value. Note: The order is improved over that in [RFC2911]. The (JD), (J), and (D) notation is identical to the "Job" and "Doc" columns in Table 11 indicating whether the keyword is defined for the "job-state-reasons" and/or "document-state-reasons" attributes:

1591
1592
1593
1594

1595
1596
1597
1598

1599
1600
1601

1602
1603
1604

- 'none' (JD): There are no reasons for the job's or document's current state. This state reason is semantically equivalent to "job-state-reasons" or "document-state-reasons" attribute without any value and MUST be used when there is no other value, since the 1setOf attribute syntax requires at least one value.
- 'job-hold-until-specified' (J): The value of the job's "job-hold-until" attribute was specified with a time period that is still in the future. The job MUST NOT be a candidate for processing until this reason is removed and there are no other reasons to hold the job. This value SHOULD be supported if the "job-hold-until" Job Template attribute is supported.
- 'job-password-wait' (J): The Job is currently being held until the correct password is entered at the device. If the "job-password" (octetString(255)) Operation attribute (See [prod-print2] section 4.1) is supported, this value MUST be supported.
- 'proof-print-wait' (J): The job is currently being held until the operator verifies the output of the proof print and performs a Release-Job operation. If the "proof-print" (collection) Job Template attribute (See [prod-print2] section 5.9) is supported, this value MUST be supported.

- 1605 **'resources-are-not-supported' (JD):** At least one of the resources needed by the job/document, such as
 1606 media, fonts, resource objects, etc., is not supported on any of the physical printers for which the
 1607 job/document is a candidate. This condition MAY be detected when the job/document is accepted,
 1608 or subsequently while the job/document is pending or processing, depending on implementation.
 1609 The job/document may (1) remain in its current state, (2) be moved to the 'pending-held' state,
 1610 depending on implementation and/or job scheduling policy, or (3) scheduled normally, but the Printer
 1611 is put into the 'stopped' state when the job/document is attempted to be processed on the Printer.
 1612 This value is intended for use with an implementation that supports the "user-defined-values-
 1613 supported" Printer attribute (see [prod-print] section 6.1) which allows a job to be accepted with an
 1614 unsupported 'name' value.
- 1615 **'resources-are-not-ready' (JD):** At least one of the resources needed by the job/document, such as media,
 1616 fonts, resource objects, etc., is not ready on any of the physical printer's for which the job/document
 1617 is a candidate. This condition MAY be detected when the job/document is accepted, or
 1618 subsequently while the job/document is pending or processing, depending on implementation. The
 1619 job/document may remain in its current state or be moved to the 'pending-held' state, depending on
 1620 implementation and/or job/document scheduling policy.
- 1621 **'[job-]incoming' (JD):** Either (1) the Printer has accepted the Create-Job operation and is expecting
 1622 additional Send-Document and/or Send-URI operations or (2) the Printer is retrieving/accepting
 1623 document data as a result of a Print-Job, Print-URI, Send-Document or Send-URI operation.
- 1624 **'[job-]spooling' (JD):** Same as 'job-incoming' with the specialization that the Printer is spooling the
 1625 Job/Document data before processing it. This value corresponds to the 'spool' or 'automatic' value of
 1626 the "job-spooling-supported" Printer Description attribute.
- 1627 **'[job-]streaming' (JD):** Same as 'job-incoming' with the specialization that the Printer is processing the
 1628 Job/Document data as it is being received (that is, the document is not being spooled, but rather is
 1629 being processed in chunks by the output device and is being imaged during reception). This value
 1630 corresponds to the 'stream' or 'automatic' value of the "job-spooling-supported" Printer Description
 1631 attribute.
- 1632 **'job-data-insufficient' (J):** The Create-Job operation has been accepted by the Printer, but the Printer is
 1633 expecting additional document data before it can move the job into the 'processing' state. If a Printer
 1634 starts processing before it has received all data, the Printer removes the 'job-data-insufficient'
 1635 reason, but the 'job-incoming' remains. If a Printer starts processing after it has received all data, the
 1636 Printer removes the 'job-data-insufficient' reason and the 'job-incoming' at the same time.
- 1637 **'unsupported-compression' (JD):** The job/document was aborted by the system because the Printer
 1638 determined while attempting to decompress the document-data's that the compression is actually not
 1639 among those supported by the Printer. This value MUST be supported, since "compressions is a
 1640 REQUIRED operation attribute.
- 1641 **'compression-error' (JD):** The job/document was aborted by the system because the Printer encountered
 1642 an error in the document-data while decompressing it. If the Printer posts this reason, the document-
 1643 data has already passed any tests that would have led to the 'unsupported-compression' job-state-
 1644 reason/document-state-reason.
- 1645 **'document-access-error' (JD):** After accepting a Print-URI or Send-URI request, the Printer could not
 1646 access one or more documents passed by reference. This reason is intended to cover any file
 1647 access problem, including file does not exist and access denied because of an access control
 1648 problem. The Printer MAY also indicate the document access error using the "job-document-access-
 1649 errors" Job Description attribute (see the description of "job-document-access-errors" above).
 1650 Whether the Printer aborts the job/document and moves the job/document to the 'aborted' job state
 1651 or prints all documents that are accessible and moves the job/document to the 'completed'
 1652 job/document state and adds the 'completed-with-errors' value in the job's "job-state-reasons" or
 1653 document's "document-state-reasons" attribute depends on implementation and/or site policy. This
 1654 value SHOULD be supported if the Print-URI or Send-URI operations are supported.

- 1655 **'unsupported-document-format' (JD):** The job/document was aborted by the system because the
 1656 document-data's document-format is not among those supported by the Printer. If the client
 1657 specifies the document-format as 'application/octet-stream', the printer MAY abort the job/document
 1658 and post this reason even though the format is a member of the "document-format-supported" printer
 1659 attribute, but not among the auto-sensed document-formats. This value MUST be supported, since
 1660 "document-format" is a REQUIRED operation attribute.
- 1661 **'document-format-error' (JD):** The job/document was aborted by the system because the Printer
 1662 encountered an error in the document-data while processing it. If the Printer posts this reason, the
 1663 document-data has already passed any tests that would have led to the 'unsupported-document-
 1664 format' job-state-reason/document-state-reason.
- 1665 **'submission-interrupted' (JD):** The job or document was not completely submitted for some unforeseen
 1666 reason, such as: (1) the Printer has crashed before the job was closed by the client, (2) the Printer or
 1667 the document transfer method has crashed in some non-recoverable way before the document data
 1668 was entirely transferred to the Printer, (3) the client crashed or failed to close the job before the time-
 1669 out period. See the description of the "multiple-operation-time-out" Printer attribute in [RFC2911]
 1670 Section 4.4.31.
- 1671 **'[job-]outgoing' (JD):** The Printer is transmitting the job/document to the output device.
- 1672 **'job-scheduling' (J):** The printer is in the process of scheduling the processing for the Job.
- 1673 **'[job-]queued' (JD):** Job is in the 'processing' state, but more specifically, the Printer has queued the
 1674 Document data.
- 1675 **'[job-]transforming' (JD):** Job/document is in the 'processing' state, but more specifically, the Printer is
 1676 interpreting document data and producing another electronic representation.
- 1677 **'[job-]interpreting' (JD):** Job/document is in the 'processing' state, but more specifically, the Printer is
 1678 interpreting the document data.
- 1679 **'[job-]queued-for-marker' (JD):** Job/document is in any of the 'pending-held', 'pending', or 'processing'
 1680 states, but more specifically, the Printer has completed enough processing of the document to be
 1681 able to start marking and the job/document is waiting for the marker. Systems that require human
 1682 intervention to release jobs using the Release-Job operation, put the job into the 'pending-held' job
 1683 state. Systems that automatically select a job to use the marker put the job into the 'pending' job
 1684 state or keep the job in the 'processing' job state while waiting for the marker, depending on
 1685 implementation. All implementations put the job/document into (or back into) the 'processing' state
 1686 when marking does begin.
- 1687 **'[job-]printing' (JD):** The output device is marking media. This value is useful for Printers which spend a
 1688 great deal of time processing (1) when no marking is happening and then want to show that marking
 1689 is now happening or (2) when the job/document is in the process of being canceled or aborted while
 1690 the job/document remains in the 'processing' state, but the marking has not yet stopped so that
 1691 impression or sheet counts are still increasing for the job/document.
- 1692 **'printer-stopped-partly' (J):** The value of the Printer's "printer-state-reasons" attribute contains the value
 1693 'stopped-partly'.
- 1694 **'printer-stopped' (J):** The value of the Printer's "printer-state" attribute is 'stopped'.
- 1695 **'job-suspending' (J):** The printer is in the process of moving the Job from a processing condition to a
 1696 suspended condition where other jobs can be processed.
- 1697 **'job-suspended' (J):** The job has been suspended while processing using the Suspend-Current-Job
 1698 operation and other jobs can be processed on the Printer. The Job can be resumed using the
 1699 Resume-Job operation which removes this value. Note: Documents cannot be suspended and there
 1700 is no Suspend-Current-Documents operation.
- 1701 **'job-suspended-by-operator' (J):** The Job has been indefinitely suspended by the printer operator.

- 1702 **'job-suspended-by-user' (J)**: The Job has been indefinitely suspended by the user.
- 1703 **'job-suspended-by-system' (J)**: The Job has been indefinitely suspended by the Printer's system software
1704 during normal processing of the job.
- 1705 **'job-resuming' (J)**: The printer is in the process of moving the Job from a suspended condition to become a
1706 candidate for processing.
- 1707 **'[job-]canceled-by-user' (JD)**: The job/document was canceled by the owner of the job using the Cancel-
1708 Job/Cancel-Document request, i.e., by a user whose authenticated identity is the same as the value
1709 of the originating user that created the Job object, or by some other authorized end-user, such as a
1710 member of the job owner's security group. This 'job-canceled' value SHOULD be supported. The
1711 'canceled-by-user' value SHOULD be supported for the "document-state-reasons" attributes for use
1712 with the Cancel-Document.
- 1713 **'[job-]canceled-by-operator' (JD)**: The job/document was canceled by the operator using the Cancel-
1714 Job/Cancel-Document request, i.e., by a user who has been authenticated as having operator
1715 privileges (whether local or remote). If the security policy is to allow anyone to cancel anyone's
1716 job/document, then these values may be used when the job/document is canceled by other than the
1717 owner of the job. For such a security policy, in effect, everyone is an operator as far as canceling
1718 jobs/documents is concerned. These values SHOULD be supported if the implementation permits
1719 canceling by other than the owner of the job.
- 1720 **'[job-]canceled-at-device' (JD)**: The job/document was canceled by an unidentified local user, i.e., a user
1721 at a console at the device. This value SHOULD be supported if the implementation supports
1722 canceling jobs/documents at the console.
- 1723 **'aborted-by-system' (JD)**: The job/document (1) is in the process of being aborted, (2) has been aborted by
1724 the system and placed in the 'aborted' state, or (3) has been aborted by the system and placed in the
1725 'pending-held' state, so that a user or operator can manually try the job/document again. This value
1726 SHOULD be supported.
- 1727 **'processing-to-stop-point' (J)**: The requester has issued a Cancel-Job/Cancel-Document operation or the
1728 Printer object has aborted the job/document, but is still performing some actions on the job/document
1729 until a specified stop point occurs or job/document termination/cleanup is completed.
1730 If the implementation requires some measurable time to cancel the job/document in the 'processing'
1731 or 'processing-stopped' job/document states, the Printer MUST use this value to indicate that the
1732 Printer object is still performing some actions on the job/document while the job/document remains in
1733 the 'processing' or 'processing-stopped' state. After all the job's/document's job/document
1734 description attributes have stopped incrementing, the Printer object moves the job/document from
1735 the 'processing' state to the 'canceled' or 'aborted' job/document states.
- 1736 **'service-off-line' (J)**: The Printer is off-line and accepting no jobs. All 'pending' jobs are put into the
1737 'pending-held' state. This situation could be true if the service's or document transform's input is
1738 impaired or broken.
- 1739 **'[job-]warnings-detected' (JD)**: If the Printer supports these values, the Printer MUST add the value to "job-
1740 state-reasons" / "document-state-reasons" when it generates the first warning message. That is, a
1741 single occurrence of this value is present in the "job-state-reasons" / "document-state-reasons" if the
1742 Printer has generated one or more warnings.
- 1743 **'[job-]completed-successfully' (JD)**: The job/document completed successfully. There were no warnings
1744 or errors in printing. This value SHOULD be supported.
- 1745 **'[job-]completed-with-warnings' (JD)**: The print part of the job/document completed with warnings
1746 (whether or not there were save errors). This value SHOULD be supported if the implementation
1747 detects warnings. [RFC2911]
- 1748 **'[job-]completed-with-errors' (JD)**: The print part of the job/document completed with errors (and possibly
1749 warnings too) (whether or not there were save errors). This value SHOULD be supported if the
1750 implementation detects errors. [RFC2911]

- 1751 **'job-saving' (J):** The Printer is transmitting the Job to the save location. This is similar to the 'job-printing'
1752 value.
- 1753 **'job-saved-successfully' (J):** The Printer saved the Job successfully.
- 1754 **'job-save-error' (J):** The Printer did not save the Job successfully (whether or not it was printed successfully,
1755 printed with warnings, printed with errors, or not printed). The Printer **MUST** ensure that none of the
1756 saved job is accessible, if it was unable to successfully save all of the job.
- 1757 **'job-restartable' (J):** This job is retained (see the description of "job-state" above, specifically "Partitioning of
1758 Job States") and is currently able to be restarted using the Restart-Job operation (see [RFC2911]
1759 Section 3.3.7). If 'job-restartable' is a value of the job's "job-state-reasons" attribute, then the Printer
1760 **MUST** accept a Restart-Job operation for that job. This value **SHOULD** be supported if the Restart-
1761 Job operation is supported.
- 1762 **'queued-in-device' (JD):** The job/document has been forwarded to a device or print system that is unable to
1763 send back status. The Printer sets the job's/document's "job-state" / "document-state" attribute to
1764 'completed' and adds the 'queued-in-device' value to the job's/document's "job-state-reasons" /
1765 "document-state-reasons" attribute to indicate that the Printer has no additional information about the
1766 job/document and never will have any better information. See the description of the "job-state" /
1767 "document-state" attribute above, specifically the portion on "Forwarding Servers".
- 1768 NOTE: The semantics of this attribute or the set of valid values may be different for different document formats.

1769 **8.8 job-state-message (text(MAX)) Job Description attribute**

1770 **8.9 document-state-message (text(MAX)) Document Description attribute**

1771 This OPTIONAL attribute specifies information about the "job-state"/"document-state" and "job-state-
1772 reasons"/"document-state-reasons" attributes in human readable text. If the Printer object supports this attribute, the
1773 Printer object **MUST** be able to generate this message in any of the natural languages identified by the Printer's
1774 "generated-natural-language-supported" attribute (see the "attributes-natural-language" operation attribute specified
1775 in [RFC2911] Section 3.1.4.1).

1776 The value **SHOULD NOT** contain additional information not contained in the values of the "job-state" and "job-states-
1777 reasons" attributes, such as interpreter error information. Otherwise, application programs might attempt to parse the
1778 (localized text). For such additional information such as interpreter errors for application program consumption or
1779 specific document access errors, new attributes with keyword values, needs to be developed and registered.

1780 **8.10 document-message (text(127)) Document Description**

1781 **ISSUE 02:** Should the "document-message" Document Description attribute have a maximum of 127 octets, like the
1782 "job-message-from-operator" (text(127)) Job Description attribute in [RFC2911] section 4.3.16 or MAX (1023 octets)
1783 like "job-message-to-operator" (text(MAX)) Job Template attribute in IEEE-ISTO 5100.3 [prod-print] section 3.10?

1784 This OPTIONAL Document Description contains a message from the user to the operator or a message from the
1785 operator or administrator system administrator or "intelligent" process to indicate to the end user the reasons for
1786 modification or other management action taken on the Document. The Printer populates this Document Description
1787 attribute from the "document-message" (text(127)) operation attribute value supplied by the client in any of the
1788 Document Creation operations (see section 3.1.1) or in a Cancel-Document or Cancel-Current-Document operations
1789 (see sections 3.9 or 3.10). In addition, the user and the operator can set the value of this Document Description
1790 attribute explicitly using the Set-Document-Attributes operation (see section 3.8).

1791 **8.11 document-printer-up-time (integer(1:MAX))**

Document Description

1792 This REQUIRED Document Description attribute indicates the amount of time (in seconds) that the Printer
 1793 implementation has been up and running. This attribute is an alias for the "printer-up-time" Printer Description
 1794 attribute (see [RFC2911] section 4.4.29).

1795 A client MAY request this attribute in a Get-Document-Attributes or Get-Documents request and use the value
 1796 returned in combination with other requested Event Time Job Description Attributes in order to display time attributes
 1797 to a user. The difference between this attribute and the 'integer' value of a "time-at-xxx" attribute is the number of
 1798 seconds ago that the "time-at-xxx" event occurred. A client can compute the wall-clock time at which the "time-at-
 1799 xxx" event occurred by subtracting this difference from the client's wall-clock time.

1800 **ISSUE 03:** The following 4 Job Creation operation attributes have corresponding Job Description attributes, but
 1801 there isn't a definition or an IANA Registration for any of these Job Description attributes: "ipp-attribute-fidelity", "job-
 1802 mandatory-attributes", "job-password", and "job-password-encryption". OK to add Job Description attribute
 1803 descriptions for each of them? That would correspond to the PWG Semantic Model where they are Job Description
 1804 attributes.

1805 **ISSUE 04 repeat:** The following 4 Job Creation operation attributes have corresponding Job Description attributes,
 1806 since they are really Document attributes: "compression", "document-format", "document-name", "document-natural-
 1807 language"? OK to add Document Description attribute descriptions for each of them? That would correspond to the
 1808 PWG Semantic Model where they are Document Description attributes.

1809 **ISSUE 05:** The Printer copies the following 11 Document Creation operation attributes to corresponding Document
 1810 Description attributes, but there isn't a definition or an IANA Registration for any of these Document Description
 1811 attributes: "attributes-charset", "attributes-natural-language", "compression", "document-format", "document-name",
 1812 "document-natural-language", "impressions", "k-octets", "media-sheets", "job-printer-uri", and "last-document". OK to
 1813 add operation attribute and Document Description attribute descriptions for each of them?

1814 **ISSUE 06:** The definitions of the following 16 remaining Document Description attributes are derived from the
 1815 corresponding Job Description attributes that are not set by the client: "current-page-order", "date-time-at-
 1816 completed", "date-time-at-creation", "date-time-at-processing", "detailed-status-message", "document-access-errors",
 1817 "impressions-completed", "impressions-completed-current-copy", "k-octets-processed", "media-sheets-completed",
 1818 "more-info", "sheet-completed-copy-number", "time-at-completed", "time-at-creation", "time-at-processing", and
 1819 "warnings-count", OK to add Document Description attribute descriptions for each of them?

1820 **9 Printer attributes**

1821 This section lists *all* of the Printer attributes defined in other IPP documents. Printer attributes are divided into three
 1822 disjoint groups:
 1823

Job Template attributes (JT)	These Printer attributes are related directly to the "xxx" Job Template attributes that a client can supply in a Job Creation request as follows: 1. "xxx-supported" indicate the supported values 2. "xxx-default" indicate the values that will be used if the client and the PDL omit the attribute. 3. "xxx-ready" indicate the supported values that are available without human intervention, for those few attributes that require human intervention, such as "media" and possibly "finishing".
Printer Description attributes (PD)	These Printer attributes describe the Printer, such as "printer-name" and "printer-location". Some of them are "xxx-supported" and "xxx-default" for Operation attributes that the client can supply in a Job Creation request.
neither (-)	These Printer attributes describe supported and defaults for member attributes of

	collection Job Template attributes.
--	-------------------------------------

1824
1825
1826
1827

In a Get-Printer-Attributes request, a client can request all of the Printer attributes in the Job Template (JT) or Printer Description (PD) groups by supplying the 'job-template' or 'printer-description' group name, respectively. The client can also request "all". The column labels are:

1828
1829
1830
1831
1832

“Attribute Syntax” - indicates the attribute syntax (see [RFC2911] section 4.1). Many “xxx-default” and “xxx-supported” attributes have the ‘collection’ syntax which consists of a number of member attributes. These member attributes are not listed in this table when they are the same as the corresponding “xxx” attribute in Table 8. Only those few Printer attribute collection attributes that do not have a corresponding Job Template attributes show the member attributes in this table.

1833

“Grp” - indicates to which group the attribute belongs.

1834
1835
1836
1837
1838
1839
1840

“Printer Conf.” - indicates the IPP/1.1 Printer conformance requirements for supporting the attribute. Those attributes labeled as “MAY” may have conditional requirements that require their support, if the Printer supports a related attribute, operation, or feature. For example, all Job Template attributes are OPTIONAL for a Printer to support. However, if a Printer supports Job Template attribute “xxx”, then it MUST also support the corresponding “xxx-default” and “xxx-supported” attributes. Similarly, if Event Notification is supported, then some of the attributes indicated as “MAY” in this table become MUST.

1841

“Reference” - lists the IETF or IEEE-ISTO specification which defines the semantics of the attribute.

1842

Table 12 - Printer attributes (Job Template and Printer Description)

Printer attribute name (Job Template & Printer Description)	Attribute Syntax	Grp	Printer Conf.	Reference
charset-configured	charset	PD	MUST	[RFC2911] §4.4.17
charset-supported	1setOf charset	PD	MUST	[RFC2911] §4.4.18
color-supported	boolean	PD	MAY	[RFC2911] §4.4.26
compression-supported	type3 keyword	PD	MUST	[RFC2911] §4.4.32
copies-default	integer(1:MAX)	JT	MAY	[RFC2911] §4.2.5
copies-supported	rangeOfInteger(1:MAX)	JT	MAY	[RFC2911] §4.2.5
cover-back-default	collection	JT	MAY	[prod-print] §3.1.3
cover-back-supported	1setOf type2 keyword	JT	MAY	[prod-print] §3.1.4
cover-front-default	collection	JT	MAY	[prod-print] §3.1.3
cover-front-supported	1setOf type2 keyword	JT	MAY	[prod-print] §3.1.4
cover-type-supported	1setOf type2 keyword	-	MAY	[prod-print] §3.1.2.1
document-creation-attributes-supported	1setOf type2 keyword	PD	MAY	[this-spec] §9.1
document-format-default	mimeMediaType	PD	MUST	[RFC2911] §4.4.21
document-format-supported	1setOf mimeMediaType	PD	MUST	[RFC2911] §4.4.22
document-format-varying-attributes	1setOf type2 keyword	PD	MAY	[set-ops] §6.3
document-overrides-supported	1setOf type2 keyword		MAY	[override] §5.1.14
finishings-col-default	collection	JT	MAY	[prod-print] §3.2.3
finishings-col-ready	1setOf collection	JT	MAY	[prod-print] §3.2.4
finishings-col-supported	1setOf type2 keyword	JT	MAY	[prod-print] §3.2.5
finishings-default	1setOf type2 enum	JT	MAY	[RFC2911] §4.2.6
finishings-ready	1setOf type2 enum	JT	MAY	[RFC2911] §4.2.6
finishings-supported	1setOf type2 enum	JT	MAY	[RFC2911] §4.2.6
finishing-template-supported	1setOf name(MAX)	-	MAY	[prod-print] §3.2.1.1
force-front-side-default	1setOf integer(1:MAX)	JT	MAY	[prod-print] §3.3
force-front-side-supported	rangeOfInteger(1:MAX)	JT	MAY	[prod-print] §3.3
generated-natural-language-	1setOf naturalLanguage	PD	MUST	[RFC2911] §4.4.20

Printer attribute name (Job Template & Printer Description)	Attribute Syntax	Grp	Printer Conf.	Reference
supported				
imposition-template-default	type3 keyword name(MAX)	-	MAY	[prod-print] §3.4
imposition-template-supported	1setOf (type3 keyword name(MAX))	-	MAY	[prod-print] §3.4
insert-after-page-number-supported	rangeOfInteger(0:MAX)	-	MAY	[prod-print] §3.5.1.1
insert-count-supported	rangeOfInteger(0:MAX)	-	MAY	[prod-print] §3.5.2.1
insert-sheet-default	1setOf collection	JT	MAY	[prod-print] §3.5.4
insert-sheet-supported	1setOf type2 keyword	JT	MAY	[prod-print] §3.5.5
ippget-event-life	integer(15:MAX)	PD	MAY	[get-method] §8.1
ipp-versions-supported	1setOf type2 keyword	PD	MUST	[RFC2911] §4.4.20
job-account-id-default	name(MAX)	JT	MAY	[prod-print] §3.6
job-account-id-supported	boolean	JT	MAY	[prod-print] §3.6
job-accounting-output-bin-default	type3 keyword name(MAX)	-	MAY	[prod-print] §3.8.3.1
job-accounting-output-bin-supported	1setOf (type3 keyword name(MAX))	-	MAY	[prod-print] §3.8.3.2

1843

1844 **9.1 document-creation-attributes-supported (1setOf type2 keyword)**

1845 This Printer Description attribute lists the keyword names of the Document Template and Operation attributes that
 1846 the Printer will accept in the Create-Document, Send-Document, and Send-URI Document Creation operations.

1847 **9.2 printer-state-reasons (1setOf type2 keyword)**

IPP Printer Description attribute name	IPP Attribute Syntax plus Values	Printer conformance	Reference
printer-state-reasons	1setOf type2 keyword	MUST	[RFC2911] §4.4.12
	other	MAY	[RFC2911] §4.4.12
	none	MUST	[RFC2911] §4.4.12

	timed-out	MAY	[RFC2911] §4.4.12
	toner-empty	MAY	[RFC2911] §4.4.12

⁴⁶ The 'moving-to-paused' value MUST be supported if the Pause-Printer operation is supported and it takes significant time to move to paused.

⁴⁷ The 'paused' value MUST be supported if the Pause-Printer operation is supported.

IPP Printer Description attribute name	IPP Attribute Syntax plus Values	Printer conformance	Reference
	toner-low	MAY	[RFC2911] §4.4.12

1848

1849 This description is taken from [RFC2911] with additions from other IPP extension documents:

1850 This REQUIRED Printer attribute supplies additional detail about the device's state. Some of these value
 1851 definitions indicate conformance requirements; the rest are OPTIONAL.

1852 Each keyword value MAY have a suffix to indicate its level of severity. The three levels are: report (least severe),
 1853 warning, and error (most severe).

1854 **'-report'**: This suffix indicates that the reason is a "report". An implementation may choose to omit some or
 1855 all reports. Some reports specify finer granularity about the printer state; others serve as a precursor
 1856 to a warning. A report MUST contain nothing that could affect the printed output.

1857 **'-warning'**: This suffix indicates that the reason is a "warning". An implementation may choose to omit some
 1858 or all warnings. Warnings serve as a precursor to an error. A warning MUST contain nothing that
 1859 prevents a job from completing, though in some cases the output may be of lower quality.

1860 **'-error'**: This suffix indicates that the reason is an "error". An implementation MUST include all errors. If this
 1861 attribute contains one or more errors, printer MUST be in the stopped state.

1862 If the implementation does not add any one of the three suffixes, all parties MUST assume that the reason is an
 1863 "error".

1864 If a Printer object controls more than one output device, each value of this attribute MAY apply to one or more of the
 1865 output devices. An error on one output device that does not stop the Printer object as a whole MAY appear as a
 1866 warning in the Printer's "printer-state-reasons attribute". If the "printer-state" for such a Printer has a value of
 1867 'stopped', then there MUST be an error reason among the values in the "printer-state-reasons" attribute.

1868 The following standard keyword values are defined (in alphabetical order):

1869 **'other'**: The device has detected an error other than one listed in this document.

1870 **'none'**: There are not reasons. This state reason is semantically equivalent to "printer-state-reasons" without
 1871 any value and MUST be used, since the 1setOf attribute syntax requires at least one value.

1872 **'connecting-to-device'**: The Printer object has scheduled a job on the output device and is in the process of
 1873 connecting to a shared network output device (and might not be able to actually start printing the job
 1874 for an arbitrarily long time depending on the usage of the output device by other servers on the
 1875 network).

1876 **'cover-open'**: One or more covers on the device are open.

1877 **'deactivated'**: A client has issued a Deactivate-Printer operation for the Printer object (see [adm-ops]
 1878 section 3.4.1) and the Printer is in the process of becoming deactivated or has become deactivated.
 1879 The Printer MUST reject all requests except Activate-Printer, queries (Get-Printer-Attributes, Get-
 1880 Job-Attributes, Get-Jobs, etc.), Send-Document, and Send-URI (so that partial job submission can
 1881 be completed - see [adm-ops] section 3.1.1) and return the 'server-error-service-unavailable' status
 1882 code.

1883 **'developer-empty'**: The device is out of developer.

1884 **'developer-low'**: The device is low on developer.

- 1885 **'door-open'**: One or more doors on the device are open.
- 1886 **'fuser-over-temp'**: The fuser temperature is above normal.
- 1887 **'fuser-under-temp'**: The fuser temperature is below normal.
- 1888 **'hold-new-jobs'**: The operator has issued the Hold-New-Jobs operation (see [adm-ops] section 3.3.1) or
1889 other means, but the output-device(s) are taking an appreciable time to stop. Later, when all output
1890 has stopped, the "printer-state" becomes 'stopped', and the 'paused' value replaces the 'moving-to-
1891 paused' value in the "printer-state-reasons" attribute. This value MUST be supported, if the Hold-
1892 New-Jobs operation is supported and the implementation takes significant time to pause a device in
1893 certain circumstances.
- 1894 **'input-tray-missing'**: One or more input trays are not in the device.
- 1895 **'interlock-open'**: One or more interlock devices on the printer are unlocked.
- 1896 **'interpreter-resource-unavailable'**: An interpreter resource is unavailable (i.e. font, form)
- 1897 **'marker-supply-empty'**: The device is out of at least one marker supply. (e.g. toner, ink, ribbon)
- 1898 **'marker-supply-low'**: The device is low on at least one marker supply. (e.g. toner, ink, ribbon)
- 1899 **'marker-waste-almost-full'**: The device marker supply waste receptacle is almost full.
- 1900 **'marker-waste-full'**: The device marker supply waste receptacle is full.
- 1901 **'media-empty'**: At least one input tray is empty.
- 1902 **'media-jam'**: The device has a media jam.
- 1903 **'media-low'**: At least one input tray is low on media.
- 1904 **'media-needed'**: A tray has run out of media.
- 1905 **'moving-to-paused'**: Someone has paused the Printer object using the Pause-Printer operation (see
1906 [RFC2911] section 3.2.7) or other means, but the device(s) are taking an appreciable time to stop.
1907 Later, when all output has stopped, the "printer-state" becomes 'stopped', and the 'paused' value
1908 replaces the 'moving-to-paused' value in the "printer-state-reasons" attribute. This value MUST be
1909 supported, if the Pause-Printer operation is supported and the implementation takes significant time
1910 to pause a device in certain circumstances.
- 1911 **'opc-life-over'**: The optical photo conductor is no longer functioning.
- 1912 **'opc-near-eol'**: The optical photo conductor is near end of life.
- 1913 **'output-area-almost-full'**: One or more output area is almost full (e.g. tray, stacker, collator).
- 1914 **'output-area-full'**: One or more output area is full. (e.g. tray, stacker, collator)
- 1915 **'output-tray-missing'**: One or more output trays are not in the device
- 1916 **'paused'**: Someone has paused the Printer object using the Pause-Printer operation (see [RFC2911] section
1917 3.2.7) or other means and the Printer object's "printer-state" is 'stopped'. In this state, a Printer
1918 MUST NOT produce printed output, but it MUST perform other operations requested by a client. If a
1919 Printer had been printing a job when the Printer was paused, the Printer MUST resume printing that
1920 job when the Printer is no longer paused and leave no evidence in the printed output of such a
1921 pause. This value MUST be supported, if the Pause-Printer operation is supported.
- 1922 **'shutdown'**: Someone has removed a Printer object from service, and the device may be powered down or
1923 physically removed. In this state, a Printer object MUST NOT produce printed output, and unless the
1924 Printer object is realized by a print server that is still active, the Printer object MUST perform no other
1925 operations requested by a client, including returning this value. If a Printer object had been printing a
1926 job when it was shutdown, the Printer NEED NOT resume printing that job when the Printer is no
1927 longer shutdown. If the Printer resumes printing such a job, it may leave evidence in the printed

1928 output of such a shutdown, e.g. the part printed before the shutdown may be printed a second time
 1929 after the shutdown.

1930 **'spool-area-full'**: The limit of persistent storage allocated for spooling has been reached. The Printer is
 1931 temporarily unable to accept more jobs. The Printer will remove this value when it is able to accept
 1932 more jobs. This value SHOULD be used by a non-spooling Printer that only accepts one or a small
 1933 number jobs at a time or a spooling Printer that has filled the spool space.

1934 **'stopped-partly'**: When a Printer object controls more than one output device, this reason indicates that one
 1935 or more output devices are stopped. If the reason is a report, fewer than half of the output devices
 1936 are stopped. If the reason is a warning, fewer than all of the output devices are stopped.

1937 **'stopping'**: The Printer object is in the process of stopping the device and will be stopped in a while. When
 1938 the device is stopped, the Printer object will change the Printer object's state to 'stopped'. The
 1939 'stopping-warning' reason is never an error, even for a Printer with a single output device. When an
 1940 output-device ceases accepting jobs, the Printer will have this reason while the output device
 1941 completes printing.

1942 **'timed-out'**: The server was able to connect to the output device (or is always connected), but was unable to
 1943 get a response from the output device.

1944 **'toner-empty'**: The device is out of toner.

1945 **'toner-low'**: The device is low on toner.

1946 **10 New Values for Existing Printer Description Attributes**

1947 This section contains those attributes for which additional values are added.

1948 **10.1 operations-supported (1setOf type2 enum)**

1949 The following "operation-id" values are added in order to support the new operations defined in this document:

1950 **Table 13 – Operation-id assignments**

Value	Operation Name	Reference
0x0032	Cancel-Current-Document	[this-spec] §3.10
0x0033	Cancel-Document	[this-spec] §3.9
0x0034	Get-Document-Attributes	[this-spec] §3.5
0x0035	Get-Documents	[this-spec] §3.7
0x0036	Delete-Document	[this-spec] §3.11
0x0037	Set-Document-Attributes	[this-spec] §3.8
0x0038	Validate-Document	[this-spec] §3.5
0x0039	Create-Document	[this-spec] §3.1
0x003A	Send-Data	[this-spec] §3.2

1951 **11 Conformance Requirements**

1952 This section specifies the conformance requirements for Printers and clients.

1953 **11.1 Printer conformance requirements**

1954 In order to conform to this specification, a Printer:

- 1955 1. MUST meet the conformance requirements for Printers specified in [RFC2911].
- 1956 2. MUST support the Document operations that section 3 REQUIRES a Printer to support.
- 1957 3. MUST support the operation attributes in the Send-Document operation and, if supported, the Send-URI
1958 operation that section 6 REQUIRES a Printer to support.
- 1959 4. MAY support any of the Document Template attributes in Document Creation operations as indicated in
1960 section 7 and MUST NOT support them for contexts for where they are not defined as indicated in the Table
1961 9 with an "n".
- 1962 5. MUST support the Document Description attributes that section 8 REQUIRES a Printer to support.
- 1963 6. MUST support the Printer attributes that section 8.11 REQUIRES a Printer to support.
- 1964 7. MUST support the values of Printer Descriptions attribute that section 10 REQUIRES a Printer to support.

1965 11.2 Client conformance requirements

1966 In order to conform to this specification, a client:

- 1967 1. MUST meet the conformance requirements for clients specified in [RFC2911]
- 1968 2. MAY support any of the Document operations defined in section 3.
- 1969 3. MUST supply the operation attributes that section 6 REQUIRES a client to supply in operation requests.
- 1970 4. MUST supply any Document Template attributes in the format that section 7 REQUIRES a client to supply in
1971 Document Creation operations and MUST NOT support them for contexts for where they are not defined as
1972 indicated in the Table 9 with an "n".
- 1973 5. SHOULD support any of the Document Description attributes that section 8 REQUIRES a Printer to support.
- 1974 6. MAY support any of the Printer attributes listed in section 8.11.
- 1975 7. MAY support any of the values of the Printer Descriptions attributes in section 10.

1976 12 Normative References

1977 Note: The references in the body of this IEEE-ISTO document use the more reader-friendly mnemonic symbols
1978 below, rather than the RFC number (except for [RFC2910] and [RFC2911]). IETF RFCs and IANA registrations
1979 require using the RFC numbers in the body of the document for references.

2054 **14 IANA Considerations**

2055 This section contains the registration information for IANA to add to the various IPP Registries according to the
 2056 procedures defined in RFC 2911 [RFC2911] section 6 to cover the definitions in this document. The resulting
 2057 registrations will be published in the <http://www.iana.org/assignments/ipp-registrations> registry.

2058 *Note to the RFC Editor: Replace the References below with the RFC number for the appropriate document,*
 2059 *so that it accurately reflects the content of the information for the IANA Registry.*

2060 **14.1 Attribute Registrations**

2061 The following table lists all the attributes defined in this document. These are to be registered according to the
 2062 procedures in RFC 2911 [RFC2911] section 6.2.

Attribute Name (attribute syntax):	Reference:	Section:
Document Description attributes:	Reference:	Section:
attributes-charset (charset)	[RFC2911]	4.3.19
attributes-natural-language (naturalLanguage)	[RFC2911]	4.3.20
compression (type3 keyword)	[RFC2911]	3.2.1.1
current-page-order (type2 keyword)	[prod-print]	4.1
date-time-at-completed (dateTime)	[RFC2911]	4.3.14.7
date-time-at-creation (dateTime)	[RFC2911]	4.3.14.5
date-time-at-processing (dateTime)	[RFC2911]	4.3.14.6
detailed-status-message (1setOf text (MAX))	[RFC2911]	4.3.10
document-access-errors (1setOf text(MAX))	[RFC2911]	4.3.11
document-format (documentFormat)	[RFC2911]	3.2.1.1
document-id-uri (uri)	[this spec]	8.2
document-message (text(127))	[this spec]	8.10
document-name (name(MAX))	[RFC2911]	3.2.1.1

2243	Send-Data	[this-spec]	§3.2
2244			

2245 **15 Internationalization Considerations**

2246 The internationalization considerations for this extension for handling the Document object are the same as for
 2247 handling the Job object in [RFC2911].

2248 **16 Security Considerations**

2249 The Document object should provide no more increased security considerations than the Job object. The Printer
 2250 MUST provide the same access control for Document objects as for Job objects.

2277 20 Appendix A: Document operations compared to Job operations

2278 This appendix compares the Document operations with the existing Job operations to show the parallelism.

2279 Table 14 compares the Job and Document operations. The two Conf. columns indicate the conformance
 2280 requirements (REQUIRED = REQ, OPTIONAL = OPT) for the Job and Document operations respectively. A "REQ"
 2281 in the Document Conformance column means if the Document object is supported. Whether a Document operation
 2282 is a method on the Job object or the Document object depends on the modeling regime and is not an essential part
 2283 of the semantics described here, since these semantics are intended to apply to both to object-oriented and object-
 2284 based protocols, APIs, and implementations.

2285 **Table 14 - Document operations compared to Job operations**

Job operations	Job Conf.	Document operations	Doc Conf
Cancel-Current-Job	OPT	Cancel-Current-Document	OPT
Cancel-Job	REQ	Cancel-Document	REQ
Create-Job	OPT	Create-Document	REQ
Get-Job-Attributes	REQ	Get-Document-Attributes	REQ
Get-Jobs	REQ	Get-Documents	REQ
Hold-Job		<i>N/A, can only hold an entire job.</i>	
Print-Job	REQ	Send-Document (existing operation - see [RFC2911] with an additional Document attributes group defined in section 3.3)	REQ ⁴⁸
Print-URI	OPT	Send-URI (existing operation - see [RFC2911] with an additional Document attributes group defined in section 3.4)	OPT
<i>N/A</i>		Send-Data	REQ
Promote-Job	OPT	<i>N/A, can only promote an entire job</i>	
Purge-Jobs	OPT	Delete-Document	OPT
Release-Held-New-Jobs	OPT	<i>N/A, can only release entire jobs</i>	
Release-Job	OPT	<i>N/A, can only release an entire job</i>	
Reprocess-Job	OPT	<i>N/A, can only reprocess an entire job</i>	
Restart-Job	OPT	<i>N/A, can only restart an entire job</i>	
Resume-Job	OPT	<i>N/A, can only resume an entire job</i>	
Schedule-Job-After	OPT	<i>N/A, can only schedule an entire job</i>	
Set-Job-Attributes	OPT	Set-Document-Attributes	OPT
Suspend-Current-Job	OPT	<i>N/A, can only suspend an entire job in order to run another one</i>	
Validate-Job	REQ	Validate-Document	REQ

2286
 2287

⁴⁸ The Send-Document operation is OPTIONAL for a Printer to conform to [RFC2911], but is REQUIRED for a Printer to conform to this Document object specification.

2288 **21 Annex B: Change Log (informative)**

2289 Version 0.5, 25 October 2002, as a result of the PWG Semantic Model telecon, October 24, 2002:

- 2290 1. Fixed the title to say "Proposed Standard" and removed the 5100.n number until the document is approved
 2291 by the PWG Last Call to progress as a Draft Standard.
 2292 2. Changed Cancel-Document from OPTIONAL to REQUIRED.
 2293 3. Added Table 3 and Table 4 to show the request and response signatures of the Document Creation and
 2294 Validation operations.
 2295 4. Renamed the "document-number" operation attribute to "input-document-number", to agree with [override]
 2296 and because the Document object is really the Input Document (as opposed to the Output Document). The
 2297 Printer copies this value to the Document's "document-number" Document Description attribute.
 2298 5. Clarified that the Printer MUST reject a Create-Document request if the "document-number" already exists.
 2299 6. Clarified that the client cannot supply Subscription attributes in any Document Creation requests.
 2300 7. Added "document-message" (text(127)) operation attribute to the Document Creation requests to go with the
 2301 "document-message" agreement (see point #15).
 2302 8. Fixed Create-Document response to return Job status attributes in Group 3 and Document status attributes
 2303 in Group 4.
 2304 9. Required the Printer to return just the "document-number" and "document-id-uri" (uri) Document Description
 2305 attribute in a Document Creation response.
 2306 10. Added the "document-mandatory-attributes" operation attribute.
 2307 11. Separated the returned Job status attributes and the Document status attributes into two groups, one Job
 2308 Attributes and the other Document attributes.
 2309 12. Allowed the client to supply or omit the "document-uri" operation attribute in a Validate-Job request.
 2310 13. Clarified that the "document-number" operation attribute MUST follow the Printer and Job Target in Group 1.
 2311 14. Changed the Get-Documents response when there is no "requested-attributes" to simply "document-number"
 2312 and "document-id-uri" to be parallel with the Get-Jobs operation.
 2313 15. Changed the "message" operation attribute in Cancel-Document and Cancel-Current-Document to
 2314 "document-message" operation attribute which the Printer copies to the "document-message" Document
 2315 Description attribute for use both by the user and the operator.
 2316 16. Clarified that the "document-state-reasons" values never affect Job scheduling.
 2317 17. Made Job Level - page override programming higher precedence than Document level Document object
 2318 attributes.
 2319 18. Clarified PDL document data precedence and its relationship to Job Template attributes ending with "-
 2320 requested".
 2321 19. In Table 6, flagged the operation attributes that the Printer copies to the corresponding Job and Document
 2322 Description attributes in Document Creations operations.
 2323 20. Fixed "job-mandatory-attributes" operation attribute so its only supplied at Job level, now that we have
 2324 "document-mandatory-attributes" operation attribute.
 2325 21. Clarified that "ipp-attribute-fidelity" can be supplied at both the Job and Document Levels and how it interacts
 2326 with "job-mandatory-attributes" and "document-mandatory-attributes" operation attributes.
 2327 22. Disallowed "output-bin" at the Document Level (and Page Level). It subsets the single stream of Input-Pages
 2328 across Input-Documents.
 2329 23. Disallowed "page-ranges" at the Page Level.
 2330 24. Disallowed "pages-per-subset" at the Document level (and Page Level).
 2331 25. Disallowed "separator-sheets" at the Page Level.
 2332 26. Added "document-printer-up-time" Document Description attribute for Get-Documents and Get-Document-
 2333 Attributes responses that the Printer MUST support, just like "job-printer-up-time" operation attribute for Get-
 2334 Jobs and Get-Job-Attributes.
 2335

2336 Version 0.4, 14 October 2002:

- 2337 1. Added the operation specifications.
 2338 2. Added the Create-Document and Send-Data to be more parallel with Jobs and support PWG PSI.
 2339 3. Resolved the 15 issues in version 0.3 as discussed on the mailing list.
 2340 4. Added the Attribute Precedence section 5.
 2341 5. Added [prod-print2] attributes.

- 2342 6. Added job-mandatory-attributes, job-cover-back, job-cover-front, job-copies, job-finishings, job-finishings-col.
2343 document-id-uri, and redirect-uri.
2344

2345 Version 0.3, 9 September 2002:

- 2346 1. Reformatted as an IEEE-ISTO standard and added the usual sections for a standard.
2347 2. Added "original-requesting-user-name" Operation attribute to Table 6.
2348 3. Added "y" to "output-bin" in Table 8 so it MAY be a Document Template attribute.
2349 4. Clarified the * and ** in Table 9 - Job and Document Description attributes.
2350 5. Added section 8.11 all of the Printer attributes defined In any IPP standard.
2351 6. Allocated operation-id enums in section 10 to the 7 Document operations.
2352 7. Added the conformance section 11
2353 8. Completed the IANA Considerations section 14.
